#### PREFACE TO THE COURTEENTH EDITION 1927

The revision of this guide book has devolved upon me owing to the death of Vajor Arthur Neve—in irreparable less to Kashmir

In the edition the general arrangement of the former ones been muntamed. Some new information has been added and several mustakes corrected. As far as possible the information has been brought up to date

Visitors should however obtain reliable information as to current prices as there are great fluctuations — Constant attempt at imposition should be resisted

Electric power has now become quite an industrial factor.
The dredging has been considerably reduced only one dredge
being employed in keeping the deepened channel free from
all brought down by the Politu river and other streams.

Power is used not only for this and the Stil Tretory but also for lighting Strusger Barsamulla Ur. Rampur Patten Sopur and Guimary Rees and flour mults are woulsed and also the steaming plant at Barsamulla for cutting and proparing walnut wood for Govariment infa factories etc

Among the various books on Kashmir the late Uajor Among the various books on Kashmir is largel unbobe graphical it is excellently illustrated and admirably descriptive of Kashmir Sir Francis Younghusband a Kashmir is interesting and the coloured plates by the late Lt Col Molyneux are very successful

Beyond the Pir Panjal published by Fisher Unwin in 1912 can be obtained in the Club Library It describes the general features of the country and gives interesting accounts of climbing and mountain tours as well as of medical mission work. Other recent books on Kashmir are "The Charm of Kashmir" by Vincent Scott O'Connor, beautifully illustrated in colours by Miss Hadenfeldt, and "Kashmir in Sunlight and Shade" by the Rev. C. E. Tyndale Biscoe.

My thanks are due to all who have kindly forwarded corrections, especially to W. S. Talbot, Esq., C. I. E., formerly Settlement Commissioner in Kashmir.

Travellers will render a much appreciated service if they will point out mistakes and send details of any interesting, new or altered routes.

Munshi Bagh, Srinagar.

ERNEST F. NEVE,

# INTRODUCTION

THIS little book does not profess to describe the country but only to guide travellers to those portions best worth seems. The books below mentioned will give information about the country which it is beyond our scope to supply this book was the first attempt is towards guiding travellers out of the beaton tracks, and laboured under the disadvantages inneficiated to the attempt to compile trustworthy routres not of the vague and postsoil description of books of travel, or from mere hearsay information. Many of the lass known routes have been traveled by the author, and others have been tested by enquiry from more than one traveller, so that the maccuracies eldud be unimportant.

#### RULES FOR VISITORS

These have been elaborated of recent years and every traveller should possess a copy, which may be obtained, price eight annes

The chief rules relate to the following subjects -

- Permits to travel or reade
- 2 Limits of travel
  - 3 The prescribed routes between the Punjab and Kash
- 4 Special rules for Sunagar, the obtaining of servants, sites for camping, milk supply, and firewood
- 5 Rules for house boats, dungas and extra boatmen rates, santation. &c
- 6 Gulmarg rules
- 7. Transport arrangements

N B -These are arbitrary and inefficient

8 Game and fisheries regulations

Some further details regarding the principal rules will be found at page 178.

When in doubt, the Motamid 1 Darbar should be consult-

#### MAPS

If travelling out of beaten tracks no one should be unprovided with good maps

The Trigonometrical Survey Shillers, scale, 2 miles or 4 miles to the inch are the only good ones

ATLAS OF INDIA—Sheets, scale 4 miles to the moh unmounted Rs 2 per sheet, mounted on linen and folded book form Rs 4

- 28 Kashmir Abbottabad, Murree, Punch, Pir Panjal, Sind Valley &c.
- 44 A N W Baltistan or Lattle Tibet
  - S W
  - 9 E Karakorum
  - N W Baltıstan
    - N E Iadakh, Nubra
      - S W Suru
      - S E Leh
- 63 A Eastern I adakh and Upper Indus

There are other sheets of surrounding countries , the trans frontier ones being on a smaller scale

But the author strongly recommends the new survey map on the scale of 4 miles to the inch in colours and with contours and I mile to the inch from the Survey of India Office (Map of Record and Issue Branch Calcutta) Proc Re 120, coloured No 43 J 16 contains Sinnagar District Standard Sheet

The outline sketches in this book merely illustrate the routes described The author will be indebted to any one who will inform him of mistakes and alterations requiring to be made or who will supply innervines for other routes

# BOOKS

A new edition of the Imperial Gazetteer of India will contain much reliable information about Kashmir

Books of travel are numerous while there are some subjects, about which nothing has yet been written

<sup>\*</sup> See map appended

Most of the following books will be found in the Public Labrary of desirangar. While only mentioning some of the principal voids, we describe also their scope. No full account of modern history, has yet been on important, in many ways, in Drew's Keshing and Junius Territories. It is a systematic word on the geography, withoughly &c, of the whole region must of it derived from his own personal knowledge. An abridged edition, oxided the North West Trusts of Judiu, has been published.

The best general description of the people and social condition is by Sir Walter R Lawrence, Kolin, entitled The Fulley of Kashmir. This gives many original facts about the people of Kashmirand the Land Schilment, and is a generally reliable compilation of the stylistics, theory goology, flora and faune of the Valley proper

General descriptions of the Valley proper may be found in guide books such as Lone's which ware written a faw years ago by Col Joshus Duko, I wa A mong the older books are the Transle of Barne, Figur. Higgl, Josephunost and Moscoriff Vigue have the Valley untimately, and also vasted Aster and Slardo but his book is badly arranged and discernate

Recent books by Doughty, Pirie, Huntington and others may be seen in the Club Library

An older book Hyderabad, Kashmir, Sillim and Nepaul by Sir R. Temple his good coloured illustrations of Kishmir

Higgsl and Jacquement were tavellers of scientific tendencies floor croft is one of the best authorities on Ludah, but also saws good deal of the Valley The Official Garcite is a valuable book, but is treated needlessly as confidential by the Government and still contains much that is out of date

A book by the author, entitled Picturesque Kashmir, illustrated by numerous full plate reproductions of Mi Geoffrey W Villius, beautiful photos, is temporarily out of print, but may be seen in the Public Labrary

The work published by Sir Aurel Stein, enhaled *Kashmir's Rays* tarasging, may well be called monumental, and will be of great interest to all who are interested in the ancient history or großesology of Kashmir

Elmsho's Kashmar Englash Desconcrygress v good deal of useful information, in addition to the lunguatar value So also does Knowles, Desconcry of Kashmar Proceeds The language is rich in provents which throw considerable light on the customs as well as the dialects of the country

The Rev Grahame Bailey has written a small book on the Hill Dislects round Kashmir

The Rev J Hinton Knowles, Bp, has published a volume of Kashmiri Foll Stories and the Old Testament in Kashmiri

The New Testament was translated into Kashmur by the late Rev T R Wade BD a former Missionary in the Valley who also compiled the first grammar of the language on which Srr G Grierson has recently published a book

The archvology of Kashmir has been investigated by several Cole s
Ameieri Buildisags in Kasl. 112 at well illustrated standard work. Cun
ningham wrote on the coins and temples and Cowie supplemented the
latter (Journal Amatic Society)

Burrard and Hayden a Geog aply and Geology of the Himalay is and Tibet is of great importance and interest

In the Geolog cal Survey Repo is by Blandford as an account of the Geology also by Dr Lydeker in the same reports Unddienne has done important work since—unde Ceological Reports 1911. Tor the Botray Boyles Mir algars Botray gives reliable information; that is fairly complete and both Acel sand Coventry a Illustrations of Kashmir Tlowers or good.

Tarning to Jammu and the outer hills Drew is the only authority for Aster also Drow is good and a igne visited it before it was a barried by Kashimr Gight has been doscrabed by Lather in his worl on Drew distans and Drew who governed it for a short period Cotonel Briddliph formerly of the Gight Agency published a concise work on the Tribes of the Hinds Kali non rakher out of date

Dr. Thompson s Travele in A. H. Hit alayes and Tibel described Shavola Shayola for which also compare Vigne and Drew while Thompson Vigne Mooractic Cunnungham Bellew (Ausburn and Ansâgar) Torrentse Cowley Lambert Mre Bridges Drew and the Hebers have all written about Ladulh. Tio intermediate regions of Zanal 31 and Sara have been seldom visited except by sportsmen. Anincresting but not quitershable account of a journey through the country may be found in the Abole of Stone by Willey.

Colonel Durand s Making of a Frontier deserves special mention

## THE MAHARAJA'S DOMINIONS

Kashmir is but one Province of the extensive dominions of Maharaja Sir Hari Singh the approximate area of which is 84 000 square miles

The last Census shows that there are nearly 3 million in habitants—a number a million in overs of the estimate made in 1873 A D of this total more than held are Unhammadans who in the Province of Kashmir are in an overwhelming majority

The population consists of races varying most widely in their characteristics the warlike and independent Sikh merges into the Dogra of Jammu and these again into the hillmen of the southern districts

But crossing the Snown Pr. Panjal Rango we come to a race—the Kashmurs—remarkable for the possession of a fine physique but httle mailiness 2 quick intelligence but few moral qualities

To the north of this again we have races of Vongolian type—equat sturdy and simple—occupying Ladakh and gradually blending down the Lindus Valley with the Dard and Galeha peoples of Astor and Hunza.

The drawn of these territories into three great groups is due to the position of the mountain ranges and it is a divident which embraces in a general way the religions and languages of the people as well as the churte and natural products of the country

#### ADMINISTRATION

The Kashmur State is ruled by His Highness the Maharajah Sur Hari Singh Kolin Kovo who is nephew of the late Maharajah Sur Partab Singh His Highness is assisted by Ministers of State The British Rewdent is in touch wish the Darbax In winter he lives at Sinikto of Jammun and in summer at Siningar or Gulmarg H B Howell Esq 081 011 is the present Rewdent There are two Assistant Rewdents one of whom is Joint Commissioner of Ladakh

The Settlement, Public Works, Accounts, Medical, Police and Forest Departments each have British officials in charge under the Darbar These usually reade in Sinnagar There are also Postal and Telegraph Superintendents, who are Imperial officials In connection with the Imperial Service Troops five or six British officers are appointed

# NATURAL PRODUCTS

Among the wild animals, most noteworthy are the bear, leopard, stag (bora smgha) ibex, and markhor Game is getting scarce, but bears are still numerous in some parts

Foves and monkeys are plentiful in some districts

Flies, mosquitoes, and parasitic insects are almost a speciality

Bees are kept by the peasants, and the State is paying much attention to the culture of silkworms

Among the chief trees are cedars, pines and spruces in the mountam forests, planes (cheirs), poplars and willows in the Walley, while fruit trees—apple, pear, quince, peach, mulherzy, walnut. &c —abound

Ruce, wheat, barley, and maize are the staple grains, millet is also grown Vegetables, such as pumpkins, cocumbers, turnips, radishes and cabbages, are abundant, all Engheh vegetables can be easily grown From the lakes the people obtain water nut (anothers) and lotus roots (nadis)

Few Kashmin products are of very good quality and so, too, are few domestic animals of superior breed. Good wool is obtained from which cloth (puttoo) is manufactured, and the fine wool of the goat supplies pushman, from which shawls are made. Among other industries may be mentioned leather work, such as shoes and trunks, copper and silver engraving, parer and wine making, and lacquer work on popus made.

But carpet manufacture in which several English firms

are engaged, now occupies a most important position

The want of proper communication with the outer world has hindered the development of the commercial resources of the country, but, although railway surveys have been carried on for twenty years at great expense, nothing points to the actual undertaking of construction. Schemes are taken up and dropped

#### HISTORY

The eurhest authentic records show Kashmir as a meto demoner of Indian langdoms. For the ancient history see Chapter JZ. In the beginning of our ora, and aguin in the 14th century, it was held by Mongohan kings. At other periods it was held by Pathan kings, especially Mahmud of Gharm in the 11th century, and the Durant rulers who succeeded to the apoils of the northern parts of the Moghul empire on its disruption in the 17th centur. It was during the Moghul epoch that Kachmir attained by greatest fame

Albar, who conquered it in 1587, vivited it frequently Jehangar und his queen, the beautiful Nur Mahu, adorned the Valley with paleces and gardens, and they or their successors built massive serent, or rest house, along the chief routes to the Valley At that time the Jaclum Valley route was little used

The Sikhs conquered Kashmir in 1819, and held it till the death of Ranjit Singh

Meanwhile the Raja of Jammu, Gulab Singh, was extend ing his conquests Ladakh, Stride, Glight and Astor were ameased Parily with the view of detrehing him from the Sikh power, then threatening our borders he was secured by treaty in possession of the newly conquered territory and the Valley of Kashimi was also bestowed on him He diod during the Mutany, when his troops assisted in the storming of Delhi His son, Ranhir Singh, ruled till 1855, and was succeeded by the Mahatara St. Partch Singh.

# RECENT EVENTS

The question of government had before this been under the consideration of the Imperial authorities, a British Resident was at once appointed, and certain changes mutated

Recent years have witnessed many improvements, much being done by the land settlement, by which the status of the outlewisters has been already zared Brancast reforms are also doing much to prevent waste and mempropriation of public money, and to provide surplesse available for works of public utility, which were, till lately, conspicuous by their absence

Military reforms have been mitiated which have transformed the State army into a force which may be rehed on to assure in frontier defence

The conquest of Hunza completed the consolidation of the most northern portion of our frontier and has put a stop to brigandage on the Karakorum trade routes

At the close of 1895, Sir George Robertson held a great Darber at Gligt, at which Chiefs of all the surrounding tribes were present This inaugurated a new era in that region. Valleys devastated by inter tribul warfare are becoming fertile under the Pax Britannica, and the arts of civilisation thrive, without interference by the sovereign power with the internal political autonomy of each tribe

The outbreak in Chitral, the heroic defence of Chitral Fort by a handful of Enghah officers and Native troops—the gallaut march of Colouel Kelley's small force from Gilgit, and the rapid and successful advance of Sir Robert Lowe's Column through Suat, deserve special mention

Since the work of the Pamir Boundary Commission was finished, Kashmir territory joins that of Russia, as well as China

In Kashmir itself there have been some noteworthy events

The cholers of 1892 will long hie in the memory of the people It decimated the city of Srinagar, and spread most disastrously to the villages, in which over 6,000 devths occurred. The increased fucilities for communication with the Punjab ull probably tend to introduce cholera more frequently in the future. The necessity for improved sanitation and a trust worthy nates supply has been recognised. Metalled roads with side drains have been constructed in some parts of the city, with benefit to the passengers and house holders as well as to sanitation. But the habits of the people are as yet unchanged, and the Augean stable is yet but httle cleaned.

The WATER WORKS were completed under the skilful direction of the late Sir M Nethersole, and an ample supply of pure water is now available for every part of the town as well as the European suburb It was probably due to the good water supply that the cholera epidemics of 1900-1907 and 1914 got so little footing in the city

In July 1883 there was an unpeccedented flood, which a swept awy most of the bridges in the city, and damaged many house, becades submerging indes of land and running the crops. The drew attention to the need of preventive works, but the matter was not taken adoquately in hand till after an even higher flood in 1903, since which lotter embrachients have been thrown up and a very large Flood CAML constructed, which takes flood water direct from above the city to the Waltz-Lake, near Pattrin Some new bindiges have been constructed, one of which the "Partsh Singh Kadal," as a speasally handsome and well built structure it replaces the old "Amra Kadal".

The LAND SETTLEMFAT deserves more than a more passing enlogism for it transforms the conditions of the peasantry Under the old regime therecome officials from highest tolowest combined to obtain master and to despuil the people

The revenue was collected in lind and entirely managed for the beat not of the Site new of the poor of the only but of the great state of the first and the Dritted The whole Lovel Government—the Governor of Stransur and the Dritted Thewlaters—ever partners and namagers of a print dening firm and twas from the triffic that they derived the myeaper of the control of their moones. When the late Mixings Results Raphs tried in 1873 to collect the revenue in each he was the acted by the opporation of the officiarity, and this opporation required both tast and preservement on the part of the Directors. Sold-inners to commissioner. The work began by the now Straders Wingster was variety of one brought to a success ful more under the now flav Allert Laverness who was supported through out by the Markage and State Council

As the soldiement progressed it gamed the confidence of the people The averagement on the Lat Daksh at cora amounted in 1889 and the poarsa try score learnt that the now bestdokst introduced freedom. While relearing the exactions on every kind dyrections the assessment was a light one and was fixed for ten years. The value of hard was at conce on hanced, but it was wasty determined not to grant the willinger nights of sake or mergage which might have viewed him from collinal impole and the contraction of the same properties. The same part of Dettain London.

In this way the cultivators secured the reward of their labours with the result that much waste land was seen taken up. It may be asserted that the Kashnur peasantry with their little vegetable gardens, their poultry and sheep, with their abundant fruit trees, with vast mountain grazing grounds, and privileges in the way of firewood and forage, are now exceedingly well off And while the ryot flourishes, the revenue of the State also grows

But in no way have the Muhammadan labourers been more relieved than in the abolition of forced labour on the Gilgit road or to Jammu. &c , on State service In 1889, at the height of a cholera epidemic, eight or ten thousand coolies were sent off hastily to Gilgit, and thousands of others had to pay heavy bribes to escape impressment. The mortality along the road from cholera among the ill fed, ill clad coolies, was fearful All this has been changed'

Buggage animals have been drawn from all sides in 1895 over fourteen thousand animals were voluntarily supplied to the Commissariat Department

Experience tends to show the unwisdom of altogether withdrawing the time honoured system of compulsion from the Kashmiri

If quite left to himself he refuses to sell his farm produce except at exorbitant prices, and he declines to assist travellers The higher the prices the less he needs to work. It has been found advisable to must on labour for roads and canals, paying good wages

The work of road construction has made steady progress, the Gilgit road has been completed, the cart road from Bura mulla to Srmagar was opened for traffic in 1897, and the bridle road to Leh has been much improved District roads have also been made to Islamabad, Shupiyon, Tsrar and the Lolab Both at Srmagar and Gulmarg there are many new houses and new churches

Allusion must also be made to the improvement in the Kashmir forests, which had been so exploited that deodar would soon have drappeared from even the remotest ravines In many parts it has already gone Such a source of future revenue needs careful guarding

But due respect should be paid to the need of the villagers who are perhaps rightly aggreeved at the interference with former grazing and other privileges.

The death of Raya Sir Amar Smeh in 1909 was a great loss to the State

Nothing is of better augur, for the prospents of the country than the consideration His Highness the Maharaja ever has for those over whom he rules and which he shows towards the officials whether Indian or European and cordial relations of the State authorities with the Resident who now represents the Imperial Government And the author may be permitted here to acknowledge the kindness and favour which His High ness ever extends personally to the agents of the Church Mission Society in their educational and medical work amon, the people of Kashmir

# GUIDE TO KASHMIR

# CHAPTER I

# THE KASHMIR TOURIST

THE first canty tribe of human beings whe wandering the sast ward from the primitive home of the race voiced the mountain between the Bright and looked across the wild peaks and nidges to the northwards would with difficulty have believed that in the heart of that apparenth interminable chain of rocky cumnits there was embowned a body villey far exceeding in beauty and fertility even the notest and love heat of those Central Asian valless of which their ancestral traditions told them

The Valley of Kashmir owe, its fame doubtless not less to the wild grandeur of the barriers which surround it than to its own intrinsic lovelines. It is this contrast which has led the poets of all nations to speak of it as an emerald set in pearls But the varied beauties of Kashmir appeal to every want and taste. For the cultivator of the soil there is fertility of land abundance of water variety and plenty of netural products whether grains or fruits. For the herdsman there is rich resturage and broad meadows. The sportamen finds game in the jungles and along the mountain ades The fisher man finds ample use for the rod the artist for his sketch block and colours the archeologist linguist botanist or geologist may well what their enthusiasm over the stately Buddhist rums the luxurient vegetation or the many geological problems awaiting their investigations while they who have neither hobbies nor inclinations who want but rest and amusement in a lovely country and pleasant climate can take their fill out of Nature a bounts

Thus we find quite enough to account for the growing popularity of Kashmir, not only as a hill station, but as a sanitarium

# AS A SANITARIUM

Owing to its distance and the absence of untable accommodation, invalued naturally heatate to go so far in search of health We doubt if this heutation is justified within 22 hours by motor from the Rawalpindi Station, and with the good road which was opened a few years ago the journey is no longer difficult. It may be accomplished in one day The chimate of Kashmur is sminently suitable for Europeans. We ought rather to say the climates of Kashmur, for as much variety whether in temperature or humidity, &c, can be obtained in different parts of Kashmur as in the whole of Europe, from the shores of the Medictransant to the North Cepp.

# CLIMATE.

The chmate of the Valley Proper, until quite the end of Might ye similar to that of Switzerland. As the summer advances, it becomes somewhat relaxing, especially in the neighbourhood of the extensive lakes and mainbes, but the heat scarcely, if at all, exceeds that of South Italy. Up any of the numerous and beautiful sed vallers or upon the meadony slopes and margs of the Pir Panjal, almost any gradation of climate is obtainable. Thus, while at Sinnagar, in July the mean temperature is about 75°, in the Ladar or Sind Vallers at a length of 7,000 feet, the mean would scarcely exceed. 65°, at Sonamarg in the Sind, Aru in the Lidar, or at Gulmarg—all of which are above 8,000 feet—the average daily issuiperature now exceeds 65° and again at a height of 10,000 feet, or at 12,000 feet, the mean temperature in July would not exceed 50°, while great extenses of cold might even then be met with

By the middle of March the winter breaks up The spining is ever changeable and showery, often windy and cold, but by the beginning of May the sun acquires considerable power though, on the whole, the weather continues very pleasant until the middle of Jime when the moreasing heat drives most people to Gulmarg By the end of August, visitors begin to return to Sunagar, or visit different places of interest about the Valley. But till the end of that month the lower parts of the Valley

are unpleasantly warm and steamy

The autumn months are the pleasantest in the whole year with clear, hight, but fairly cool, days. From the middle of September to the end of the year, cloudy or wet days are few and far between In December there is often an early fall of snow and the frost is keen, but it is not till about the middle of Jamary that the main snowfall occurs. For two months even the lower parts of the Valley are seldom entirely free from snow, which often hes eight innhes or a foot deep. Bonormous quantities of snow fall on the mountains around, and communication with the Punjab is sometimes cut off for two or three days, as the Murces couts is blocked for traffic

Approximate Table of Temperature of Strugger

	Mean	Extremes in shade
January to Tehruary 16th February 18th to March Miscoh March	35° Pahr 40° " 48° " 55° " 75° " 80° " 70° " 60° " 50° "	15°-45° 20°-50° 30°-05° 35°-80° 45°-85° 50°-95° 45°-86° 45°-70° 35°-80°

#### RAINFALL.

The ramfall of Kashmur is much less than that of any of the Himalayan hull stations. At Sirnagar the yearly amounts seldom exceeds 27 mehes — At Guinarg it would be considerably more, but even there it is not more than two-thirds of that of Murroe.

The spring months are often showery, and through the summer a few consecutive hot days are usually followed by a storm, which cools the air. In June thunderstorms are frequent and in July and August a good deal of ram falls, noweter, without frequent intermission of sunshine. We speak more especially of Srinagar for at Gulmarg it is not unusual to have heavy rain liveting several days with searcely a break in the clouds.

The monsoon affect: Kashmu in July and August, but its force is much diminished by the Pir Panjal range, and to the north of the middle Himalivan range very little rain falls—at Dras about 10 inches per annum, and at Leh about 4 mehes

# SUITABLE FOR INVALIDS

As a whole, the chinate of Kashmir is much better suited to invalids than that of any other Indan santanim. For chest cases it is more suitable than the climate of England, but at present there is a great deficiency of good accommodation

The Nursing Home is a great boon to any visitors who fall

A subscription should be given by all, entitling to admission on reduced terms

It is worth mentioning that this institution has no connection with the Mission Hospital

Among the Kashmura, malaral faver, liver complaints, &c, are not common. The diveases are essentially those of a temperate climate. Lung complaints are common during the writer owing to deficient clothing, consumption is increasing, dysentary is zare. Cholera occasionally visits the Valley, and in 1889, 1892 and 1900 wought great havoc. In 1906 7 and 1914 there was a less severe endemic. But the mountain margs and aide valleys offer safe refuges from its terrors.

The manutary conditions common to all Assatic countries make the chinate unsuitable for patients with liver discusse of dysenters. Stringgar is decidedly relaxing during the later months of summer and early autium espocially if floods have been prevalent. The elevation of Gulmarg and Sonamarg (8,500 feet) is too great for many of those who have heart-disease or are liable to asthma.

#### FOR CONVALESCENTS

For convalescents from acute diseases, for those who are westened by prolonged fever or over-train, for the early stages of consumption, nervous disease, dyspepsas, &c., Kashmir is emmently suitable during the summer and sutumn

#### WINTER IN KASHMIR

As will be sen, above, the vinites are often snowy and early During recent winters the lakes have conclusive been trozen, permitting skating. The vivitors accommodation is not surfable for the cold season, and many people prefer to stay in bouseboats. The European community is usually very sociable.

# CHAPTER II.

# HOW TO TRAVEL.

THE tweller who intends varying Krahmir, whether it be for pleasure or health will probably first seek inform atton as to the best time of year to spend in Krahmir, which route to go the expense of the journey, and what arrangements to make for it

To some of these points we will now advert

#### WHEN TO GO.

If a stay of five or any months is to be made, May is the best month for the pouracy up. If but two or three months are available, I should recommend that the return journey be at the end of October, so that the early part of the autumn may be spent in Kashmur.

# WHERE TO STAY.

In Srinagar there is now a small permanent community of Europeans The very few quarters available for visitors are always occupied early in the spring, but there is a good hotel belonging to Nedou & Some

But few would vist Kashmir in order to stay long at Sn nears and it is better for visitors to have then own tents or house boats. The, cas then move from place to place, according to the season of the year. In July and August most people go to Gulmarg, or up one of the side valleys. At Gulmarg there is a hotel and numerous luts.

#### TENTS.

Those who come for the whole summer, and possess tents, should bring them But tents may be readily hired from the

#### GUIDE TO KASHMIR

vanous agenc us in Smnagar at r seonable rates (R. 4 to Rs 10 per mensem)

It is well to have good tents Thay should have a double fy with proch in front and both room behind. Double piede tents are the most comments and 13 feets by 8 feets as very fairs as . They should weigh well under two muschs and divide into two loads. When damp the outer fly of a large tent takes up nearly last in smanle values of double much larger than the bover saw would also under by or by the difficulty and expense of corrage. For a bachelot the smaller cases of double fly habit tents weighing 84 lbs are simple. A sufficiency of tron tent pege should at pays be carried before starting on the posmoy or the tent should thwys be pitched so that the poles ropes &o may be tested and nothing omitted.

Coolees stril iron tent pegs so they should be counted when striking and pitching the cump

For wet soft ground wooden pegs 12 fe tlang are desirable

#### HOUSE-BOATS

Formerly the only boats for living in were the Kashmin dungals with matting roof and index Some of these were fairly confortable and suitable for moving about in the summer or autumn. The new of three or four women as will as men couply the limiter part of the boat which is limited as from Rs 15 to Rs 45 x month according to the size of the boat and number of its orew. Another smaller boat is needed for servants and cooking (See Rules for Visitors)

Attached to these boats is the shikara a light swift boat propelled by four or aix paddless

The hre of these mextra a plan boat with matting not Rs 2 per measem few of these with campies should exceed Rs 3 per measem and extra men at Rs 6 to Rs 8 per measem in Sinnagar

Of late years many large house boats with wooden addehave been built. They ware from 9 to 12 feet wide and have several comfortable mones with doors windows and fire places Some of these are left furnished with bedstwads tables charm conclery & 6.6 The rates war from Ra 200 to Rs 600 for the season exclusive of the orew Tatra men can be lired as 8 amuss if specially engaged b, the day otherwise at Rs 6 to Rs 8 a month Away from Sinnagar Re 1 extra When travelling up or down the river six of eight men are necessary for a large houre loat. This is indeed a luxumous way of moving alout the lakes and waterways of kashime.

Some ladies living in house boats at Srinagar take paving guesty. Information can be got from the agencies as to rates

The dungah house boat or boarded dungah has wooden sides and roof but is smaller and lighter than ordinary house boats. For details early application should be made to the decenies advertised.

#### CAMP OUTFIT

Formerly travellers marrhed stare by stage and brought their own out? Now m at come by oar and ind it more convenent to hire everything in Sunsgar " hot only tents tables chains and durnes "tut bath room furmiture and cooking pots croclery Ac can thus be hired and be found ready for use at the tongs terminus. Servants can also sometimes be obtained through the agencies and thus the journey can be dore in light order. Cooking pots if of copper should always be freshly tinned before use. Block im steel or aluminum sauce-pans are better.

Many articles of furmiture are made in Kashmir such as the state of the state that also felt rugs woolle, table doths ornamentally worked braided mantlences borders &c so it is easy at small outlay to make a room or house both comfortable and pretty. Yule trunks are very useful and durable though often rather heavy Large wooden or steel boxes weighing a maund or more are not autable for camp use Tin boxes in a wooden frame work are very useful for carring books wearing apparel &c while for stores and cooking stensis nothing is better than the deep leather covered baskets called kilts. For several years I have used large oval baskets called

The Kashmir General Agency is for all kinds of camp outfit pro

Armons &c

<sup>\*</sup>There are several European agencies The oldest are — Cockburn s Agency where all kinds of Kashmir articles can be bought and tents or boats hired

pitats, covered with leather and encircled by straps, as mule trunks. They are strong and water tight and, it the same time, very hight

Winterer is used should be sufficiently under tight to stand a shower and not too fine for rough use Before starting, anything which will not be unnted on the road should be packed spearately The fewer boxes needed at each stage the less trouble will be given in starting

#### SUPPLIES.

On the cheef coutes, fowls, mill, eggs, common flour and butter can usually be obtuned and at a few hours' notice a sheep can be purchased. These are all sold at fived raise, which are usually very high. The mun in charge of the rest house, ought always to show the late of pures, agond by the H-uden's Most European vorse can be obtuned at Stunagar. For ordinary purces of some of the chute thurs, vice p 11 et seep!

#### CARRIAGE.

Those who travel in by the Murree route will usually prefer to travel by motors, phaeton or ekka (wide next section)

For other routes, or in travelling about Kashmir or Ladakh, cooles or baggage animals will be necessary

If, at the stratus point, an arrangem it over be made for mules or cooles to go right through, so much the better. Any luggage, specially hable to mjury, or of much value, should be put on cooles. The roads are bad, and bovo, on mules are often injured by contact with roads, or the way even be knock ed off the aminals and be lost in the urser. In its realling about the Valley, or by any route on which there is no regular provimen for carrange, it is well "o be armed with a parteans from the official at Sinnegar, who is appointed by the Maharaja to attend to the various washe of European suitors.

The ordinary mess of hire are Rubbar two Tonga Rs 5, Iron tyre Rs 98, Elska Rs 98 for rooke 6 to 8 annes a stage, pomes or mules, 8 to 12 annes Cookes seldom object to carry are thirty five seens, although, nominally, the limit of weight for them is wenty five seen.

Kahara are paid 6 to 8 annas a stage Trained kahara can usually be obtained at Sunagar through the Motamid Darbar,

#### CLOTHING

Clothing for Keshmir should be of medium thickness or with Mashmir homespun is very chery and useful for ulstressinding habits & A solor forp should be worn as it sun has great power even at high altitul. If snow has to be crossed a blue veil and thirds spectacles will be required. In fine weather Kashmir ohyphes (sim lib) naw well replace booth but on wol ground or in many wetther these are indeed worse the nesdess Sport men will soon be in the value of the grassic and it platted by their coolect they have littliffe wear in them but give a perfectly secue hold on rock or steep grassy slones and man be worn over boots.

On snow nothing is equal to well mailed ammunition boots Leg bandages (putties) are worn in many people. If put on too tightly they construct the circulation will conduce to cold feet

Mosquito note are receded in travelling about the Valley during the summer. A good wavely roof sheet is us ful for protecting bedding to

It is quite unnecessary to bring books is there is a good Club Labrary at Sringgri and also at Gulmarg during the sea son

# RATES AND PRICES

It is not en to deginate on the villert of prices which are subject to mail of finctuation and what is now written may in a few months be, out of date but at any rate for the current season at should be useful to vinitors and certainly many of the wholes we unlik by to vary much. Along the main roads there are published official rates.

# WAGES

Cood servants are very difficult to obtain. Such do not care for short periods of service but seel permanent work, pre-ferably with local residents

Cooks —Receive from Rs 25 to 30 per mensem Khitmatgars and Bearers —From Rs 20 to 25.

Blavice — From Rs 13 to 16 These help in other work Graveuis — From Rs 8 to 10 a month and succe from Rs 10 to 12 a month

Succepers -From Rs 14 to 16 a month

Boatmen —If for hou e boats Rs 10 to 12 a month for dungals Rs 8 to 10 a month See special official list which each loatman must produce They help in all sorts of worl

Shikara boats 8 as per diem per hanji and 1 as per boat half day half rates

Rossed — Those who travel about the Valley where supplies re plentiful and the proces of most thines less than in the city, should not give as and allowance. But away from the plenty of the fix I may Vallet up on the halls or in with Vallets resert 2 or 3 anners a dax may be encom and if going to Ladal h or over snow passes it I usual to one a warm cout to one a servant also a blain of and chambes

In every case il ere si ould be a definite agreement beforei and —
In munhabited districts the traveller should curry a supply
of moe and dal resumg duily measured retions of about
one seer per man

If sheep can be purchased it is well to treat the cooless liberally

Good shil are et — Can ask their own price many get Rs 30 or more They will arrange for under dikaries and regular coohes

Stanger prices—Tend to use in the summer season but in where many articles are more expensive because more served There are some great fluctuations still so these rates need revi and from time to time

Freetood—1<sup>1</sup> mands a rupes man be got So the duly allowance for cooking for a large party seldom evceeds 10 annua At Srmager there are special arrangements at a depot In most villages wood is abundant and very cheep, 2 annus a day is enough.

Bread —The usual rate is 8 loaves a rupee Pampoor rots —These are 32 for a rupee Meat—Good mutton is usually about 1½ seers a rupee In the districts if a sheep is killed the meat might be taken at 5 seers a rupee The shepherd is seldom the owner

Fowls -- If good sized sell for a rupee small ones 2 for a rupee

Ducls —From 8 annas in winter to 12 annas or even a rupee in summer in the city

Geese - Lach Rs 2 to 3

grounds 10 seers

Fish -4 to 6 annas a seer except very large ones when price is more

Eggs —Searons vary When plentiful 6 to 8 annas a dozen

Mill —Also varies 6 seers a rapes or in the higher grazing

Polatoes —Are good and can be got at about 16 seer a rupee or more in the places where they are grown in summer

Veptables — English kinds can be got for 8 to 10 annas a dal from the public garden near the Library Kashmir vege tribles such as tumps currots vegetable marrows tomatoes near etc are very cheap

Trint—Varies very much The prices are much higher at Gulmarg than in the city Hawkers will sometimes refuse the highest prices mentioned below if there is any scarcity

Apples.—The best European may be 4 or 7 annas a dozen but Kashmir apples Re 1 8 per 100 Apply to Director of Agriculture

Pears —The best might be 4 or 7 annus a dozen the Kush min 8 or 10 annus per 100

Metons -6 or 10 annas each according to size and season

Grapes -6 to 8 annas a seer-seldom really good

Approofs and Peaches —The best 2 or 4 annas a dozen, Kashmuri 2 annas a seet

Chernes—Trom 8 to 12 nams a seer
Raspherrae — 4 to 8 annus a seer
Race (basmats) —3 to 1 seers a rupee
What —8 to 10 seers a rupee
What —6 to 7 seers a rupee
Barley —12 to 14 seers a rupee

Ardana for horses Muze 12 to 14 seers a rapee barley

16 to 18 gram 8 seers per rupee

Giass for lorses—1 to 1 mound a rupee
Ruce Straw for lorses—100 bundles (korn) for Rs 8 to 12
Flour Kasluntz—Pest 6 seers 2 rupee

Dal -5 seers a rupee
Butter -For table Re 18 per lb for cooking Re 1 per
lb

Ghee — to ? seer a rupee
Rassns — I seer a rupee
Currants — ? to I seer a rupee
Country oil — 2 seers a rupee
Sueet oil — 1 seer a rupee

Kerossne oil —No 1 Snowfiels per box of 2 tans Rs 15 No 2 quality Rs 11 8 fluctuating

Sugar —Per bag of 5 seems according to quality about Rs 2 8 constantly fluctuating This can be bought cheaper in bulk at annas 8 per seer

Tinning of kitchen utensils costs I to 2 annas each article Shoeing horses from Rs 2 to 3

House bests can be got at from Rs 40 a month exclusive of beatmen to Rs 600 for the season according to size and furnishing Some have crockery &c &c

The list of official rates is usually posted in the Library verandah at Sinnagar and is changed fortnightly in the season

N B —The above are rates paid by residents visitors usually have to pay more especially when Sringger is full of visitors

#### MANUFACTURES.

The European firms are endeavouring to improve the quality of Kashmr carpets The pince varies with the quality to Rs 21 per yard or moio But some of the common native carpets sell as low as Rs 5 per yard

Kashmir embroidered namilahs are handsome and cheap The plain felt is brought from Yarkand or Ludakh An ordinary size about 7 first by 4 feet sells for Rs 6-8 or 7

The common brown nandahs made in Kashmir have a most disagreeable smell and wear badly

Silver engraved articles sell by weight if not very small. The purchaver should see that no part of the article is disproportionately thick and heavy. One rupee per tolah is an ordinary price, and if there is any giding, 1 to 2 annas per tolah more

Copper-work varies much in the quality of engraving. The inferior qualities sell at about Rs 4 to 6, and the most finely engraved at Rs 8 or more

Good wood carving is about Rs 3 per foot square

Regarding other things, such as leather work or silk embroidery, it is difficult to mention any standard by which the purce can be fixed In making to order the Sunagar tradest man usually supplies bad quality, but the workmen are clever. There are good guismuths.

#### CHAPTER III

#### ROUTES TO THE VALLEY

#### MURREE ROUTES

THIS is still the one in clief use as there is a good road with motor cars and loarner so that the whole journer need not takes over fortweight hours Besides thus there are other roads autable for stage by stage marching

### RELATIVE ADVANTAGES

The Minree road is the essent the Pr Paqal the most pictureaque the Punch route is also very inchiracy but difficult and derious while the Lammi route is short and leads through prefty somery and a good 10 feet me or road has now been constructed.

It used to be negarded as the Maharijas purvate road and permission was seldom granted to Europeans to travel by it (see Route 1) but now it is open it all. There are other routes by Abbottabad Chamba to which will be described the Route Tables

# THE MOTOR ROUTE FROM RAWALPINDI

# KASHMIR VIA MURREE

Ravalpindi is an important station on he North Wessern Bailway Through travellers need not stay at Murree

#### CAR RATES.

Five-Seater Cars.—Re 100 to 150, Rawaipindi 10 Srinagar Single seat (when available), Re 20—40, seats in lornes, Re 10—20 With an early start from Rawaipindi cars reach Un, and lornes reach Domel or possibly Gath

Agants for Gara.—Messr Radha Krshen & Sons Ama-Nath & Co, The Punjab Motor Car Coy, The Express Motor Service Cov, Messis Sohan Lal & Coy, The Royal Motor Service Cov, Charagdin & Sons

Agents for Lorries.—The Express Motor Service Coy, The Punjab Motor Car Coy and the Royal Motor Service

There are agents for all the above at Ravalpindi, Domel, Baramulla and Sringgar

Postal Cars.—With H M Mails carry one passenger for Rs 50 from Rawalpindi to Srnagar Timing details and booking rules can be had from the Postmaster at Sinagar or Rawalpindi All booking arranged at these termine post-offices only

Rates for Luggage.—Slow Lorry Transport, Rs 8 per maund , Fast Lorry Transport, Rs 10 per maund Rates vary from time to time, but Rs 10 per maund is not exceeded

## PETROL.

Is available at Baramulla and Domel by previous permis sion to buy To be obtained from Meszrs Radh's Kisher and Sons, and Cockburn's Agency, Srinagar, or from J S Evans, Northern Motor Works, Rawaipindi

## SPEED LIMIT.

Motor driving speed limit on the Kashmir Road (Rawal pindt to Sinneger) and in Kashmir itself is 14 miles per hour On the former it is wise to adhere to this limit, especially on the more dangerous portsons and where the road is narrow, It is comfortable to travel by landou doing three stages of any. The drive heal is that no change of homes can be obtained and that any landship or other breal in the roud blocks all further process. Whereas it traveling by tongs a fresh whitele can be obtuned levened the breal.

Elkes for severants or luggegs may be obtained also at Rs 50 at bury inner Rs 50. The whole distance will be covered in fire days halling at lutiner Domei and Chai da and Bara nulla. Elkes may be made comparatately comfortable with cashions for a single presenger expecuall to firm, a foot board at the book. The washeld are extracted and much luggego maghic well adopt it is method of travelling. Herevy begange should for possible be sent in ad unce a fortungle earlier by buillock care. Tonges Ps 75 turn turns Rs 50 buillock care Rs 100 Relays Ry 105. Rewalmed to Stunger.

Dak bungelows have been built all slong the road from Rawalpund to Bernmulle and there as a liminame at each Parity good danking water is obtainable at Domel Dulu Garin and Fattun—the is imperative to built at all bungalows Mil, also should be build

Crucity to Annual Prevention Posts have been established at Baramulla and Domel and there are two Inspectors at each place to whom any cases noted can be reported when reasonable horse exist of identifying the annuals or the r drivers

The first two stages from Pindu would be hot for marching after the middle of April and also the two stages between Kohala and Domel. The change of temperature in going up to Murreo as strilling, and travellers should have warm wraps handy

Eye protectors are useful on the journey

The stages to Murree are three-

- 1 Barakae, 132 miles—Altatude 1 720 feet So far the road 1° very level and 1° partly shaded by trees
- 2 Tret, 12 miles—Altatude 4000 feet—A fair dak bungalow The road soon enters low hills and scenery which in the spring is beautiful but in summer and autumn hot and

dusty. At a steep corner (17 miles) toll is taken. Two miles further is the pretty garden at Chatta, a pleasant resung place for those, who travel slowly. From Salgram bridge (twenty-three miles from Pindi) the main ascont begins and in the next two and a half miles the top of a pine clad spuris roached. Well situated dark bungalow near a larger bazar. The bungalow commands a fine view. There is a Kharsamia

3. Murrer, 13; miles—To the mage of Ghora Gali with 1's prominent watch tower there is a steep rise with some zig zags. Seven miles from Tret the Nurree Beavery is seen and the road passes through some flue forest scenery. The Lawrence Asylum is not far off up a steep path

On the road at the Browery is a Telegraph Office

At Sunnybank, 37 miles, altitude 6,050 feet, from Pindi the road to Kashmir continues to the left and that to Murroe turns sharply up the hill for two miles

At the junction of these roads is the Sunnybank dak bungalow Clove to the tongs terminus in Murres is the Victoria. Chambers Hotel, where a good meal can be obtained. The mail cars leave Pindi at about 7 am, but a printed time table can be obtained from the Postmaster. Ekkis do the distance in about ten or the kis hour.

There are several companies now that run passenger and baggage lorries and cars to Murres from Findi and 3 reliable companies run a fairly regular revice to Sunagar Seats in lorries cost Ra 35 to 40 each, and baggage is carried at R- 10 a maund for the full journey.

There are other hotels higher up the hill, also the chief shops and the Post Office beyond to the Church, which is 7,000 feet above the sea. The view from Murroe is splended on a clear day, both of plause and of snowy mountains

There is a considerable resident European community

Murree to Srinagar.—161 miles, divided into eleven stages

1 Kohais, 291 mules from Prada 64 mules —Height 1880 feet an extremely hot place in summor—115 Take 1800 a stantly reached in June and July The du bungslow is now considerably enlarged and has 8 moons and a during noon Punkah cookes are always forthcoming On the curt road there is no del bungslow short of the So those who travel stage by stage may go by the old bridle path by which the distance is much less and there is a bungslow half way.

Bridle path—Murresto Dowal 10 rules—This is a rather steep de scent of 2 500 feet the path winds through beautiful forest with splendid views. The bungalow is a good one and is well situated.

Dewal to kohala 94 miles —There is a steeper descent rigzingging down a rather shadeless alope for 5 500 test It joins the eart road at the banks of the Jhelum a mile from kohala

The Carr man tell es a longer succept to the est. Party of it are very pretty with fine rules. Four mule from Murrees is Topa Cemeter. The road for the next twenty miles windon and out of the spirit, below which twive miles from Sunny band is a P W D burgelow at Raws' Application of permission to use this must be made to the Decentive Engineer P W D Rawshpind. There is the usual furnition. The nearest burst as at Plays was three mule further on

At Kohals there is a large dal bungalou in the bazar below are the Post and Telegroph Office. The former suspen son bridge was swipt suar by the flood of 1893 and was replaced by a measure and lofty girder bridge.

The opposite bank of the river is Kashmir tirritory and there is a Customs House it the budge Personal luggage the decompanying the traveller is exempted by the Vaharaja from taxetro:

A bridle path leads from Kohals to Nathia Galli a distance of 15 miles but with a stiff ascent of 6 000 feet. There is a dak bungalow at Doconga Galli good roads lead thence to the other Gallis and also on to Abbottabad

2 Kohala to Dulas, 12 miles—Altatude 2 023 feet—Toll has to be paid on crossing the bridge, the road is now in Kashmir

territory, and for the rest of the journey to Baramulla is on the left bank of the Jackum

The cart road with a very even gradient, gradually ascends for the next seven miles, sometimes passing through tunnel or cutting in the face of the precipitous banks. In the early moining it is fairly shady, but hot in the afternoon. Many picturesque scenes. At Chattar the road decends by a long zigzag to a good bridge over a large stre ou. There is a picturesque little dak bung don at Dulei 2,023 feet above the sea, which was christened. "Honey moon Cottage." by Lady Ripon

3. Dulai to Dome! A miles, from Kohala, 213 miles Till the last mile the road is cut in the face of the chiff, and is very liable as in the previous march, to be blocked by landships after run. Some of the cuttings show interesting actions of strata, especially near Dome! A mountain above Muraffara bad, known locally as the Karnal Peak, is the most pronument feature in the occasional vaw, it rises to 11000 feet, and is covered with snow during the cutty part of the summer

At Domel then is a State rest house, altitude 2,171 feet. The large dak bungalow is near the road. Thate is also a Post office and a discensive Beyond this is the under readence of the Engineer in Charge of the road, and the bazar, a new bridge also crosses the river Jhelum, who take at Domen an acute bend to the east. Below Domel it is almost due north and south. At the ancele, and jirt oppose the bungalow, it is joined by the Krehengunga, a river of neadly equal rize. A mile or so north of this the town of Murafinarbadis seen with one or two temples, and beyond it, hidden by riving ground, is fishly find the Sikh Bort. This is where the Abbottabed route joins the Mivrice road. In the early part of the century the hill tribes, Bombas, &c give the Sikhs much trouble, even randing into Kashmra si are as Sopor.

The road from Abbottabad may be seen crossing the ridge to the west, 1,500 feet above the river

This is never closed by snow, as the Murice route usually is for several weeks in winter (see page 26)

4 Domel to Gathi 11 miles from Kohrli 34 miles—
The concert quite changes is much more verbint the valley
more open with good verw of detant wooded hills 16 15
markedly cooler thru either of the preceding man.bis 1 bove
thru point the fall of the river is more rapid. If it is not Post and
Klegraph Offices at Garbin height 2 623 foat above sea level

The handsome new bungalow s. at the neutr and of a great plum Stores may be obtained In autumn a mosquito net is advable s there is malars here On the opposite adds of the rater is a large village in it is in primarely a suspension bunder. A short out from Chatter comes or the night interest of the control of the control of the schuld of 200 feet.

5 Garh to Chemur, 16 miles from Asbula 61 miles —
About two miles from Crish the nor li raws the nut or see
a low spur at the 39th mile and repoint the r r r do a higher
level. The general devation of the march is about 3 000 level.
A few chem's trees are met with Some of the towns are, fine
Late in the vitermoon this march is should by the high bills,
There are several pleasant fullem place on the mod. There
was four-rive burn, alow at Hottiam (15th mile) skittude 3 113
tiest at Chemin.

Beyond that the sceners as bolder and more bounted hours on man he would Hatts a new assurement for burder crosses the river leading to Kunnel Valley. The hill side is studied with fine pine trees (longifolia). On the roppests, and of the river there is an old fort in the narrow space near it a Sikh army was once nearly annihilated by a night attive. The Pahans rolled hings stones down from the slopes above and then dawing down a word in hand completed the rours. Several hundred Sikhs fell.

At 51th mile is the little barar of Chenari and one mile on is a water full above the road A full ship is m prograw above this fall and the road has been extract away miny times. A good bridge span the rivine below the water fall. But the hall is still rather dangerous

Chen in bungalow replaces the old staging house at Chakoti which was burnt down in 1914 and was pleasantly attuated overlooking a small plum beyond which the mountains again close in There is a swing bridge (fluile) of twisted birch twing, below the bungalou, which is three hundred fact or so above the river, altitude of Chakota 3,993 feet

6. Chenari to Uri, 18 miles, from Kohala, 69 miles —The scenery of this miles in a slow very bold, with lofty precipies on either side of the river. The road has to crass sweared narrow gorges and about half way is excavated in the solid rock with lungs cliffs above and below and offers some beautiful spots for a half.

The mad is boldly cut in the face of the pricipice with the river far below. There was much loss of life in making this section.

At the 58th mile is a big bridge in a chronic state of disrepair, fornicity all the bridges were wooden, now these are being replaced by iron girders of wide span

At Barambhat is a great landship where can cannot always pees. Further on, the road after heavy ran is dangerous owing to falling boulders. The grandest part of the gorge is about the 64th mile. No uring Un, the foit and willage will be seen on a plateau 300 feet above the river, and beyond is the valley, down which comes the Punch route. Un is 4,370 feet above the see. The village gives the latte to a Muhammadan Raja who holds the jugir.

The "alluvial fans," or sloping plateaus bordering the niver at different levils, which in met with on many of these marches, are specially well marked near Un Below the fort is a new suspension bridge. The nullship near Un were once famous for markhor \* Rears are still numerous.

The bridle path to Punch leads up a valley to the east and crosses the Han Pr. The Ur. bungalow has been built in a good powtion and with superior accommodation. Passengers can usually get dumer here, and halt the might from Pindi (with an early start from Pindi).

<sup>\*</sup> Some of the nullahs are reserved.

- 7. Uri to Rampur, 13 miles; from Kohala, 82 miles,-For the sake of the gradient the cart-road makes here a long detour up the valley, while a short cut plunges down into the ravine and then climbs several hundred feet up the rocky spur. The valley of the Jhelum here contracts again, and the road is cut along the face of some interesting rock. From Domel to Uri the only geological formation has been the Murree sandstone, a rock of great hardness, varying in colour from vellowish to purple brown. Here we come on slaty schists, succeeded by limestone, and this again by schists belonging to the Pir Panjal metamorphics. Hence the wild beauty of the scenery. The hills recede and the gentler slopes are covered with deodars. Half-way, near the 76th mule post, close to the road, is the old ruined temple of Brankutri, similar to those in Kashmir, but more dilamdated. Beyond this the road is fairly level. Beautiful forest trees abound; the ground is carpeted with flowers and ferns. The occasional views of river, forest, mountain and, early in the season snow, are very fascinating. Just beyond 77 miles are the extensive electric power-works. There is a flume 6 miles long, with a fall at Mohura of nearly 400 feet; there are 8 turbines developing power for transmission by the overhead wires to Smnagar, &c. Nearing Rampur there are lofty firelad chilis of dark slaty rock towering over the road. The bungalow is a good new one, the chinate good and view levely; altitude 4,842 feet.
  - 8. Rampur to Baramulla, altitude 5,193 feet, 16 miles; from Kohala, 88 miles.—Thus march us comparatavaly level. A mile from the bungalow the Buniarstream is crossed. There is a lttile bezar here near the saw-mile, above which us a lut for the Road Enguneer. Beyond it there are some large roeks scattered about, which were probably transported here by gladies from the valley on the opposite side of the nver, where moratuses may be seen. Near by, on the road, us an ancient temple, called Bhamyar, repaired many years ago by Dawan Kirpa Rom (wide p. 113). Two miles beyond this are the fort and village of Naushera.

Close to the 87th nule-stone a foot-path (difficult in wet weather and scarcely practicable for horses) leads up a narrow ravine above the village to Gulmarg (vide p. 64).

From Naushera onwards great damage was done by the carthquake of 30th May 1885 A few miles beyond Naushera the valley opens out The Jhelum, wide and placid, emerges from a narrow gorge to the left It is navigable for small boats. The tonga road follows the over and the great electric dredgers and dernols formerly excavated the river bed to improve the dramage of the valley, and lesson floods The old road went straight across a range of hills about 700 feet high, which here close in the valley From the top there is a wide view the beauty of which has been cometimes evaggerated But on a clear evening, towards sunset, the mountain panorama is indeed charming, by contrast with the green meadows, marshis. orchards and hidden villages, among which the Juelum winds its sluggish course, and beyond which the Wular Lake can be seen All the Lorthern part of the valley of Kashmir is visible, with the conspicuous peak of Nanga Parbat, 26,900 feet, towering above the nearer mountains Haiamouk, 16,900 feet, rises straight in front, superently sheer up from the Wular Lake, on the near side of which Sopor is seen, far away on the right the peak of Kolahor, 18,000 feet, may sometimes be recogmed On the south the Gulmarg ridges look quite close

Baramulla is a town of about 800 houses. It was almost entirely destroyed by an earthquak in 1895, but was quardly rebuilt. Some taw liers take loats here and travel by water to Sinnegar. A new linding crosses the river to the form which is chiefly ituated on the right bank. Hormody there were many bears on the hills should, but they are becoming scales. There is a shady bagd on the river bank, which affords a pleasant encamping ground, a lattude 5,150 feet.

There is a big dak bungalow, a rest house for His Highness and many official buildings, engineering works, and a Roman Catholic Mission School

From Baranulla there is a direct road to Gulmarg, about cighton nules. It crosses the low hills to the south (see page 63)

 Baramulia to Patan, altitude 5,210 foot, 161 miles — The road to Srmagar skirts these hills for some distance, then crosses the foot of a putern and I was line a sto Paken fourteen miles Patun is considerable vil age with a one good camping grounds and shaded by them they have is a small del bungdow 45 mile 19 by road an some old curved stones altitude 5000 feet.

Within hilf a mile of Baramulla a new of the peal of Nanga Parbat can be got and again from near Pat n

hear the road by ond the village on the lift in two an

cient t mples (wide chapter on temples rug s 109-117)

19 Patan to Snnagar altitude o 199 feet imare Kodal 18 miles from kohrla 132 miles —The roal as on the level valley with monotonous news of poplars on either side. Near the 14th mile post a new bridge crosses the or at 1900 cannibuted in 1904. At Unruan the 1 se a fine enramping ground by some long clares over looling a small never. Another mile on the new carter of to Gulmerg a rus off to the inght Close to the cut the road was ps round the large parade grounds. The European quarter 1s two miles further on

The great road thus finished was benun in 1880 and the section to Paranulla was opened in 1897 when His Highness the Maharan was driven right through. It has been a costly undertalang in lives as vell as money but it has produced one of the finest mountain rouds in the vorld. There have been some enormous cuttings through almost solid ricl or along the face of c aglomerate cliffs. With a wile and solid roadway it is still an exciting thing to drive at full price along the edge of those huge precipices between Un and Hatti Many of the loftiest bridges have been more than once swort away by sudden floods in the mountain streams. In 1893 all were swept away at once Whol, mountum aides have begun to slip away and consent vigilance is required to repair the effect of floods. frosts landships and avalanches But hit orto vory few severe accident a have happened to any presenger in the Kashmur tonges and yearly the danger of such with ordinary care grows less The road has stimulated commerce to a great extent not merely are tons of frmt now exported but the effect of improved communications has made itself felt in the far away bazars of Yarkard

## THE ABBOTTABAD ROUTE.

The Abbottahed route is the natural way in winter when Mirror is blocked by snow and all hotels cloved. A new malway is running from Serai Kala, North Western Ruli ay, to Have han a few miles from Abbottahed. When the roal is widened and the railway completed to Abbottahed the muli will usburally go they way.

But there are still not proper facilities for travelling. Motors are now run between Abbottabad and Domel

Tun tune and ckkes con also be obtained to go through at the same rates as from Rawalpind. The road is being widened and is in fair condition so three stages a day can be done without changing horses.

#### HAVELIN TO SRIVAGIR

### Summary

Havelian to Abbottabad — Abbottabad to Mancehra Manschra to Garhi Habibulla Garhi Habibulla to Domel	:	:	9 Vales 16 " 19 " 14 "
Here joins the main read Thence to Srinagar			111 "

The total distance 169 nules, is, therefore, a few nules shorter than by Murret, there is much less ascent and it is never blocked by snow Refore the rulaw reached Havelian inveller, had to start from Hawan Abdal, a station on the North Western Railway, about one hour's run from Rawal punds

It is 23 notes to Hampur, a good, slightly ascending road. The town is well situated, surrounded by fruit girdens and well watered. There are 30,000 inhabitants The dal bungalow is a good one

Beyond Hampur the ascent increases, and at about 36th mile there is a big bridge, and then steeper ascent for some miles

Abbottabud is a pretty little station in the basin of some high hills. It is a cantonment, and there is a fairly good dak bungalow. There are many groves of encelyptus trees

Snow occasionally falls here in winter as the height is 4,000 feet above the sea

An excellent and well illustrated Gazetteer of Hazara District has been written by Watson

From Abbottabed roads go to Thandian and Nathia Galli

Abbottahad to Mansehra—16 unles —The road is good, it ascends somewhat for a few unles then crosses some ravines and descerds gradually for 3 unles to Vansehra Good bungalow. The distance is part for as 1½ stages

Mansehra to Garlu Habhulla—19 miles—At first shirting hills, then down across a wide tallet, then up to a forest nige, then for 5 miles down aggregate to the Kunhar nier and mile on to the del bungalow, close by the bindge A direct path from Abbottabat to Garin sives many miles — Two stages are charged for the marob

Gark Habbulls to Domet—14 mules —Jona Murrer road. The new road crosses the Kunhar or Mansuk it Scale and follows down the left berd, gradvally mang to a low pass about 8 miles down from which, making a sharp V berd, it descends to Min ackarbed, crosses first the Kishengrage, and then the Jhelum

This road, if widened throughrut, would be the best route for heavy luggage, and is open the whole winter as far a Un There is a shorter, but steen path from Garlu to Muzaffarabad Toll has to be paid ou the furdges

### KASHMIR VIA PIR PANJAL OR PUNCH.

Prior to the extension of the railway to Rawslands, the Pir Panjal was the favourite route to Kashmir It was the

quickest way of escaping the heat, and afforded at least as good a road as any to Kashmir amid the grandest scenery. Now the scenery remains, but the other alvantages are lost, Very few travellers now choose the Pir Panjal route for going to Kashnir, and but a small proportion for leaving. The pass is closed by snow till the middle or end of May and after the end of October, at which times a detour via Punch has to be made. The road, as a whole, is bad-often not better than a watercourse. Occasionally in July the small bridges are washed away and the rivers may be unfordable for some days. The early marches are hot, and the climbing in parts is stiff. The bungalows are inferior. Still, as a whole, the scenery is grand, and the traveller who elects to see it and enter Kashmir by the Pir may indeed be fatigued by the journey, but will remember it ever after with pleasure. The start is made from Guirat on the North-Western Railway. Travellers would do well to get information about coolies, supplies and accommodation from the khansama of the dak bungalow, who will obtain ekkas to do the first stage or the Tahsildar might be applied to.

Guirat to Bhimber—284 miks.—There is a mail tongs, the latter 12 miles, the root is very bad in wet weather. At Bhimber the outer hills are entered. The general character of the country is low jungle-covered spurs, behind which rises a serie-of low ridges of bold outline, running parallel to one another. Bhimber is a small town belonging to Jammu. There is a square rest-house consisting of four rooms with verandabs and bath-rooms, but no khausama or supplies. Transport difficult to get.

Karian-21 miles, 2 stages, mail tonga, pack transport.

Bhimber to Saidabad—11 miles. Start early. After leaving Bhimber an hour's climb up and down, crossing the bed of a stream (in rainy weather forth are troublesome), brings one to the Aditak range, a stiff ascent of one hour. The descent is easier. It is a few miles more to Saidabad, where is a rest-house, and near it the rains of a Moghul sersi. There is no khansama, but the rest-house is similar here and for the next three stages to the above. A few miles up the valley a

Dogra fort may be seen, strongly situated on a hill. Supplies obtainable (chicken, milk, potators).

Saidabad to Naushara—10 miles,—The mad rather bed, and usually ascending. The second range called the Kaman Gosha, has to be crossed; the path to its foot is very pretty. The ascend is tough, and the descend long and trying; road vile. On this ridge fit trees are numerous. The view of the Pir Paujal range is splendid. The path now joins the valley of the Tavi, which is traced up to its source in the snow during the next few marches. At Naushern them is a massively built sersi. Cross river close by; difficult, if swellen with rain. The bungalow is in a shady plot do trees about a quarter of a mile from the river. Difficult to get cooles, faw supplies.

Meashera to Ghangu's Sarai—II miles.—The river makes a great bend, which the road cuts off by crossing a spur from which a fine view is obtained. The road then descepts to the river, and after many windings and frequent ups and downs, a plain has to be crossed, beyond which the bungalow is wishels standing some little height above the Tavi. There is a direct road, which crosses and re-crosses the river; but the water is often rather deep, and but a short distance is thus saved. The view of the snowy peaks to the north-cast is very magnificent. These are the main peaks of the Pir Paujal; such as Tatalaui, Smust Peak, Darhal Dome, dox, mostly over 15,000 feet.

Changes to Rajaeri.—14 miles.—The road lies up the valley, crossing numerous wooded spurs. The views are splendid nor is the valley itself unattractive. The march is, however, fatiguing. The bungalow is on the left bank of the river, beyond suspension bridge. The bungalow is really the pavilion of an old Moghal bagh. It has no bath-rooms. The town is very picturesque, there being some good buildings fronting the river. There is a dispensary and post office. The elevation is 2,206 fact, the lowest at which cheart trees are met with.

Rajaori to Thana Mandi—14 miles.—The 'path rises steadily, excessing the river twice, and leading into grander scenery. In

the morning it is shady, and the valley pleasant for walking; near the town is a large ancient serai. The ridge in front is the Ratten Pir. The bungalow is a poor one, barrack shape, with furniture, etc.

There is a mountain path by the Darhal Pass (see p 189). Cooles and pouses should be taken through to Sinnegar from Thana Mandi. This is grander scenery than the Pir Panjal, but a more difficult road. The routs is more suitable for travellers leaving Kashmir and having good cooles (it is not fit for pouses).

Than Mandi to Barangalla—10 nules —The Rattan Pir has to be orcs-ed It is 8,200 feet above the sea The road is not difficult, although steep. The road to Punch Dranches off to the left. The path often very bad. From the summit there is a wide prospect, especially of the Paulal range. The character of vogetation alters—grand forer twees, (ins., obest-nuts and decdars, etc., abound There is a ford, not shaws easy barangalls as a wall village shut in by mountains. The snow here deep here in winter. The bungalow is a fair one, with five rooms and two bad bath rooms (for Cnott Galli Route, see p. 72)

Baramgalla to Poshiana-10 miles -- Cookes should be taken through from here to Hirpm and also supplies. The road follows up the Sooran torrent towards the pass There are several waterfalls on this march, the best of which is within a few minutes walk from the bungalow at Baramgalla. The road is a rough one, with many bittle ups and downs. The stream has to be crossed about ten times, and in heavy rains difficulty may be experienced as the bridges may be washed away Leaving the valley there is a steep ascent to Poshiana, a small village only inhabited in summer A short cut, useful in descending from Poshiana, leads along the spur, where the main path descends to the left into the torrent bed There is but a diriy hut for travellers, and the only level ground for tents is on the roofs of houses, or a quarter mile below the village Supplies scanty It is very cold at night, elevation 8,200 feet A better camping ground 2 miles beyond village.

Poshiana to Aliabad Serai .- 11 miles .- One and a quarter mile of easy path; then a descent of three-quarter mile into the valley. Cross the Chitta Pani, which rises in the mountains on the left, and by a nullah straight ahead the ascent of the pass itself begins. If the ravine be filled with snow the path keeps to it, but later in the year it zigzage up the slope on the left, The ton is about six miles from Poshiana, and is 11,500 feet above the sea. The pass is worthy of its name. The summits on either side rise to 14,000 or 15,000 feet. Fir trees, and even birch, are left below. Till quite the end of May snow is abundant. As it melts, primules and saxifrage spring up and soon the pleatean is covered with rich grass and Alpine flowers. Above the pass is the region of dwarf mosses, lichens and rocks. A gentle slope leads to Aliabed, a distance of five nules. The view in front is shut off by hills. Behind, however, is a grand panorama extending in clear weather, far over the plains from Rawalnindi to Lahore : while nearer are the districts now become familiar by long marches and pleasant halts. The highest points of the Pir Panjal range are Tatakuti to the north-west and the Konsar Nag peaks to the east. Immedistely above the pass, on north-west, is a very lofty point called "Sunset Peak." It may be climbed from the Kashmir side. The Kashmir slopes are forest covered and in many of the hollows, near the summits, mountain tarns testify to the glaciers which formerly ploughed over the shoulders. None of these lakes are visible from the pass. Aliabad serai is one of the old Mughul rest-houses, which now does duty as a staging bungalow; but having neither doors nor windows, is most comfortless, and is also very dirty. At night high winds sweep down the pass, and make large fires a necessity. No supplies.

Alkaba Sarai to Hirpur.—13 miles.—The read continues down the valley descending about 2,500 feet. When raining, as the often it, the path is very thippery and in places it is brill upon the face of the cliff. On the way some old towers are passed, built in stormier days to defend the pass. Broken ridges and built in stormier days to defend the pass. Broken ridges and receipiers cled with sproze and silver fir, insegnandly from the torrent. For the first four miles the passhis irregular and stony; then it winds along spurs high up the hilbide; then steeply descending a river has to be forded and soon more level ground.

is rearled. It would be difficult to find a better camping-ground then that at Suk serat which may be reached from Resharat in one day a date not of about twenty miles. In going the opposite way the same plan may be followed. Cookes should than be talen through from Shiniyor to Barangalla halting at Suk serat the fir t night and it Poshiana the next. The river which has to be crossed and re ero sed below this often gives difficulty. The path is lovely through fir plades and meadows brilliant with flowers, such as adom. Digheh woods. Hirpur is a small scattered village four miles from Suksera. The hills around are much lower and although the vallet is not visible the view wickers out. There is no rest house of Hirpur and the best camping ground is before getting to the village. For Forest bungdow p rimssum must be obtained.

There is some interesting scenery in the neighbourhood, especially the Haibal (Ahribal) Polls in an Sedan

The 1 ath to Seduu leads off to the right across the wooded plateau It is about four mile

Hirpur to Shumyon-8 miles -Gridually descending the valley widers and the hills fade anal into sloping pleaseaux many only a few hundred feet above the myc which is fairly good I sees along the right bank a soon receids the plateau after which there is a good road for thre miles tlen a short story piece again fairly good for three miles then a stony finish. The lest camping ground is among some fine trees close to the large village of Shapiyon lut is dirty There is no bungalow It is often very windy here at night as the guste sweep down from the Hirpur Valley Shupiyon is a place of some size situat d on riving ground from parts of which there is a wide view of the valley from Islamabad to Sri n ger with the rocky snow capped ranges leyoud bordering on Ladakh From Shupiyon there is a choice of "everal routes (see page 74) There are paths from here to Palapura and Mil Nag on the west to Sedau and the Haribel Falls south to Namual ravine or Vernag east to Islamabad and Bijbehara north east. The man mad goes north west

There are unmetalled roads fit for carts to Kulgam to

Bijbehara and to Smnagar (see also p 76)

Shupiyon to Ramu—12 miles—Abont three miles from Shupiyon cross stony river bed; road then skirts low lulls and over rolling ground. Two miles before reaching Ramu cross another stony valley. The bungalow was burnt many years ago. There is a good camping-ground. Turn can be visated from here, It is about four miles south-west (see page 71).

Ramu to Srinagar—18 mules.—The first half of the way is across shadeless karewals, with a very level road, except one or two small ascents; then, descending to the plan, soon a broad road is reached, planted on either side with poplars or chenars. One or two picturesque villages are passed, and a comeal hill tumple crowned, is seen—this is the Takht. Nearing the city, the flood canal is crossed and the silk factory is seen on the left. Then comes a parade-ground and bazar. Entering Srinagar this way, the visitor will realise that he is entering a city heautfully situated, most picturesque, though dirty, and inhabited by an interesting race—the worthy capital of a country renowned throughout Asia for the charms of the scenery and the physical heauty of some of its people.

## PUNCH ROUTE.

Barly and late in the year the difficulty of crossing the lofty most pass of the Pir Panjal induces many people to turn sade from Thana Handi and to make a detour vie Punch to Uri on the Murree route. This is five marches and on to Baramulla is two marches more. Thus from Binnber to Baramulla is fifteen marches. But two of these are very short.

The ordinary route from Jheliun to Punch is given in Route 3—and goes via Koth. Continuing the Bhimber-Rajaon route to Pimeh we have—

Thana Mandi to Sooran—16 miles.—The path soon leaves the road to Baramgalla, end, ascending skeeply, crosses the Rattan Pir at a more westerly point. It then desceads through the forest to the Sooran nver, which is crossed by a bridge, There is a fair path, and the valley gradually opens out. The bungalow at Sooran centains four rooms and teth-rooms, but is in a dismantled and durty state. Travellers to Punch from the Kashmir side leave the Pir Panjal route at Baramgalla,

Earamgalla to Sooran—15 miles.—Path descends steeply to the river; it is rough for two miles; then crosses the Chitta Pani river, is better for rest of distance, except where, owing to a landslip, it crosses a spur. The scenery throughout the road is splendid. There is a direct path by Choti Galli into Kashmir crossing a pass 13,500 feet high (vide p. 469).

Sooran to Sahri--11 miles.—Path crosses the various channels of the Chitta Pani for half a mile; next seven-and-a-half miles, on the whole, easy. The main road then leads over a steepish spur, rough walking. A nearcr path fords the river twice. Last two miles generally good. Best camping pace is at face and of village near small branch of the river.

Sahri to Punch—9 miles.—Road soon crosses Ferozepore mullah; rough, three channels to cross. At the head of this nullah three or four passes lead into Kashmir, which are much used by goatherds and by the Punch grain carrying coolies. The passes are crossed on the third day from Punch (eee p. 68).

The rest of the road to Punch is easy and good.

The dak bungalow is below the town, and is fairly good.

Punch is the capital of the late Raja Buldeo Singh, cousin of the Maharaja of Kashmir; to whom he was tributary. He was a great sportatuau. The palace, gardens, fort and menagene are interesting. The height is under 3,000 feet, so the climate is hot in summer.

The hills and forest around swarm with black bear. The Raja yearly had one or two great bear drives, and from 20 to 30 were shot in a single day by four or five guns. In 1906 Lord Minto's party shot 40.

The direct routes to Jhelum or to Rawalpindi lead southwest down the valley. If going to Kashmir it is two or three days to Uri where the cart-road is joined.

Punch to Kahoota—9 miles.—Punch is situated at the angles of the Sooran and Bitarh rivers. Up the valley of the latter the road now turns. The river has been bridged.

The road is fair, but in places steep. It has been re-aligned and Kahoota is left on the other side of the nullah at the foot of the ascent to the Haji Pir Pass.

The bungalow is habitable. Coolies should be taken through from here to Uzi.

Kahoota to Aliabad—8 miles.—The road ascends directly after leaving the bungalow; soon after descends to a stream, then steady olimb. The valley narrows, and the scenery becomes grander. Good rest-house at Aliabad in forest.

Alishad to Hydrashad—7 miles.—This march is a steady ascent to Haji Pir Pass, 3,500 fact, on which snow often emains till the middle of May. After crossing the top there is a fine deedar and pine forest, through which the path descends to Hydrashad. The bungalow was quite destroyed by the earthquake of 1885. Camp close to the willage.

Hydershad to Uri-10 miles.—New path has been made. Formerly this was a rough march. Three miles from Hydershad there is a fine water-fall. After skriring the sides of the hill on the north of the river for several miles the valley opens out a little and Uri is seen, standing on a triangular platean several hundred feet above the Jhalum. Here the Murres route is joined. The new road is often blocked and until snow has melted in the spring, the old rough track is followed (for other Punch routes, vide page 67 and routes at end).

### CHAPTER IV.

## THE GREAT WATERWAY OF KASHMIR.

TMHE River Judium, with its affluents, canals and lakes forms a sort of arterial system to the valley of Kashmir. The name by which it is known to the natives is Vyath, a corruption of the Sanskrit Vedesta. The chief root streams from which it is formed unite near the town of Islamabad. From there it is navigable to the gorge below Baramulla, a distance by water over eightly miles; but us the crow flies, about sixtupiles. By water the visitor finishes his long journey from Murree, or the Dogra Rulers their journey from Jammu. By water the produce of the valley is brought into Srinagar, and the manufactures of the Punjab are distributed over the country.

The best way of describing the valley is to review it as seen in a trip up the river. Let us first glance at the physical features. At Baramulla the river is about 100 yards broad and 10 feet deep on an average. It winds with smooth, but not sluggish stream between flat, marshy ground, partly protected by raised banks, but which becomes lake-like in the summer when the floods come down. At first the course is almost north and the axis of the valley is crossed. The marsh gradually expands and deepens into the Wular Lake, the largest lake in India, which is half encircled by mountains on the north side. Thence the river up to its first origin at Islamabad flows near the ridges which dominate the valley on the north-east. On both sides of its course there are flat alluvial plains, partly cultivated, partly swamp; but in either case dotted over with numerous villages. On the south side these plains are bounded by a low line of cliffs beyond which elevated plateaux called karewahs, slope up to the Pir Panjal range of mountains. These plateaux are in some cases nearly 1,000 feet above the level of the river. At the highest part of one of them the author has found layers of semi-carbonized waternuts (singhara) such as are now found so abundantly in the existing lakes, but most of these plateaux are alluvial in origin.

The river plain is apparently quite level, for the slope is very uniform. At Srinagar, which is 5,235 feet above the sea. it is about 55 feet higher than at Soper, and at Islamahad 150 feet higher than at Srinagar. The river receives numerous trabutaries along its course. Those on the left bank are usually small: they drain the slopes of the Pir Panjal. The largest are the Suknag, from the neighbourhood of Gulmarg ; the Dudh. ganga, from Ludurmarg which flows into the south of Srinagar : the Rambiara. from the Pir Pass; and the Veshau, from Konsar Nag, which join and form a navigable stream, joining the Jhelum below Bijbehara. In most cases these rivers and their feeders cut their way deep through the alluvial plateaux bordering the mountain, but, emerging on the lower plain, become sluggish, and some of the smaller become quite lost in the marshes. The tributories of the right bank are of greater size and importance. They drain the mountainous region north of Kashmir as faras the Zoii Pass, to the north of which all the streams flow into the Indus, and on the east in the Chenab river.

The two largest tributaries are the Lidar and the Sind; of the strendler ones are the Harbuji, Arrah, Erin, and Bandipur streams, and Pohru river, the last of which drains the lolab and northern slopes of the Kaj Nag. These rivers will be further described. Duting the winter the Jhelum becomes very low, and sandbanks almost obstruct its course, but with the rains of spring and making of the snow it receives a great accession of volume, which continues all the summer.

THE MOUNTAIN RANGES.

Kashmir, as a mountain country only, would never have attained the pre-eminence which its unrivalled combinations of rich alluvial plain with lefty engs, clear streams and torrents with bread lakes, and shady cheanz groves with tauged prince from the sound for it. As seen from the Valley, the Pir Panjal shows an unbroken ridge from the gorge at Barramulla to where the smooth summits of the Banilal range fade in the distance. This great ridge varies from 9,000 at Banilal and 11,000 at the Fir Pass to 15,000 feet at the various smow peaks which break the akyline with serrated edgs, lotty cone and rounded dome, as if they were the silvered outline of some fairy city. The highest peaks are Tatakuki, about the middle

of the range. Sunset Peak near the Panjal Pass and Brahma Sukul further south, all of which exceed 15,500 feet and remain partially snow-capped throughout the year. On the opposite side of the Valley the highest ridges are further away, but many lofty spurs rise sheer from the emerald plain, contrasting, by their rocky barrenness, with the dark forest slopes of the Pir Panjal side. As seen from Baramulla or Sopor, Mount Haramukh, 16,900 feet high, though standing back nearly twenty miles from the Valley, yet appears completely to dominate the scene : and its summit, ribbed with snow and rock. and embosoming vast snow fields, is often reflected in the still lake as if close at hand. Even its lower spurs rise 6,000 feet above the plain. Further on is seen the ridge bordering the Sind Valley, and beyond that again the top of Mahadey. near Srinagar, which is marked by the small conical hill called the Takht-i-Sulciman. As one passes up the river other mountains come in sight, notably Wastarwan, the "mighty Wastarwan " of local legend, a conical mountain connected with the ranges behind by a low neck; and so again another summit, beyond which the Lidar Valley opens, and Mount Kolahoi. 17.800 feet, is seen, twin sugar losf peaks bearing broad snow fields and glaciers; while on the right the Valley is closed in by a profusion of precipitous crags and snow caps, whence flow the Arpst, Bringh and Sandrin rivers, which unite at Khanabal to form the Jhelum.

With this slight sketch of the physical geography of the Jhelum and its surroundings, let us return to the outlet of the Valley to mention the places of interest on its banks.

RÎVER JOURNEY.

Baramulla is the chief town of the Valley below Srinagar or Kamraj, as the whole district is called. It is a town of about 800 houses, situated on either bank of the Jhelum. Above the town the hills close in leaving but little space for building and half-a-mile below it the river becomes a rapid, dashing furiously through the contracted passage left by the cliffs on each side. It is then only navigable to the strong high-sided boats used in the wood-traffic. The passage of the rapid in these has been more than once accomplished by ladies, but in certain states of the river the adventure is not without risk.

According to tradition and the Rajatarangini in the reign of King Avantivarman, an engineer, named Suyya, attempted to deepen the river bed in this gorge in order to prevent the recurring floods. A similar but unsuccessful attempt was made by European engineers in 1902, but it has since been accomplished by the electric diredgers.

The town was almost completely overthrown by the great earthquake of 1853. Opposite the Sikh Fort, which was then ruined there is a massive wooden bridge of the usual Kashmiri pattern; on the opposite side are the remains of an Moghul seria. The town is not specially noted for any manufactures or buildings. Half-a-mile below the town, on the right bank, is an old gateway across the road, the remains of the ancient fortifications. Close by are one or two springs, impregnated with sulphuretted hydrogen, and held in some repute by the natives. The temperature of the water is uniform in winter and summer, about 65 Fahr. One mile further down, on the same side, are the remains of an old temple standing in a tank. They are very small. The neighbourhood is famed for bears early in the summer.

There is an abundant choice of boat here. Baramulla is a thriving place of buviness, being the chief depot of the trade with the Punjab. The orchards of the neighbourhood are famed for their apples. A direct road leads from Baramulla to Gulmans.

which will subsequently be described.

Dubgamis a little willage on the right bank some six or soven miles by river above Baramulla. It is at the junction of the Pobru river from the Lolab with the Jielum. Part of the journey to the Lolab may thus be performed by water. At Dubgam, are some extensive hop plantations originally planted by the Murree Brewery Company. The house then occupied by this Manager was so completely lovelled by the earthquake as to afford some ground for the popular statement that the earth opened and ewallowed it up bodily. Passing up the river the low hills on the left bank gradually merge into the open plain, and that again into marsh and lake.

Sopor.—The next place of any size is about eight miles by road, and half as much again by water from Baramulla, It is a town of about 600 houses. The river is here very broad.

There is a dispensary and a school near the bridge. On the left bank is a large mosque, or rather zizzt, called the Shah Hamadan. Most of the houses have been rebuilt since the earthquake. Sopor is the starting place for trips to the Lolab, Nagmarg and Gulmarg. Although the ground around for many miles is swampy, Sopor is a bracing, healthy place. A breeze, usually blows off the lake in the afternoon. Late in the summer mosquitoes abound, it is the favourite resort for anglers as the mahseer fishing is good.

For the Wular Lake and shores, see page 104.

During the early part of the year, and when the river is high, beats go direct from Sopor to Shadipur by the Nuru Canal avoiding the Wular Lake, or merely skirting a small portion of it. The limit of the lake is at Shabgund and Naid Khai, both of which suffered terribly from plague in 1904. East of Naid Khai is another large stretch of water. From this one canal leads north-east to below Sumbal, and from this the ancient ruins of Anderkut may be easily visited.

The Nuru Canal is more direct to Shadipur, about 8 miles on, where the river is rejoined. A small boat leaving Baramulla very early in the morning should by this route arrive at Shadipur before sunset.

If the lake has to be crossed it is well to leave Sopor in the evening, and to moor at Ningal till early morning; as even in the finest weather the boatmen fear crossing the lake later, in the day. The mouth of the Jhelum at Baniar is five hours' row from Ningal.

During the summer, if there is insufficient water in the Shadipur Canal, boats usually join the river by a small canal flowing into the lake near Madwan. This leaves the river at Hajan, a large village where there is good fishing. It is slow work travelling up the long bend of river between this and Sumbal, a large village eight miles or so upstream, where the river is crossed by a bridge.

Sumbal is the starting point for the trip by boat to the Manasbal lake, which is partly enclosed by the low hill called Aha Teng near by. Sumbal is a good place for fishing, and there are some fine chenar trees shading an encampment on the left bank near the bridge. Six miles up the river is Shadipur, on the right bank is the broad mouth of the Sind river, on the left the Nura Canal flows out. Below this marriage of the waters (whence the name Shadipur) is a small artificial island with a chenar tree, which, tradition says, nover grown. There is a fine bridge over the Nuru Canal. Opposite Shadipur there is large grove of chenars and a nice place for house-boats to moor in the cold Sind water, with pleasant valls.

Ganderbal, a few hours' journey up the Sind river, has a growing reputation as a good place for house-boats in the hot weather. But when the river falls in autumn there is some risk of large house-boats sticking in the sand, and only being dug out at great expense."

There are pleasant shady encamping grounds on the banks. The Sind river is only navigable as far as Ganderbal, whence people start for the journey to Sonamar, and Ladakh. Across the marches there is a way to Srinagar. It lends into the Ancher Lake below the city, thence by the Mar Canal to the Dal Lake. It takes about the same time as the river route. By road it is eight miles from Shadipur to the city; by water some distance further. Approaching Srinagar, the Fort and the templecrowned Takht-i-Suleiman are well seen. House-boats are sometimes moored at Shalteng, 2 miles below the city; in some respects it is a convenient place, but the river water is rather foul, and there is no safe drinking or cooking water nearer than the city. On the left bank is a bagh of popular trees called the Purana Chaoni. It was once the chief European encamping-ground and is now a State timber denot. Snaltener is a starting point for the direct route from Srinagar to Gulmarg.

#### CHATTABAL WEIR

was opened in 1916 by H. H. the Maharaja below the seventh bridge. The object of the weir is to maintain a sufficient depth of water in the river Jhelum and its tributary canals—Tsunti

<sup>\*</sup> A day trip can be made to Baba Darya Din vie Shahpur elimbing to 8,000 feet and South. East descent to shrine and spring.

Kul, Mar Nala and Kut Kul. The weir is lowered about the first week of every Hindu month. Its completion will increase facilities for navigation in and about the city of Srinagar for a period of at least six months. The weir will raise the water level to about 5,181 feet, or some 7 feet higher than its minimum evel at site so that even large boats will, in future, be able o traverse the canals and enter the Dal freely during the year.

The length of the weir is 453 feet. The lock is capable of passing boats 20 feet wide and 150 feet long.

The contract was carried out by Mr. Avery at a cost of Rs. 1,16,700.

Half a mile above Shalteng is a customs-house called Chattabal, where the road leaves the river bank and passes direct by the race-course and parade-ground to the first bridge. When the river is high, beats go direct by the Kut-i-Kul Canal, which leaves the river at the Shergarhi Palaco below the first bridge and rejoins it by the seventh or last bridge. The European quartors are all above the city. Some in the Chenar and Hari Singh Baghs, and others at the Munshi Bagh, more than a mile above the first bridge.

The time taken for a journey from Baramulla to the Srinagar depends very much on the state of the river and its banks, the size of the boat and number of rowers, etc. Baramulla to Sopor is half-a-day by dunga.

When the Nuru Canal is navigable a dunga with a crew of four ought to do the journey in one-and-a-half days or less.

If the Wular has to be crossed two or more days will be spent en route, but house-boats travel much slower and are altogether held up by high opposing wind.

Going down the river by shikari boat the Wular Lake should be reached in eight hours; or by the Nurn Canal, Sopor in nine hours. Baramulla is about three-and-a-half hours' journey below Sopor. Dungas take double this time.

If the Shadipur Canal is closed the Wassi Khan nullah from off Asham is available.

## CHAPTER V.

### SHINAGAR AND ITS ENVIRONS.

COMING up the river, the most conspicuous point of the view is the temple-convered hill overlooking the city. From it a hird's-ey view may be gained of the whole neighbourhood, which would give a better idea in a few minutes than any lengthy description could supply.

The Takht hill is a detached spur from the range bounding the north-east of the valley. On the east side the river skirts the mountains closely; it then sweeps round the slopes of the Takht, and, with several wide curves, flows almost due west, leaving a wide basin-like area between it and the mountains, which is occupied by the Dal Lake. The city of Srinagar lines the banks of these wide curves for four miles, and also fills the space between the river and the Dal Lake. Above the city, on the right bank, are the visitor's quarters. Highest up is the Sonawar Bagh, then the Munshi Bagh; then comes the Kothi Bagh, Hari Singh and Sheikh Baghs, the latter adjoining the upper part of the city. The Munshi Bagh is an orchard stretching for half-a-mile along the river, in which are situated the married visitors' rooms and encamping ground, and many residents' houses. Here is ALL SAINTS' CHURCH designed and built by Sir M. Nethersole, formerly Superintending Engineer.

There is a resident Chaplain, entirely supported by the European community.

Sunday services are at 8, 11 A.M. and 6-30 P.M.

The Bishop of Lahore usually visits every second year for confirmations, etc. There is a Church Council annually elected from the members of the congregation.

Behind the Munshi Bagh, at the foot of the Takht, is the NURSING HOME with accommodation for eight European patients. Subscriptions to help the Institution and entiting to accommodation at low rates should be sent to the Honorary Secretary. Medical attendance is also at reduced rates. Any qualified local doctor can send in European patients.

A canal leads direct from the river to the Dal Lake. It is only navigable when the river is moderately full.

Below the Munshi Bagh is the SHINAGAR CLUB. It contains the usual reading room, billiard and card-rooms, and there is a large assembly room. It is a well stocked Institution, both as to books and papers.

Application for membership should be made to the Honorary Secretary.

There are temporary as well as permanent members, vide Rules of Club

Behind the Club are the tennis courts.

The Residency is a polatial building with well wooded grounds. It replaces a house injured in the earthquake. The special features of the new one are the handsome carred pillars, wainscots and ceilings. The house of one Assistant Resident is on the east side of the Residency, and the Post Office on the other, with the pole ground behind. This is much used for cricket and occasional gymkhanns. Behind this is the long poplar avenue, in which are situated the houses of the Commissariat Officer and the 1st Assistant Resident; the small Roman Catholic Chapel, and the Settlement and Accountant-General's Offices.

More conspicuous is the large Horen opened in 1900 by Nedou and Sons. There is extensive and comfortable private accommodation, and the public rooms are spacious.

There is no dak bungalow at Srinagar.

The golf ground is to the north of the avenue. All the old poplars have recently been cut down. Below the Residency comes the Post Office, the Motor Agency, then the Hari Singh Bagh. On the river bank are the chief agencies and shops, and

easy to get them out, if the river is too high or too low. When the river is high, there is plenty of water in the canal which runs to the back of the Mushi. Bagh. At other times as the passage from the Mushi. Bagh to the Dal Darwaza takes over an hour, people send their boats round and walk or ride over. It is searcely more than ten munites' walk.

The whole of the area within the Dal Gate is lake or marsh, and is intersected by a net work of causla. The chief of those are: one, turning to the left, which leads to the city, another which skirts the suburbs and opens into the further parts of the lake; and the third, passing straight on by the foot of the Takhi and into the nearest division of the lake

We will visit these now in turn. Keeping to the left for half-amile, we pass under a bridge and, traversing a march, enter the city. The canal is here called the Mar Nullah. It becomes very picturesque, but should only be visited when full of water, as the dirt and smell is otherwise appalling.

Near its commencement is the Dilawar Khan Bagh, with the State School. Further on the canal is overshadowed by lefty houses, some raised on piles, or with projecting balcomes. many semi-rumous, some massive and built up on the plunder of old stone temples. It is crossed by several bridges, usually heavy stone structures, two of which are covered with shops. Here and there are stone ghats crowded with pictures que figures. Further down the city thins, and there are gardens adjoining the canal. The canal terminates in the Anchar, an extensive shallow march or lake, through which there is a way to Gander. bal and the Sind river. Near its termination is the Redgah. This is a wide park-like plain, where certain melas are held. At one end is the Ali Maspid, a fine mosque recently repaired. It consists of one large hall with lofty roof supported by deodar pillars. It was built in the 15th century. The Juma Masud is best visited from the Mar Nullah It is about halfway down on the right, and five minutes' walk from the canal. It is a fine massive building, one hundred and twenty yards square. with a grassy quadrangle in the middle. Its chief features are the rows of deodar pillars supporting the roof. Some of these stately shafts are 70 feet high. If visited on a Friday, for healthiness. There are one or two encamping grounds on the lake which, for beauty and salubrity, are far superior to the baghs in Srinagar, and which are readily accessible.

The Sonawar encampment above the Munshi Bagh is airy and cool.

House-beats can be moved anywhere along the river front and a site reserved if electric lighting is paid for. Shade is advisable for these beats. The best is near the island which is also a good place for camping. A mile above the houses is the Ram Munshi Bagh, which was a good place for beats, or tents, but houses have now been built in the best place.

Stinagar is very popular among visitors and deservedly so. For two months in the year—July and August—the climate is hot and somewhat humid, in spite of its elevation (5,200 feet), but in the spring and autumn it is very pleasant. Those who can obtain houses naturally make Srinagar their temporary home, but even for others it is the best headquarters. The attractions of the Dal Lake, the river and canals, make booting very enjoyable. There are few roads with pretty, or interesting rides. For all purohases of Kashmir wares Srinagar is the only market; so that travellers, whether merely passing through to more distant parts, or sportsmen, or those who merely want change of air and pleasaure, all find their natural centre in Stinagar. In this way there is a certain amount of society formed. Early in May arrangements are usually made for carrying on lawn-tennis, oricket and polo, for the short season of six weeks.

Beyond these public amusements there is little society unless, perchance, the Resident is socially inclined and goes in for entertaining. Nor, with such a shifting scene as Srinagar life shows, is much society possible; as visitors are so constantly starting out on expeditions, near or far, and, as a rule, do not care for tennis parties, dinners, &c. At Gulmarg the case is different, for there life threatens to be more monotonous, and having taken the trouble to climb 3,000 feet, people are not in a hurry to leave again. So the round of tennis, golf, races, and pionics is entered into with more vigour. Most people spend two or three months at Gulmarg.

There are many sights and places of interest, in, or about, Srinagar. The city of Scinagar contains about 141,735 people, of whom more than three-fourths are Muhammadans. It has few streets of any importance. A few years ago extensive fives Iaid portions of the city in ashes. In these places now paved roads have been constructed; many of the old streets have been paved, others, especially on the north side, are still narrow and fifthy. But further improvements are now being carried out. The river is the obief highway. Public buildings are few.

Above the fine Amira Kadal is the State Hospital, with good accommodation for civilians as well as soldiers.

Opposite this is the Court-house. The two chief bazars are that at the first bridge, the Amira Kadal bazar, and that below the fourth bridge, called Maharai Gani. Below the first bridge is the Shergarhi, a large walled enclosure, containing, on the river face, the palaces and houses of some officials; behind this a bazar and large courtyard, beyond which are some barracks. This is worth a visit. The palace was badly injured in the great earthquake. Part of it has been rebuilt and the new Council Chamber and Palace are effective. The view down river from the bridge above is picturesque. The projecting balconies of the nearer houses, with their quaint wood-work : the curved front of the palace, flanked by two towers, and broken into deep light and shade by lofty pillars, balconics and windows : the massive gilt dome of the squat temple adjoining ; the varied forms and colours of the State barges moored in the stream, and the long vista of broad river reflecting the irregular outlines of the city on its banks; and beyond again the fortcrowned Hari Parbat, backed by the distant mountains, sometimes grey, as in the morning, sometimes piled up with heavy storm clouds : a gain in the sunset light taking rich purple tonesall this makes up a picture vivid in colouring, to which the busy passage of boats gives continual interest and life.

The new and massive building with lofty columns is the palace, and beyond the gilt temple is the fine massion of the late Raja Sir Amar Singh, x.c.s.r., and his pretty garden villa.

Immediately below the Shergarhi, a canal—the Kut-i-Kul-diverges to the left, cutting off a great curve in the river.

which it rejoins above the sixth bridge. On the opposite side of the river a broad canal brings in the limpid water of the Dal Lake; a branch of this canal goes to the Munshi Bagh. One of the largest modern temples in Kashmir is the Maharaja's Temple, below the second bridge. Seversl of the chief shaw! merchants' houses are on either side of the river, near the bridge. Further down, on the left bank is the Mission High School, of which the Rev. C. E. Tyndale Biscoe is Principal. He was coxswain of a winning Cambridge crew in the Oxford and Cambridge race of 1884, and may often be seen coaching a crew of Kashmir lands on the river. The boys are good at all kinds of sport.

The Shah Hamadan Mosque, which stands on the right bank, is one of the finest specimen of Muhammadan buildings in Kashmir. It is built entirely of wood, the walls of wooden slabs being laid like bricks. There is some prettyl carving in the windows. The lofty roof is surmounted by a characteristic open spire with gilded ball. From the opposite bank the mosque with the fort in the background makes a pretty picture.

Lower down, on the left bank, is the Pathar Masjid, built of limestone. It was built by Queen Nur Mahal, and it is said that, for this reason, the woman-despising Muhammadans refused to worship in it.

Below the fourth bridge is the tomb of Zein-ul-Abedin, one of the most renowned of the early Muhammadan kings of Kashmir. The tomb, now rather ruinous, is built of brick. In the enclosure are some interesting fragments and inscriptions the oldest in Kashmir, in the Pali character, discovered by Rev. Dr. Abbott. The Mahamaj Ganj, or new bazar, is near below on the right bank. A fine stone lending place leads to a terrace facing the river with shops. Ten minutes' walk from here is the Juma Masjid. The Kashmir art manufactures can best be seen at Mr. Hadow's factory. This can be easily resched from the third bridge, Fatteh Kadal. It is close behind the city on the left bank, about ten minutes' walk from the river. The large temple in sight, on the right bank, was erected a few years ago by the late Landit Ram Ju, the head of one of the chief

families in Kashmir. From the sixth bridge the view up the river is specially fine. The background of mountains rise behind the fort or rather above the Dal Lake, is seen to best advantage, from about here, and towards evening the Bedgah may be visited from this point, or from the Mar Canal, in connection with which it will be described.

There is a well-equipped Zenana Hospital on the left bank below the sixth bridge, and a little lower down is the serai for Yarkandis, which is worth a visit when oaravans arrive there in the autumn.

There are seven bridges over the river. Their names are lst, Partab Singh or Amira Kadal; 2nd, Habba Kadal; 3nd, Fatch Kadal; 4th, Zeine Kadal; 5th, Ali Kadal; 6th, Naya Kadal; 7th, Saffar Kadal,

If horses were sent beforehand to Chattabal, the left bank below the last bridge one could have a pleasant ride back. The road here leaves the river at right angles. A hundred vards takes one to the road from Baramulla, and then to the paradeground-a wide grassy plain, bordered with Chenar trees; the race-course is round it. Towards the city end is the drill-house, at the further end is the shooting range. A bridge crosses the Dudhganga close by, and the road then leads by a fine poplar avenue, a mile in length, to the ghat by the first bridge. The troops drill most mornings on the large parade-ground. Before crossing the first bridge, the road to the right passes for two or three hundred yards down a broad bazar. This is the road to Shupiyon and the Pir Panjal. For the first few miles it is very good, broad and shady. Passing down it, beyond the parade-ground, we see on the right the Cavalry barracks. Further on, to the right, is the silk factory, beyond which is the wide spill canal, to prevent floods. Across this on the right hand, is a stone temple over the tomb of Gulab Singh, It stands in an enclosure with numerous apartments around for fakirs. Going a little further, one could return across country to the Munshi Bagh, crossing the river in a hoat. In doing so the direct road from the city to Pampur will be seen.

Pampur is seven miles up the river, and there is fair path by which a pleasant gallop may be had, going on one side of the river crossing at Pampur, and returning by the other benk. On the left bank of the river there is little more to be seen. One will usually return across the first bridge, passing through a hundred yards or so of crowded beazr, from which a good road, parallel to the river, leads to the polo ground and Munshi Bagh, or, if preferred, one can carter down the poplar avenue which leads the same way.

## AMAR SINGH TECHNICAL INSTITUTE.

This is situated in extensive grounds adjoining the Huzuri Bagh, not far from the left bank of the river. The institute is founded to provide training for students in the crafts of the country in Engineering and the Bullding arts.

An addition to the original fine class rooms has been made in the form of workshops for engineers, carpenters and potters where power machinery is being installed. The first Principal was Mr. Fred. H. Andrews. Application may be made to see this very interesting institution.

So far we have described the banks of the river and the roads, etc., on the left side only, as all this can easily be seen in one or two excursions.

We now pass to the excursions on the north side of the Munshi Bagh and City. Close to the back of the Munshi Bagh is the road from Srinagar to Pampur, of which more anon. Another road leads across the lower slope of Takhti-Suleiman through the village of Drogium over the Dal Gate, and by a causeway into the city in the direction of the fort. Keeping to the right one can thus ride to the Nasim Bagh on the Dal Lake. Half an hour's ride from the Munshi Bagh takes one to the Fort or Hari Parbat; or keeping to the left, the city is entered, and some narrow stony roads lead to the Juma Masjid and the new bazar. All these places cannot be visited at the same time, and many of them are more accessible by water; so we will describe them separately.

The TARRY-I-SULEMAN, standing out from the higher ranges, commands a fine view up and down the valley. It rises

over 1,000 feet above the plains. It should be climbed as early in the season and as early in the day as possible. It is quite accessible to climbers from every side. Men sometimes go up the face. There are, however, three prominent ridges, each of which gives an easier ascent. That on the west starts from a cemetery, which is five minutes' walk from the Munshi Bagh. Most of the way there are stone steps; the path is steepest at the beginning. On the east a path loads up the hill from a depression or neck, joining the Takht to the higher ridges. This path is nowhere very steep, though rather stony. Half way up, on the right, is a small copse of pinus excelsa. Another easy path leads up from the corner of the lake called Gagribal. In the morning the first of these is the shadiest, and consequently the coolest. In the evening the second road is certainly preferable. Going up, the view becomes more and more extended. The panorama of the graceful curves of the river, the broad green plain, and, especially in the spring, the great snow wall of the Puniab mountains is very grand. On the west a gap in the mountains indicates the Baramulla Pass, to the right of which are the markhor grounds of the Kaj Nag, and again to the right the snow peaks of Khagan bordering Yaghistan, are visible. Nearer, a blue streak in the valley reveals the Wular Lake, to the right of which is a frowning range of precipices. culminating in the heary Haramukh. Almost at one's feet is the city mapped into clearest relief, and the Dal Lake reflecting brilliantly the rugged mountains which rise from its shores.

The temple at the top is of great interest. It will be described elsewhere, side p. 111. There is also a covered tomb on the paltform near the temple, and just below it a pakka tank, now emply. There are numerous conveys of partridges on the hillieft, but it is all preserved.

At the foot of the Takht, on the west and ten minutes walk from the Musahi Bagh, at he Mission Hospital. This is close to the Dal Darwars, and is conspicuous from the pologround by its Red Cross flag and west tower. It consists of one block for out-patients (about 15,000 a year) and five paylions for in-patients. There is accommodation for 110 beas a well as quarters for the Lady Superintendents, the Surgeons,

. 5

&c. About 2,000 in-patients are received yearly and fed gratuitously. Over 6,000 operations are performed annually. The income, derived from voluntary sources and fees, is about fifty thousand rupees a year.

The pretty Hospital Chapel was designed by Sir M. Nethersole. There are three Mission Surgeons, who are always ready to show visitors over the institution, which during zecent years, has been visited by Barl Roberts, Lady Lansdowne, Lady Minto, Lord Kitchener, Lord and Lady Hardinge, Lord and Lady Chelmsford, and Lord and Lady Reading.

One pavilion is named after the late Maharaja Sir Partab Singh, a.c.s.r., who, accompanied by the then Resident, Colonel Barr, c.s.r., opened it in 1893.

### WATER EXPEDITIONS.

Up to the river, half an hour's journey, is the Ram Munshi Bagh. But the chief acquatic beauties of Srinagar are in connection with the canal leading to or from the lake. In order to visit the Dal Lake one might send on the boat beforehand to the corner before mentioned, and descend that way. The water-way to the Dal Lake is by the canal opposite the Sher Garhi Palace called the "Tsunt-i-Kul" or Apple Tree Canal. It is a broad canal, overhung by lofty chenar trees. Near the river, it is crossed by the Gao Kadal. In its windings the canal offers views of the Takht and the higher ranges, which, with the levely combinations of massive foliage and clear flowing water, make the Apple Tree Canal remarkable, even in Kashmir. Nearly a mile up, the Chenar Bagh begins, and stretches for some distance along the banks. Sometimes it is entirely under water, Taking a sharp bend to the right, the canal passes to the village of Drogiun, below which is the massive gateway through which the waters escape from the lake usually but by which they are restrained and preserved from the inflow of the river water when the Jhelum suddenly rises. In the floods of 1893 and 1903 this embankment burst and much damage was done in the Dal. The present gate, or "Dal Darwaza," was built by Maharaja Gulab Singh. The water sometimes rushes out with great fury, making the passage dangerous to small boats. This is the chief obstacle to taking house-boats into the lake, as it is not always easy to get them out, if the raver is too logh or too low. When the river is high, there is plenty of water in the canal which rums to the back of the Murchi Bagh. At other times as the passage from the Munshi Bagh to the Dal Darwaza takes over an hour, people send their boats round and walk or ride over. It is scarcely more than ten unjustes walk.

The whole of the area within the Dai Gnte is lake or mursh, and intersected by a net-work of canals. The chief of these are : one, turning to the left, which leads to the city; moother which skirts the suburbs and opens into the further parts of the lake; and the third, passing straight on by the foot of the Takht and into the mearest division of the lake.

We will visit these now in turn. Keeping to the left for half-a-mile, we pass under a bridge and, traversing a march, enter the city. The canal is here called the Mar Nullal. It becomes very picture-que, but should only be visited when full of water, as the dirt and small is otherwise appalling.

Near its commencement is the Dilawar Khan Bugh, with the State School. Further on the canal is overshadowed by lofty houses, some raised on piles, or with projecting balcomes. many semi-rumous, some massive and built up on the plunder of old stone temples. It is crossed by several bridges, usually heavy stone structures, two of which are covered with shop-Here and there are stone ghats crowded with nicturesone figures. Further down the city thins, and there are gardens adjoining the canal. The canal terminates in the Anchar, an extensive shallow march or lake, through which there is a way to Ganderbal and the Sind river. Near its termination is the Ecdenh. This is a wide park-like plant, where certain melas are held At one end is the Ali Masjid, a fine mosque recently repaired. It consists of one large hall with lofty roof supported by deodar pillars. It was built in the 15th century. The Juma Masjid is best visited from the Mar Nullah. It is about halfway down on the right, and five minutes' walk from the canal. It is a fine massive building, one hundred and twenty yards square. with a grassy quadrangle in the middle. Its chief features are the rows of deodar pillars supporting the roof. Some of these stately shafts are 70 feet high. If visited on a Friday.

54 GUIDE TO KASHMIR.

building are slightly raised and surmounted by the characteristic open wooden spires seen throughout Kashmir. They are conspicuous in many views of the city.

Juna Masjid.

about midday, hundreds of men will be found filling the west side of the building and joining in the chants or responses which echo grandly through the vast corridors. The corners of the

# J

visitors. The Juma Masjid should be visited at the same time as the Fort. It is situated between the south-end of the Fort Hill and the 4th bridge (Zana Kadal). The mosque was founded in 1388 A. D. (time Richard II) by Sultan Sikandar Shah. It was destroyed by fire in 1462 A. D., and the reconstruction

A visit to the Cathedral Mosque of Srinagar will interest

to was destroyed by the in 1402 A D., and the reconstruction completed in 1473 by Sultan Mohammed Shah. No record of the second destruction by fire seems to be available but the third fire occurred in 1665 A. D. (Charles II). Reconstruction was undertaken by the Emperor Aurangzeb in the same year.

The Emperor's work was so well executed that it has withstood until the present time. The ravages of 250 years have somewhat undermined the Emperor's excellent work, restoration work was begun in April 1916, and is well advanced.

Outside the mosque, on the west, are some interesting tombs of former kings of Kashmir. There is also a curious

miniature temple on a pillar two or three feet high. It is much the same pattern as all the old Hindu temples, but differs in having the pyramidal roof divided into three portions. It is not far from here to the Fort but it implies to more convenient to ride over, specially to inspect it. A pass, which may be obtained from the Motanud Darbar, is necessary.

The Fort is situated on top of Hari Parbat, a long trap

The Fort is situated on top of Han Parbat, a long trap ridge rising 400 feet above the plain. The buildings are very poor, and the walls, though thick, by no means strong. An immense sum was spent over the outer wall by Akbar. There are a few sepoys and some guns. The city hes chiefly to the south of the Fort Hill, and can be seen very well from it. To

the west are some gardens and the runs of an old suburb built

by Akbar. The view of the lake is specially good from here, the whole prospect is indeed very striking. At the foot of the hill is Makhdum Shah's ziarat, one of

the most popular of Mohammadan shrines. In times of sickness, &c., the people frequently resort to it for cure.

Since remote ages the sides of this hill have been the site.

Since remote ages the sides of this hill have been the site of popular Hindu shrines.

On the side of the lake are the suburbs of Kraliyar and Renawari. A ruined Shiah mosque there marks the scene of a great riot in 1874.

Bordering an ofishoot of the lake to the north of this is the Jail, where carpets, paper, &c., are manufactured. Thus his worth a visit. Permission should be asked from the Chel Medical Officer. The Laper Asylum, of which mention is made on the next page, is close by, and may be reached by Ferry Doat. The ghat below is known as Kujiyarbal. The whole mohala, or district close by the fort, appears to be called Kilainada.

There is a very direct road from the fort to the Munchi Bagh via Drogiun. From this road, near the fort, two others branch off east, one of which crosses the canal by the stone bridge called Naividyar and thence by a winding path through the manshes and by an artificial causeway, the Subo, cares the lake opposite the Nishat Bagh to the village of Ishbar, halfway between the Nishat and Shahimar Gardens. This road now brings the water to the city from the reservoir near the Nishat Bagh, and has been raised and made fit for riding. There is a good road skirting the lake to the same places, so that the Stoto is little used.

Another road, crossing the Bata Kadal, goes by a causeway to Hazart Bal and the Nasim Bagh. This is marked by signosts from the Dal Darwazz for soveral miles.

#### THE DAL LAKE.

The Dal Lake is a lake measuring five miles from north' to south and two miles from west to east; it is in parts shallow, and indining to be marshy; in other parts deeper, and everywhere it is of the clearest water. On three sides a mountainous amphibleatro backs it whose summit is from 3000 to 4,000 feet above the water. On the ground, at the foot of these mountains, at the edge of the lake, are numerous villages surrounded by orchards, and the several renowned gardens constructed by the Delhi Emperors. Westwards, towards the open flat, are first, the floating gardens-gardens made of earth and vegetable matter accumulated on water plants, then the half reclaimed marsh, alternate strips of shallow water and made ground, and then the city. The Dal is not one sheet of water, but is divided by causeways and projecting marsh land into three distinct portions; it is, moreover, so covered with aquatic plants that but little open water is visible by the end of the summer. Passing up the Nasim Bagh Canal in a small boat, it takes about an hour from the Dal Gate to the lake. At first the canal passes between small fields and orchards, then a mile from the gate comes the village of Renawari. On the left a temple stands out into the water. Close by is a busy landing place, where much of the lake produce is sold; then passing under a picturesque wooden bridge, and through the village, the three-arched stone bridge, called the Naiwidyar, is seen crossing the canal. The canal here branches, one portion the said Kadal Nullah turning to the left. On its bank is an old ruined mosque called Hassanabad. It was one of the few stone mosques in Kashmir. Close by it are numerous graves of kings and nobles of the 13th and 14th centuries. This canal opens out into a series of wide lakelets, extending round the foot of Hari Parbat.

The State Leper Asylum occupies one of the higher outjutting points of land; an admirably isolated and healthy position. It is under the superintendence of the Mission Surgeons. It has accommodation for 120 lepers. Some have been cured.

The main canal passes straight on through willow groves and gardens—alternating with open spaces of water for two miles and then opens into the lake. On the edge of the lake is a village with the large mosquo called Hazrat Bal. A supposed hair of the Prophet is kept there, and shown on certain grand mela days when half the city gathers to it. The Nasim Bagh\* is a little further on. It is a fine park-like expanse,

<sup>\*</sup> Vide Appendix II, Moghul Gardens, p. 234.

closely planted with magnificent chenar trees. It is well raised above the lake, and catches the breezes, from whence its name is derived. In the early summer months, before mosquitoes have become a pest, there is no more delightful encampment. Of recent years some yachts have been built; and their owners camp here for the sake of the sailing. There have sometimes been regattas. The masonry terraces and the fountains have disappeared, but the trees are in their prime, and the view from under their dense shade, across the open expanse of the lake, and up to the snow streaked top of Mahadev, is exquisite. In the middle of this part of the lake is the Sona Lanka or Char Chenar Island, an artificial island about forty yards square, banked up by masonry. Past the Nasim Bagh is a village and some large bouses; near by 18 an oil manufactory. At this corner of the lake flows in the Telbal river, or, properly speaking, the river Arrah. Boats can go up it for two miles ; it is exceedingly pretty, and there is good fishing. The water is intensely cold. The canal to the Shalimar Gardens is a mile east of this, and the canal itself is a mile in length. The Shala Bagh, as it is called by the Kashmiries, is a large walled enclosure on the sloping ground at the foot of the narrow valley which here emerges from the ranges encircling the lake. There are four terraces planted with orchard and Chenar trees. An avenue borders the long line of tanks down the middle. At the end of each terrace is a waterfall flanked by a summer-house. On the upper terrace is a fine hall surrounded by water and fountains. The pillars of the verandah consist of polished black marble from Pampoor. Formerly, the upper part of the gardens, whose name means the "Abode of Love," was set apart for the Emperor's Zenana. The place is worthy of Jehangir's fair Queen, Nur Mahal, to whose love of scenery and taste the Moghul gardens in Kashmir bear witness. Some years ago the banquet given on the King's Birthday was occasionally at the Shalimar Bagh. The weird scene on such occasions, where the glitter of myriads of lamps illuminated the brilliant dresses and fair faces, and the splash of the fountains, mingled with the songs of the dancers, will live long in one's memory. On one side of the garden is a heronry. In the court of the ladies close to the further side is a Turkish bath. The approach to the gardens is haunted by clouds of mosquitoes, which in summer evenings are a veritable plague. Horses might be sent out here. It would then be only twenty minutes' ride to the head of the water-works at Harwan. By motor-carit is only half an hour from Srinagar. The reservoir lake was constructed by throwing a solid earth and masonry embankment across the Valley. Surplus water escaped by a bye-wash, 100 yards broad, with two pretty cascades. The area of the lake was about twenty-five acres and its depth 30 feet. But since 1904 when the dam broke less water is stored. A covered masonry canal is taken off at the water tower, and winds round the mountain slopes to the settling tank at the Nishat Bagh.

In order to absolutely guarantee the purity of the water and safety of a city so liable to cholera epidemics as Srinagar, it was felt necessary in 1901 to remove every human habitation and atop all outlivation in the Valley above the reservoir. Even shepherds are not allowed to graze their flocks, so this grand catchment area of at least 190 square miles, much of which is under snow for half the year is now fairly free from any possible source of contamination.

It is in the canal and river above the reservoir that the trout breeding has been carried on.

The lake with its dark green water reflecting the lofty peaks of Mahadev, is one of the prettiest sheets of water in Kashmir. There is good fishing below the bye-wash. By road it is 11 miles to the Amira Kadal. The road is a good and interesting one, and so it is less fatiguing to go by motor than by boat, but we continue the description of the water circuit.

Passing from Shalimar to the Nishat Bagh,\* the boat goes under a stone bridge, where the Sutto crosses the lake and then enters the middle and longest portion of the lake. Immediately facing the bridge is the Nishat Bagh, or "Garden of Gladness," terraced up the steep slopes of the hill. There is a large house fronting the lake: then series of terraces with waterfalls and fountains which, as a rule, are only playing on Sundays. The upper platforms are covered with state-

<sup>\*</sup>Vide Appendix II, Note on Moghul Gardens, p. 234.

ly cheant trees, and the waterfalls are of considerable height. The top is high above the lake and commands a grand view across the Valley. This is the pretire's place on the lake for a picnio, and has the advantage of being nearer than the Shalima Bagh. Returning from the Nishat Bagh, the boat traverses the whole length of the lake. Near the middle of this portion, is the Rupa Lanka, an artificial island with a few small trees. Halfway between this and the Takht is a narrow starift through which the southern part of the lake is entered, and then keeping to the right, round the corner of the Takht one entered canal leading to the Dal Darwaza, which is less than a mile further on.

The places of interest around the SOUTH EXD of the lake may be easily reached by road. A bridle-path leads around the edge of the Takht, and is perhaps the prettiest ride in Srinagar. The carriage road along the south side of the Takht crosses the low neck by which it is joined to the higher hills, and skirts the lake. From the Munshi Bagh to this neck or the GAP, as it is called (Kashmiri, Art-gaj) is twenty minutes walk. From it a wide view is gained over the Valley and over the lake. On the left, at the foot of the Takht, is Gup-kar, the former distillery and wine manufactory. This name is probably derived from Gopaditya, a sixth century king. Below it on the lake shore is a pretty grove of plane trees. Continuing the main road to the right it passes several country houses with beautiful grounds, usually occupied in the summer by European visitors. Then comes the pretty village of Thid. A massive building, high up the mountain side, further on is the Peri Mahal. It was perhaps ercoted by Sufi Muhammadans for astronomical or astrological purposes about 1650 A. D. It consists simply of some massive terraces with recesses in the walls, some remains of tanks and summer-houses. The Valley beyond this in the bay of the mountains, is partly covered with vineyards; above which is the Chashma Shahi,\* a garden of the usual Moghul plan, placed there on account of the beautiful and copious spring which here bubbles up. The lodge at the front of the garden has been recently rebuilt. The gardens were in charge of a scientific French horticulturist, to whose

<sup>\*</sup>Pide Appendix II, Note on Moghul Gardens, p. 234.

skill their success was due. Better qualities of fruit are also being successfully introduced. The road to the Nishat Bagh is a good one and very pretty. From the Musshi Bagh to Chashma Shahi is about three miles, thence to the Nishat Bagh two miles, and from the Nishat to Shahmar two miles. A rider might return by the Nasim Bagh and fort, but if this is too far the Sutoo or embankment across the lake offers a much nearer alternative return road from Ishbar, the first village beyond the Nishat Bagh.

The Valley above the Shalimar Gardens is pretty. It is a pleasant but rough walk to follow the water-course supplying the Nishat Bagh round the corner of the hill towards Panzeam.

Enterprising walkers and elimbers will find several paths by which the manufactures above the lake may becrossed, either from the gar, the Chashma Shahu or the village of Beeu; descending either to the Penzgam Valley just mentioned, or the southern slopes towards Pampur. Zohuwan, one of the higher points, is 0,000 feet above the sea, and commands a grand panoramic view. The path up it goes straight up from the gap along the ridge, or a better one goes from the Peri Mahal. Quick elimbers will do it in two-and-half liours. Permission is required to enter the Rakh.

From the Chashma Shahi another long and easy ridge leads up to the Twin Peaks.

From Bren village an hour swalk up the slope leads to Raba Ghaham Din's stants. Thence there are two paths. One turns north up a steep ravine. It is two hours' walk to the top. It is possible to walk along the ridges in either direction. The path continues down a pretty ravine north where there is water. To the foot would take two hours. At the corner of the Valley are the Water-works at Harway.

The other path from Baba Ghulam Din's start ascends to the east. It is two-and-a-half hourt to the top of the ridge. The path continues down to the village of Khonmu in the open Pampur Velley. From the top of the ridge it is half an hour up to the summit of the mountain on the north. This is the highest point of the whole ridge (0,400 feet), and gives a spendid vice.

From the village of Ishbar beyond the Nishat Bagh there is a path to the top of the ridge. This was formerly the site of a shrine, Suresvari, and half-way up is the sacred spring Satadhara. The summit Barabal is 8.573 feet.

There is another path which leads up the Water-works Valley to Dachgam, from there it crosses a low col. (2,000 feet) to the Pampur Valley near Khonmu about 8 miles from the Harwan reservoir.

Pedestrians should always take drinking-water up these mountains.

Mount Mahadeo (about 13,000 feet) rises behind the Shalimar Gardens. Hindus make a yearly pilgrimage to one of its lower peaks.

Several Europeans have climbed it of recent years.

The Hinds route lollous the Valley absorble reservoir for two miles, then seemds a steep gas wayour. A much better route is the follow any :—lat day camp at Dara vallage one hour north of the reservoir. Height 6200 feet; Jaid day turn cast up a narrow meine, a fair path or might bank of stream. Two hours on are Gapra lusts. Path then cross-erand accould more it through against olseed. Use hour on il haves the testen and a second more attempt, against side on the north suite. At 10,000 obserted Gapra bats on a small steep many Ledons, with pine forcet. Good water. Here examp. It is easy to go to the west amunit of Mhadebo water and the stream of the str

By this it is 3 days from Dara to Lidarwat, pages 92-93.

Coolles for this expedition should be taken from Shala Bagh and Harwan; rassad should be taken for them.

Day trips can be taken to Takia Saxonish ris Telbal and Gos; also to Fakin Guiar fronte for Burzakut 10.763 feet) via Dara.

### CHAPTER VI.

# GULMARG AND THE PANJAL RANGES.

TROM Srinagar we turn to Gulmarg. Looking straight down the river from the Minnshi Bagh, it will be seen that the western end of the Panjal Range is a rounded mountain usually partly covered with snow. If the day be clear, halfway down that mountain a dark pine-clad ridge will be seen extending horizontally round the slopes, and with good glasses it is possible to see, among the trees crowning the ridge, a few huts. This is the outer ridge of the broad basin like depression called Gulmarg—the Meadow of Roses.

Gulmarg is about 8,500 feet above the sea. The mountain meadow to which the name properly belongs, is about two miles long, in places half a mile broad, and is somewhat crescentshaped. There is ample level ground for a race-course, polo ground, etc., by the side of which is a stream. On either side are rolling hillocks with scanty pine clumps, which merge on the outer or eastern edge into the low fire-clad overlooking the plain; and on the inner side into the dense forest covering the slope of the mountain which rises behind. To the north, a succession of similar meadows extends round the mountain side. Directly above Gulmarg at the forest limit, is another space called Killanmarg-the Meadow of Goats. A large number of huts have been built by visitors on the wooded knolls round Gulmarg, and especially on the ridge overlooking the plain. Of late years the Resident and most of the visitors have gone up there. There is a Church, Club, Post Office, Telegraph Office and Bazar. In June the place springs suddenly into life, and by the end of September it is again deserted.

There is a comfortable hotel kept by Mr. Nedou with a large room used for concerts, etc. The Church is on a knoll just below. The Maharaja and other Kashmir nobles and officials now have residences there.

# For list of available kuts see Visitors' Rules or apply to P. Appleford, Esquire.

The usual season rate for a furnished four-rounded but is from Rs. 500 to 000 upwards according to size and furniture. Most of the visitors' buts are bespoken early a year before, but there is ample space for erecting new ones or for camping. A circular road, commanding views across the Valley, runs level for four miles outside the rider.

The climate would be delightful but for the frequent rain. which is, at least, three times as much as at Srinagar. The scenery and flowers are levely. In natural advantages it is immensely superior to other Hanalayan hill-stations, The views across the Valley in clear weather, including the Wular Lake and the great snow-capped mural ridges beyond, are magnificent. The Nanga Parbat, a snowy peak, nearly 27,000 feet high, ninety miles to the north, is beautifully seen and may well fascinate even those who have seen Kinchinjunga from Dariceling. The margs are covered with herds and flocks which are gradually driven to higher pastures during the summer and descend in autumn to the Valley. Gulmarg is but one of many mountain meadows found at different elevations on the northern slopes of the Pir Panial. The elevated plateaux or karewahs, which extend to the foot of the hills are usually cultivated with maize, etc., to about 5,500 feet above the sen, At this point the forest begins, and there are usually pretty meadows bordering or interspersed among the lower forest slopes. Between the Ferozenoro Nullah, below Gulmarg, and Hirpur in the Pir Panial Valley, there is scarcely five miles without such meadows, some being of large extent, in most places the rivers from the snowy Panjal cut their way deeply through the forest-clad ridges; and behind these ridges at elevations from 8,000 to 12,000 feet, are broad, gently sloping mastures. similar to Gulmarg. The largest of these margs is the Toshmaidan, some ten miles south-east of Gulmarg. Further down the range might be mentioned Ludur Marg, Sangarwini, Kangwatan, etc.; some of them are decidedly prottier than Gulmarg, though none are so suitable for the purposes of a general sanitarium. The higher margs are under snow till midsummer. Many of these contain large ponds or lakes. The largest of these is Konsar Nac, of which more bereafter.

### ROUTES TO GULMARG.

Visitors to Gulmarg should make all transport arrangements some time beforehand. Luggage will go by akkas to Tangmarg, and most people go by motor. Some go by Bareilly cart starting in the evening breaking the journey at Magam, and arriving early next day at Gulmarg.

I.—(1) Srinagar to Magam.—14 miles.—The direct road is by far the most convenient way for travellers from Srinagar. It turns off form the Baramulla road about eight miles from Srinagar, and crosses the flood canal and the Suknag stream, thence leads across the level plains by Mazahama and Magam, where there is a rest-house and shady encomping ground. There is a Thelddar, and supplies can be obtained. There is a large good dak bungalow. Mosquitoes may be troublesome.

(2) Magam to Gulmarg—13 miles,—The road ascends steadly across the plateau or along the banks of streams passing numerous hamlets. Cars can only go to the foot of the mountain (ten miles) Tangmarg where there is a serai, with special arrangements for riding ponies, kahars and coolies. There is a small dak bungalow, a bridle path at a much steeper gradient for the last three miles enters the marg by a gully below the Residency. On the left of this is the Residency Surgeon's house. There is a shorter footpath which ascends steeply and enters the marg near the bazar. The ascent from Tangmarg is about 1,500 feet. It is rather muddy in wet weather, but in fine it is a beautiful forest path.

II.—Another route is via Palhallen.—This is a small village, accessible by boat from Shadipur, and about eight hours' journey below Srinagar. As the canal crosses the marches it is infested by mosquitoes. If many coolies are quickly wanted, it is necessary to send word to the Tabaildar of Bazamulla two days before. Palhallen is near Pattan, the stage between Baramulla and Srinagar. The temples there are worth a visit. One of them was almost overthrown by the last earthquake

and the ground near by was deeply fissured. A hundred people were also killed in this village. Patian is, however, quite two miles off the road from Palhallen to Gulmarg, which, on reaching the foot of the karewals, turns to the right for a mile or so, crossing a fair sized steam, then leaves the Baramulla road and turns to the left towards the mountains; it passes through a village, then mounts the karewals. It is a pleasant riding road. The distance to Bahamariahi is about four-teen miles.

Several villages are passed through. The path is steep in places, especially in the last two miles, which are through pine forest. Babamarish is a large sizart or shrine, named after Baba Pam Din, a noted rishi or ascetic who flourished in the time of the Delhi Emperore. There is a large building inhabited by the present rishis, and a range of guest-houses accommodating the numerous pilgrums to the shrine. In front of the monastery is a small open room for European travellers.

Babamarishi is 7,000 feet above the sea. The climate is fairly cool. Some, for whom Gulmarg is too high, may find it a pleasant encamping ground. From Babamarishi a well made bridle-path winds at a fairly easy gradient round the mountain to the left; ascending steadily, the view extends. It is about three miles to the top of the ridge, where it crosses the circular road, and enters Gulmarg loses to the chieft bears. Another path from Babamarishi turns to the right and rigzagging up the hill emerges from the forest on to a beautiful glade, whence a fairly level, grassy path follows up the stream to Gulmarg which it enters at the further end from the basar. This is one or two miles longer than the new road.

III.—From Soper viz Kentra, two marches.—Sopor is one day's journey by boat from Srinagar. Coolies for the journey can be easily got, and also supplies.

(1). Sopor te Kentra, 14 miles.—The road with a general south by west direction, winds scrose the flat for fire miles; then entering the narrow valley between karewahs gradually ascends, crossing the Baramulla-Sinagar Road, and passing the villages of Maopur, Wogra, Minnegam, etc. In places it is very pretty. From Minnegam, the path winds along the

side of wooded hills. At Kontra there is a good encampingground. In the ravines about here there are bears at the time when fruit and crops are ripening.

(2). Kentra to Gulmarg, 8 miles.—The road ascends, crosses a low ridgo, then follows up a pretty gien, called Nambalnar. Three miles on the ascent becomes steeper. It is then about two miles on to Babamarishi, where the Palhallen route is joined (see above).

IV.—From Baramulla via Kontra, two marches.—(1) Baramulla to Kontra, 9 miles.—From Baramulla the path, striking almost due cast, winds first easily, then steeply up the ridge to Gohan, a distance of four miles. It then keeps to the top of this ridge, whence there is a fine prospect; and joining near Shimlaran, the path already mentioned, turns east and gradually descends into a nullah, on the opposite side of which, amid a grove of walnut trees, is the village of Kontra. Here the road from Sopor is joined (see above).

(2) From Chota Kashmir.—Five miles from Barn mulla by the first tongs dak house, a path turns to the east, round the foot of the forests, and passes by the village of Badahama up a protity wooded valley. Five miles up this valley are several villages, in the immediate neighbourhood of which is a large obason made by the earthquake of 1885. Here the village of Laridura wasannihilated. This is well worth a visit. There are many place as suitable for eamping, either here or over the low ridge above, at a village called Shimharan. The second march to Guimarg joins shortly the path from Baramulla, and, crossing a low nullah, goes via Kontra and Bahamarish to Guimarg.

V.—From Rampur, two marches.—(1) To camp (Somar Ali), twieve miles about. To Naushehra on the cart-road is five miles (see Murree road). The path then turns up a steep ascent through the village, and then up the left-hand side of the ravine through deodar forest. After about one-and-a-half hours ascending the path becomes less steep for the next hour, but then again comes a long stiff sigzag ascent, which in wet weather is very slippery. Ladies should only come this route, or horses be taken, in very fine dry weather. Coolies would be taken from Rampur. The ascent is not less than 4,000 feet. Close beyond the top is a large marg with some Gujar huts, and a torrent below. Here camp. Height abour 9,500 feet.

(2) Camp to Gulmarg, about 10 miles. The path in places is properly level, but has frequent ups and downs; it leads northeast and then east through a seconcision of margs and fine forests, and crosses several streams. The path leaves the extensive Lilamarg on the right half-way, and finally enters Gulmarg below Dhoit Ghat.

### EXCURSIONS FROM GULMARG.

1. See Map No. 43 F/8, St. N. 74:20 E. The mountain as Communicating and the Galaxya, Apharvat, ness to 14,500 feet above the sea, This is nearly five hours' climb above Gulmarg, and three hours above Killanmarg. There are two paths to Killanmarg-one from Daboi Ghat, at the north-vest corner of the race-course, the other at the upper south-west corner of the meadow. Both these paths are catile tracks leading directly up the forcest slopes. The second one passes through one or two small meadows and a Gujar encampment. The climb can be done in an hour to the upper edge of the forest. The marg slopes up gradually and is covered with Alpine flowers. At the upper side there are usually many old beds of nevé (frozen snow) where I have seen tobogganning in July.

From the south upper corner a path may be seen ascending steadily to the left, and crossing the lower corner of the ridge, which it strikes at a height of 12,500 feet.

This is the bridle path to the Ferozepore Pass and to Punch. It may be seen from this ridge to wind along the grassy alopes of the valley to the south; travellers would encamp at the bettom of the valley and, crossing the Ferozepore Pass next morning would descend to the lattle village of Gagri; thence it is two rough marches to Punch.

From the point where the Ferospore route crosses the right is about an hour-and-a half's dimb to the top of the mountain or rather to that portion of it seen from Guimary; for the real summit (height 14,500 feet) stands a mile back from the ridge. The deep hollows on the north side contain two small tarms, which are frozan—still far on in the summer.

These little lakelets may be visited by another path, this follows the ordinary route past Dhobi Ghat towards Rampur for one hour, then turns up a narrow ravine by a well-marked track. It is more than two hours' climb to the little meadow and shepherd's hut, called Allopathar. Crossing this, and keeping round the shoulder of the hill, the path enters the long grassy valley, at the head of which are lakelets, still two hours' ascent beyond Allopathar. The valley is called Gagrimarg, and the lakelets Gagrinag. This is a long day's work.

While the ravines above Killanmarg are full of snow, the best route down from the top is by glissading. I have thus come down in twenty-five minutes a distance it took four hours to ascend.

3. The Ferozepore Nullah is the deep valley below the Residency. The gradual secent of 1,200 feet takes about an hour. Thence a pretty path along the bottom of the valley leads in about an hour to where the valley bifurcates. Here is a charming spot for an encampment or picnic, there is also fishing. From here the valley leading west is that to the Ferozepore Passes. The precatious foot-path skirts the rough ground at the foot of the precipices, and lies in places on snow which accumulates to a great depth and resists the summer heat. Where the river burrows its way under these snow masses it forms picturesque snow cavens and tunnels, best seen from the upper entrance, and about the end of June.

4. Some miles further up, five hours from Gulmarg, is Banibali Nag, height 9,600 feet, a small lakelet formed by landslips. From this place there is an alternative route back by the ridge above Killanmarg. The path up the valley soon ions the ordinary Ferozepore route.

The whole circuit has been walked in eight hours.

 Below Banibali Nag three ravines join—that to the left (south-east) leads to (Kantar Nag, a lakelet on top of the mountain (13,250 feet) from which there is a view over the Punch side.

The first day from Gulmarg the camp should be pitched up this ravine above the forest limit, at about 11,500 feet. The next day the lakelet and pass can be visited, and return to Gulmarg. The return journey from the camp would take about six hours.  Another two days' excursion might be made to Zamir Pass. This is by the Ferox-pore Nullah to its bifurcation and then up the valley south-west. It is two-and-a-half hours to the junction, where there is a log piridge.

Then a steep ascent of 300 feet in forest. One hour to Gujar Juts. Beyond this often remains of old snow-bridge height 8,000 feet). Keep up main valley to right on cattle tracks one hour. Ascend through forest and grass-vlopes two hours to shopherd's luts. clove to prominent pair knull. Here omny, height 11,000 feet. Next day the Zanur Pass can be visited. There is some very rough boulder work at the head of the ravine which the path on right avoids. Return to Gulmarg from Comp in five hours.

7. It is a longer excursion to the To-durvidan, 33'35 N., 135 E., and the journey may be continued right-slongthe unper marge to the Fir Panjal Pass. The chard difficulty is in arranging for coolies and supplies. Of course there are no regular bridle-roads, and only cattle tracks from one sheyherd encampment to the next.

Probably the best plan would be to make a private arrangement for baggage ponies, starting from Ferozypore, Kag, or Drang.

The following brief account of a trip by the author would enable a pedestrian, with the help of a good map, to find his way. The Kashmiri shepherdsonly knew the few miles nearest their own grazing-grounds. We wont by map chiefly. Milk and sheep are the only supplies to be got.

First day—Gulmarg to Camp (Bandi) ten hours, including halts.

Path up Frazpora Nullah, as in route to Zamir Pas, hear old anor-hridge cross streum. Then keep to the left (east) up side of valley. Steedy ascent to 10,000 feet in forest, then on manys with the mountain on the right and low grass ringes on the left. Two miles beyond eight of trees is shepherds' encampment (Bandl). A good pedestrian might go from Gulmany to Toshmaidan in a day, but sooiles would not keep up Another route is down to Tangmarg, cross the river, turn to the right, then by mountain paths ascend through the forest to a ruined tower, and then to Daswanmarg and Vehinar camp

then next day by Pejan over the Kral Nagal Pass.

Second day.—Start from Bandi north-east, ascending 800 feet to a grassy ridge. In front the left is a grassy ralley and marg with Ints and a canal. Keep cast along slopes, descend to and tollow up the valley. At the head turn north, then north-east to top of the Kmi Nangal Pass, about 12,200 feet. From this a magnificent mountam view cast and north-east. Descend 2,000 feet to a vast rolling grassy plain dotted with cattle and shepherds' huts. This is the Toshmaidan. The best camps would be on the ridge to its north, where there is shade as well as water. We crossed the ridge marked Lal Alam Shah. An easier path would be lower down to the marg and Gujar village, called Hakakhal, from which an easy ascent to the shepherds' huts at Dorein where we camped, height 9,500 feet. Ten hours, including halts fee also page 73).

This is one of the most beautiful and secluded of margs. Large cattle tracks lead over into Punch from here as well as

from the Toshmaidan (see page 69).

Third day.—An easy gradual ascent (three hours) over the shoulder behind Chanz, a rounded hill marked in map Chagga, then cross the ravine; a bridge over river from Tatakuti mountain (this bridge has long been in disrepair), then several miles of almost level moorland, Diskhal, height 11,000 feet. Drop down through forest to head of caual Miskan, cross Sangsfed river. Phras Nag, height 9,800 feet. Here are some Gujar hute in an open marg. A fine spring not far off, whence the name. Total five hours, including halts.

Fourth day.—Descend via Yusimarg to Nilnag (two-and-a half hours), or following down Yusimarg to Pakipur (four hours). Here there is a ziarat and village with few shops; camp

above village near canal in walnut grove.

### For Pakipur or Nilnag, vide section below. SOUTHERN KASHNIR.

The whole Pir Panjal range from the spurs above Baramulla to the Banihal Pass is wooded with grassy glades at intervals, and the slopes are generally very easy. At the foot are plateaux intersected by the deep navines. As the foot are plateaux intersected upper mups, many of tham as level as fullmars, then gravey slopes leading up the easy outstanding spurs, and narrow valley running to the more difficult mode, and snowy summits of the watershed.

Wild and jagged as is the lefty ridge, it looks from a distance merely a scrated line. None of the passes. except the Fir Panjal Pass, are below 13,000 feet, and most of the higher points are between 15,000 and 15,600 feet,

Some years ago all the peaks of this range wore virgin. Several of the highest have now been assended, the Toshmaidan Peak, also Tatakatti, Surset Peak, and one or two others. Some are so easy that a pony might be ridden up, others require skilled cragsmen with ropes, and many hours' hard work from the nearest possible camping-ground.

Lakelets.—There is glacial snow in many of the highest holoms, with numerous tarns, between 19,000 and 14,000 feet formed by old glacial moraines. Such are Gagri Nag (p. 63) above Gulmarg, and Kantar Nag (p. 63). Further cest are ten or twelve others. The largest of all is Konsar Nag (p. 76).

Passes,—There are passes used by goatherds every ten miles or so; these all lead down to the Suran river.

At the head of the Ferozepore Nullah are three, one of which is used for laden ponies ( see p. 08).

From the Toshmaidan thore are two easy passes; it is one day only to the nearest village on the Punch side.

In olden days Kashmir kings more than once took refuge from rivals in forts south of these passes above Mandi. There are some old robber towerson the Kashmir side, one as the Toshmaidan—overlooking Kasand one Lal Khan's Kila, further north-west, looking towards Fermspore.

- Toshmaidan to Nals Nar—ten hours, with coolies.— Slow easy assent. Eve hours to Nandan Sar. One hour to top of pass, 13,500 feet; steep descent, 2,500 feet, to a shepherds' but.
- Nata Nar to Gagri,—Five hours' steep descent through forest; huge rooks; cliffs festconed with creepers and ferns.
   Scattered villages. Here join other routes from Ferosepore Pass,

The next march is to Mandi, a large village 33 47 N., 74 20 E. The road is rough, but picturesque. Thence to Punch

II.—A better path, by which Kashmiris take cattle and laden ponies, is from—

1. Dorien to Nurpur—above six hours.—Dorien is a Gujar village one march from Riyar (see also page 73).

Thence it is an easy grassy ascent to the Nurpur Pass above 13,000 feet high, and one-and-a-half hours down to the village of Nurpur, only inhabited in summer.

- 2. Nurpur to Lohrin—six hours.—Path steep and rough in places, through fine forest scenery. Lohrin has been identified by Sir A. Stein with the ancient Lohars which played an important part in Kashmir history as the ancestral home and stronghold of a dynasty in the 10th and 11th centuries. From Lohrin it is about three hours to Mandi and another long stage to Puxen. The author came from the Punch side. It took the coolies altogether eleven hours from Mandi to Nurpur, and thence five hours to Chunz; and six hours down to Gogipatri (Nilnag).
  - III .-- Further east is-
- THE CHOTI GALLI PASS.—From the Punch side it starts from the usual Pin Panjal route.
- From Baramgalla.—Descend to river; cross it; a long sput leadsducnorth (the Pir Panjal route is to north-cast). Follow Gujarpath five hours to some huts in pine forest. Water is near.
- (2). Camp to Hilan (a camping ground)—Still up the same main spur. Ascend above forest. Camp by big shelter rock, Water is half a mile off in ravine below. Total distance eight hours.
  - In descending these two marches would only take six hours.
- (3). Hilan to Ludurmarg—A steep ascent, partly on snow, up ravine the hours to top of pass (14,500 feet); then turn north-west down snow beds, one hour to meadows (Chits-Kay) har), then two hours to Ludurmarg, passing goatherds' huts; then up to right on to a sloping plateau; which follow down to edge of pine forest, where are sentered huts. Total distance six hours.
- (4). Luddrmarg to Nil Nag—five hours. A descent through forest across Yusimarg, then steep descent to the lakelet of Nil Nag.
  - (5). NII Nag to Srinagar,-20 miles-(see page 74).

This route is more direct than the Pir Panjal Pass, but is rough going up and over the high pass.

From Scinagar the best bridle-paths to the foot of the southern mountains are-

(1) Via Magam—14 miles (see Gulmarg road, p. 64).—Magam to Kag, 10 miles.—Kag i. a large village, height 7,000 feet; a camping ground quarter of a mile west of village, by chenar trees.

Kag is about 15 miles from Gulmary on a path leading ria Ferozepore along the foot of the rango castward,

A large cattle-track leads up to the Yoshmaidan, four hours. It zigzags up the steep grass and forest slopes, ascending 3,500 feet.

(1) Via Watrehel.—14 unles.—Leaving the city by the bridge beyond the parade ground a bridle road goes to Wompar, six miles. One mile further is Badgam tahal. Then ascend plateau, path winds up and down. Watrehel stands high, a group of villages close below a low ridge, marked by a slarat.

Watchel to Toshmaldan.—Choice of two paths. Most direct is to Frang, ten miles; then steeply up the mountain six miles, entering the many by an old watch-tower (see page 60).

The other path goest o River, keeping almost due south, elevus miles and crossing the Suding asseeds by Rangarable, and round the corner of the spur, then turning west to the To-immulan, eight miles. This is the best path. From Sixing bridge to top of steep scent 4; hours, the hour along slopes, and I hour more ascent. Coolies would take much longer.

(3) Yin Yechgam — This path leaves the sity at the first bridge, passes the barnels on the last with the eart-wad on the right; crosses Batmain bridge, then turns left and across rice-fields, there miles; thun up and over the dry plateau, three miles down to the "tulge of Yookgau; then seemds gradually to the left, and enters the brood valley of Dregam, which village is some distance on the last. One might camp there among the splendid obspars.

The direct path keeps up the right side of the valley to Khan Baba. Sahib ziarat. There are plenty of camping grounds all along the road. The ziarat is about fourteen miles from Srinagar.

Then the path ascends steadily from some four miles, passing several little villages. Descending 200 feet of grassy plain is reached, beyond which the forest begins. Two miles on, over a montand, and then a stoop descent to a river is, Riyar. Total distance twenty miles.

The fine marg Decipatri is about 11 hours south of Riyar by forest paths, steady ascent. Further east is his patri.

From Riyar a fairly level path runs eight miles north-west along grass slopes with pretty yillages, and orchards and groves of whinuts, to Kag and thence to Gulmarg (see above). (4) Via Nagam.—Crossing the first bridge, turn left along Shupiyon road with its avenue of poplars to Kralpura, six miles, One mile on by big obenars take large path slightly to right. One mile on is a bridge All Kadal near. Wahtor villege. The path goes on south through rice-fields three miles to Trodat, where another bridge; then one mile to Nagara. Total twalve miles. This may be driven in a light chart.

From Nagam there are two paths; both are fairly good.

- (a) Nagam to Nil Nag. 8 miles.—This skirts the north alope of the plateau, past the villages of Badigam and Nurpur, two miles; half a mile further by 15th mile post avoid the broad track to south up valley to Hopla but keep south-west up ravine to Branjan, 2½ miles, and continue path up raving gradually ascending to village of Bazu, two miles; thence more westerly up slopes, one mile, to village of Gogjipatri. Below this is the lakelets on Nil-Nag, height, 6,800 feet. Here are two rest huts built by Europeans.
- (b) Magam to Patigura, via Tarar, 12 miles.—This is the main path. Immediately above Negam it ascends and crosses a plateau or karcolal, then plasses up a narrow valley; and finally there is a steep ascent to Tarar, distance five miles. This is a large village and a greet place of Muhmmadan pilgrimage; for here is strine of Sheith Nur-ud-Din, the most famous of all Kashmiri saints. The best camp is north-east of the town on top of the ridge, among some apple trees. Water its source and not good, but a new canal has been made. From Tarar to Pakipura, the road keeps along the plateau, gradually ascending towards the south. Camp above the village. Pakipura stands on the edge of a deep ravine, height about 6,500 feet.

There is a beautiful journey from here to Gulmarg along the lower mountain slopes. It would take four days.

The path leads by Yusimarg, west; then through forest, with occasional glades and Gujar huts, for one-and-a-half day's journey to Riyar, thence by Kag as mentioned above.

There is also a path across to Punch via Choti Galli Pass (see a bove).

(c) Pakipura to Shupiyon.—12 miles.—Descend the steep ravine south, then turn to right, and secend further back to a village.

For the next six miles the path leads through profity wooded scenery with extensive forest alones on the zight and low wooded hill on its left. Then leaving the forest it keeps to the left and joins the Rambiars river, keeps along the foot of the slope for a mile or two, then crosses the river valley across a rather stony, acrubby plain to Stuplyon (page 32).

(1) Shuplyon to Nilnag via Chawan.—Cross Rambiara river to left bank, follow Srinagar road for a short distance and then turn off to left through hilly scenery similar to pine districts of Kent and Sursey. Pess through villages of Narpura, Yeshur Maspura and Keller to Chawan.

General direction of road is parallel to Pir Panjal range, near the low wooded slope. Village of Chawan beautifully situated just within the forest and about six miles from the base of the mountains. Six hours from Shupiyon.

Small but good camping-ground. Bear said to be plentiful at certain seasons of the year,

(2) Chawan to Nilnag.—Descend a steep hill, cross the river Kachgal and ascend a similar steep hill on opposite side, half-hour. Another half-hour more or less on the level, then enter forest down another steep-hill, cross another river, ascend the other side half-hour to a clearing containing a collection of Goigr's huts called Nagoli.

Turn to left through forest along fairly wide path, following up left bard of stream, shortly afterwards reaching the entirance of the beautiful grassy Yusimary. Good going for 2 miles. At the top of the marg turn sharp to right—cross a ridge and then down a slope; turn to the left through forest, one mile along the ridge and then descend to Nilnag.

Actual walking time-4 hours; estimated distance-12 miles.

(6) Minng to Dudhpatri.—Badhi Patri.—Leave early. Over the hill at the hase for Geighpter on the other side then half-led across kearly through fields for ten minutes, then down a steep hill across the cive-Rangade my has other side through the village of Barwans, then across another knewah over the river Yecham to the other side of the valley, then sharp, left up the same and clongide of pine woods, then through jungle to Minjetti. More jungle to a marg, abortly afterwards reaching Riyar 4 hours, cooling 5 hours.

Beautiful spot for a camp, air sweet and crisp. Magnificent view of Nanga Parbat. Adjacent scenary very Swise like. Estimated distance to Riyar—10 miles.

Go due south up the valley, gradual ascent all the way—cross a ridge into another valley. Pitched camp to the foot of Chanz mountain—3 hours. Distance—5 miles. Good camping-ground. upplies—milk only,

This joins on to the route above mentioned, page 69.

SHUPIYON TO HARIBAL PALIS.

The path is for the first mile or two along the road to Hirpur; then it keeps to the left across the plateau for four miles to the village of Sedau, where camp 74:50 E., 33:40 N.

From Sedau, a path turns to the left (east) down towards the sogge, from which the Veshau river escapes. It then winds the toping from the first with a steep descent to a level place on top of the precipies, a distance of about two miles. Over a rock balustrade one looks down for 200 feet to the river, which here bursts its way between narrow vertical walls, and springs over a height of about forty. In the autumn the water is low, and the fall narrow.

These falls are, perhaps, best visited from the east, the right bank of the river. But there is no way of crossing till some miles down, opposite Rishnagar (see page 77).

Sedau to Konsar Nag, two marches (Map No. 29).

This is one of the largest mountain lakes in Kashmir.

Sedau to Chaitar Mag, 9 miles. For three miles a gentle ascent through forest, then descend 500 feet to Saidwas stream, a log bridge. Then a very steep ascent, one hour, through forest, to Ramkasan; than one-and-a-lail hour round slope of hill, leaving forest, and gradually reaching the Veshau stream. Camp in coppies of dwarf birch near river. Kangwattan is a Gujar summer village, three miles down on the right bank.

Obstar Nar to Konsa Mag, 3 hours—For first two hours a gradual ascent up the pretty grassy valley near stream; ponds on a level speec. The next hour up last 1,000 feet, is steep and rocky. The waters of the lake sceep hell-way un this barrier which is evidently un ancient and gigantic mornine. The lake is over two miles long and nearly 13,000 feet above the see. Beyond it is a norm of selective layer. The lake is often frozen till early in June. Above it, and complemous all over the valley of Kashmir, tower the three rugged peaks, of which Brahms Sakul (15,623 feet) is the highest. These are plainly seen from Salkot.

This trip may be well done from Hirpur on the Pir Panjal route. From Hirpur via Sodau to Shupiyon would be about thirteen miles, and could easily be done in one day, including the Falls. The Konsar Nag trip requires three or four days from Sedan.

Leaving Sedau with the Konsar Nag path but soon diverging to the right, is the Budil Pass route (vide route tables at

end)
East of Shupiyon are the following routes. Part of these routes need Map No. 29 if south of Shupiyon:—

A .- Direct to Islamabad.

B.-Via Kulgam to Islamabad.

C .- Via Kulgam to Vernag.

D.—Via Decsar District to Vernag.

A.—Shupiyon to Islamabad.—184 miles.—The road leads down through the baser, follows the stream short distance, then turns east, and proceeds across the knowahs, orossing the shallow ravines size Halipure, to Teregam, the first steps 10 miles, where it descends into the inte-growing district, watered by the Veshau canals; then across the plain four miles north-east to Khaimu where the Veshau is crossed by ferry. The read is then level and good to Kanbal, three miles, where is the dak bungslow, khausaman supplies and transport. Islamabad is 1½ miles on. This is a tircsome march.

- B—(1) Shugiyon to Kulgam, 12 miles—This is also an uninteresting marsh cossing numberless streams. It follows the path mentioned above to Hajipur, five miles, then diverges alightly to the right, and after three miles descends to far, and thence, across rice-fields, to Saigam, three miles; after which a better cand on a knownth leads two miles to Kulgam descend below the start to a camp behind the tabell. Good shade and water. There is good fishing in the Veshau between Kulgam and Khaimu.
- (2) Kulgam to Islamabad, 11 miles.—Ascend to the bezar, then descend through rico-fields over to Khaimu. Dunges can come to Khaimu in summer, and there is good camping-ground. Thence to Islamabad as given above.

The above A and B are driving roads, but would be bad in wet weather

being unmetalled. C-(1) As above, Shupiyon to Kulgam, 13 miles.

(2) Kulgam to Rosiu, 12 miles.—Cross the stony Veshau Valley to Bun Doesar, four miles; then up and over a wooded spur to Bringan Lanar, six miles a pretty enclosed beain; then over another spur to Rosie, two miles, or by a lower path by Pet Doesar and Sargam to Yor, the miles than Kulgan. The latter is the ordinary nath.

ten miles from Kulgam. The latter is the ordinary path.

A direct path from Bringan Lanar is about 15 miles, or six hours

to Islamabad, fording the infant Jhelum or Vyath.

Rozlu to Vernag, 8 miles.—Path crosses the low-wooded spur, then on by undulating ground at foot of hills, or better descend to Yor, a

pretty path, thence comparatively level.

- D.—Shupiyon to Mangam, 10 miss.—The path strikes south-east from the middle of the basts, seemeds and crosses in the first six miles, four or five shallow grassy hollows passing some villages, than on higher karwsh ground to Rishinagar. There is a steep drop to the Veshau, which is crossed by wooden bridges, then across the irregular stony valley, up the further bank, turn left two miles to Mangam where is good camping ground beyond village, or eamp at Wottu nearer the river or at Tangamer.
- (1) Excursions from Hamzgam to Haribal Falls.—These may be looked down on from the Sedau side, but are best visited from Managam. It is a beautiful lovel ride along the meadows at the fact of the hills for six miles to the gogge of the Veshus. Keeping pylits to held path deseemds to the top of the Falls. There is level ground for camping just above, by the Gijar village of Tangenary, but seaury supplies. Colonel Duke recommends a sampling-ground in the gorge half-nile above the Falls. From Tangenary to Anagwalton is above a hour (compare) page 76).

There is a fair path practicable for ponies following up the gorge high above the river. By this it is four or five miles to Kangwattan, a Cujar village in the beautiful grassy valley of the Veshau. From here KonsarNag might be visited in one day; or by the same pash through the gorge keeping round to the left, a pedestrian might go up the presty Chitik Nullah, and creat the ridge a few miles up, and descend to Managam. This is the usual route for laden ponice. The second from Managam, to top of spur is above two hours. The whole round only takes eight or nine hours.

There are beautiful margs all about these higher valleys. Another path up to these marge turns up the hill from near Kuri, a large village two miles east of Managam. The splendid guess turrets of Brahms Satu tower up to the south; and it is an interesting trip to the glaciers above Gogulmar; and Zojmars, one might take coolies from Mandarar.

(3) Manzgan to Aripur, 10 miles.—This is an easy and pretty march at average height of 6,600 feet. The first six miles over undulating ground to Hanjipur (so-called because no boatmen live there); thence south-east up the valley for two miles, then cross over a rather stony plain, two miles, to eam på Aripur.

This village is at foot of a rough path leading in two days, by the Monu Pass (11,000 feet) to Ramson the road to Jammu. Another path leads from Hanjipur, by Konsar Bal south, above 1½ hours, then up the mountain, over a ridge 8,000 feet, 3 hours, down to Lashmar, and along S. E. to Zommar, 14 hours: total 6 hours, without stronger.

Zojmarg to Partal Camp, about 3 houra—Gradual rigzag ascent; that along steep descent. This was all carefully surveyed in 1908 with a view to a railway and a 4 miles tunnel through the range, emerging ot Nandmarg but found financially impracticable. On the crest of the pass are some very tossiliferous limestones (Gondwana series). From Gulabgarh Rikasi a found days journey.

The Dandwar Nullah, about Aripur, is famed for bears. From Dandwar rillage it would be an easy olimb to Sundar Tope (12,740 feet), which commands an unrivalled view over the eastern part of Kashmir.

(3) Aripur to Rezlu, 12 miles—An ascent of 1,000 feet, to ridge Chuntong (map) error. Jordant; then steep descent 1,000 feet, beyond which pretty undulating country; partly forest with strips of cultivation in the valleys.

Rozlu to Vernag, 8 miles.—See above, Vigne, the traveller, was specially charmed with this fertile but still wild region.

The pretty undulating and well-wooded valleys of Lamur and Rozlu resemble the Lolab more than any other part of Kashmir.

There are many possible paths, which may be worked out with a good map, and local information.

#### CHAPTER VII.

#### EASTERN KASHMIR.

THE castern or upper end of the valley is narrower than the part below Srinagar chiefly at the expense of the allavial plain bordering the river, which is reduced to quite a marrow strip by the encroachment of the karewalı and mountain spurs. Numerous heatifully watered valleys, onen into it. offering opportunities for garden-making, which the Moghuls did not neglect, and which still, for natural beauty, claim a visit from the passing traveller.

The journey up the river is not of great interest. It occunies a day and a half, or two mights and a day for dungas, but house-boats often take three or four days. The time depends on the depth of water, and direction of wind, etc. Coming downstream, a dunga takes about 18 hours under favourable circumstances. For the first few miles the river is very winding. It grows perceptibly shallower at the upper part, and is not . navigable for large boats beyond Kambal-the landing place for Islamabad. The road to Islamabad follows the right bank of the river for twenty-five miles and is quite good for motors. There is a bridge at Sangam, above which the road lies on the left bank; the whole distance is by road about thirty-two miles and by water about forty-seven miles.

Only two miles by road from the Munshi Bagh but round two long bends of the river, is the interesting temple of Pandruthan (see page 115). To the left is a line of new barracks.

Five miles from Srmagar, where the mountain some come right down to the river, is a small village called Pantha Chak. where the remains of a stone bridge may be seen when the river is low. Beyond this are karewahs, chiefly devoted to saffron culture. Saffron used to be a considerable source of revenue to the State, but the sale has of late years much declined. The flowers are gathered and the stamens collected in October or November, and crowds go from the city to see the far-stretching beds of mauve blossoms.

The orange stamens sell at Re. 1-8 per tola.

Pampoor is a small decayed town on the right bank about eight miles from Stringar. It contains a somewhat handsome mosque. Below the town is a fine clienar grove where visitors encamp. On the bank, further up, is a lodge built for the Mahoraja. The river is crossed by a wooden bridge above the town. At the foot of the hills, which recede some miles from the river, is the village of Wean, noted for its medicinal springs. They are tepid and sulphurous. Visitors occasionally encamp in the neingbourhood for the sake of bathing. Two miles beyond these are other springs, esteemed very sacred, at the village of Khru.

The limest me ridges west and north of Khunmoo and Khru are of special interest to geologists owing to the splendia series of stata open to observation, containing some richly fossiliferous strata (wide Middlemiss and Hayden in Geological Re-

ports, 1908-1909).

At the foot of the mountain, between here and the river, are the old Hindu ruins of Ladoo. The main road will be rejoined at Latspur, 13th mile post from Srinagar. The large village of Kakapoor, on the left bank, about 12 miles up the river, is a good starting place for visiting the temple of Payeoh, one of the most interesting little temples in Kahamir. It is about seven miles from Kakapoor, and the road there is good. It is rather nearer from Patgampur on river, near Avantipur, the.oe to Malangpur, and then over karevah direct to Payedh, about five miles. For many miles the river now skirts the foot of the Wastawan mountain. At the southern oud of its slopes, are the extensive ruins of the once famous city Avantipur, there is now but a small village, below which are the remains of two ruined temples, by the 18th mile post (see Chapter IX, page 114). The temples should be earefully studied

Above Avantipur opens out the valley of Trahal, up which there is a path to the mountains beyond (see Lidar valley

routes).

Bijbehara is a town of several hundred houses, 29 miles from Srinegar. There is good encemping ground near the Maharaja's lodge above the town. On the opposite side of the river, which was once crossed here by a stone bridge, are some yory ancient Hindu remains close to a new temple. There is a wooden bridge at the town, from the piles of which grow some large trees. From Bijbehara there is a road up the right side of the Lidar Valley. There are some few merganizant runs at the mouth of Lidar, where once, tradition says, there was a lung stone building.

I damahad is four miles by road above Bijle-hara. By river it is 47 miles from Srinngar, and by road 32 miles. By the river side is the little village of Kanhal, where there is a resthouse. Half-way between this and the town is the Wazir Bagh, an orchard and encamping ground, by which houts can be moored when the river is full

Islamabad is the second town in Kashmir; it contains about 20,000 inhabitants. It is built round the frot of a comeal hill on whose side are beach-marks showing the level of the lake which formerly covered the valley. The town is picturesquely embedded in trees and intersected by running streams. From the foot of the hill issue numerous springs, which are received into stone tanks. The space round has been formed into eardens with houses for the Maharaja, and temples, etc. In the town are other springs. Over one a mosque has been built. Another is sulphurous. The water, especially in the tanks. swarms with a sort of curp which is considered sacred. The town owes a good deal of its prosperity to being the starting point for the Jammu route. Some weaving is done and braided table-cloths and floor-cloths are worked here. Islamabad is the best centre from which to west Vernag, Atchibal, Martand and the Lidar Valley. Just outside the town, on the Bawan road, is the pretty Zenana Church Mission Hospital. The lady doctor in charge, Miss M. Gomery, M.D., is glad to show visitors over the Institution.

The conical hill overlooking the town commands a very wide and striking view; it is easily ascended from the karewah behind the hospital.

For Kulgam and routes south-west, see last chapter.

Islamahad is a good centre for many trips-

(1) by Kulgam, Dandmarg, Mansgam, Haribal Falls, Kangwattan, Konsar Nag, and back by Shupiyon to Arwin or to Biibehara:

(2) by Kulgam to Dandwar Nullah, then north-east by Aripur to Bringan Lanar, Vernag, Kokar Nag, Nowboog, and back by Shangas;

(3) by Vernag to Wangam Soondbrar (p. 83) to Wakinringi (towards the Marbal Pass), back to Nowboog. Visit Doosoo and Rajparan, then back to shangas, and up to Chur Nag (p. 86) returning by the Margan Pass to Gauran (p. 150);

(4) by Atchibal and Kokar Nag to Nowboog; then by Halkun Galli to Kutihar, and back by Martand; or by Paisan across the ridge to the Lidar Valley at Sallar, and thence to

Hapat Nar, or to Eishmakan.

Any of the above suggested routes might be done in 10 days or a fortnight, and extended very pleasantly to three weeks by pushing further afield.

Vernag is nineteen miles from Islamabad. The direct road leads across comparatively level country with a low plateau to be crossed about the middle. The first half of the road is through fertile and often pretty scenery. The latter part is across stony and barren river beds.

Vernag is named from the copious spring which rises at the foot of the Banihal Pass, in a fine stone tank which, with the buildings and gardens, was built by Jehangir. The situation is lovely. There is good accommodation in the bungalow 3 miles south-west on the Jammu road. Vernag was a favourite residence of its imperial founder, who desired to be carried there when dying.

The direct road from Islamabad to Vernag, which I have mentioned, leads up the valley of the Sandrin river, and within three miles of Vernag passes close to Shahbad, a very large village with houses and mosques, which testify to its former

importance.

Shahabad is the starting point of two paths by which the ridge separating this from the Bringh Valley may be crossed. Both paths ascend steeply for over 1,200 feet; then one, turning east, descends gradually to Nuru, thence by Kokur Nag goes to the Nowboog Valley. The other goes direct to Atchibal.

From Vernag to Kohar Nag is 73 miles.—The ascent and descent are easy. At Kokar Nag there are some beautiful springs with a good camping-ground close by. On the opposite side of the nullah, two miles off, is Sofahun, where are some former iron mines, the chief in Kashmir. A little distance from this place are also some remains of an ancient temple. Up a

gien to the south east of hok r Nag and r ached sia Wangam. is Sondibrar a ve; sacced information spring. It would be about 5 hours from hok in Nag to the spring and back or 1 hour from Wangam when there is a good camping ground

#### ROUTE TO KISHTWAR

From Kashnur th r are two rout s of which that by SIN

One route to the Ward can and Kisltwar h sup the valley and across the Marl al P s (11 J.0 f et). The summit of the page is crossed on he fourth are ch from Islamibel (Map Vo 29).

30 30 N 75 33 E

Markel route to Kishiwar —I went this route in 1903 doing rather short march s

- (1) Islamabad to Akungun large villag 21 miles beyond atchibal total distance 11 miles. Here tool on cookes for the trip
- (2) Akıngam to Wangam, 5 hours about 12 miles From here Soondhar spring m \ canly le vivited
- (3) Wangam to Karabudurum —5 hours 10 nules tvery pretty alpune valley sparse cultavation for five 2 hours, then over a shoulder and 17 the Vacrbal girn with forest and gress At 8 500 Walainrings a pretty littl many Kamburlurum a smrill many 9 200 f et Gujur linits a short distance up side valley
- (1) Camp to Sungapur, 44 hours 12 miles 4 after ascent property on snow cooles tool J hours Hu, but of top 11 5:00 feet Steep descent 1 hour to snow un ravane Here found the small rese rhododendron the true algune rose Pine scenery, steady descent 4 hours through forest by stream Large village Camp under elms among nos helds 6 900 feet
- (6) Singapur to Mogal Maidan, 5 hours 11 miles —Descent step to Chrim 14 hours in et Tangam route Coolies took 3 hours Then to left bank, 2 hours to Vogal Vardan a few scattered huts for supplies no coolies

(6) To Kishiwar see below

The chief route to Kishtwar is by the bridle road made by Colonel Ward. Ponies can be hired for the whole journey at Islamabad or at Atchibal. The stages are as follows :-

(1) Kanbal bridge, Islamabad to Kothair, 10 miles,-This is 3 miles beyond Atchibal, where the traveller may prefer to halt. At Kother is an ancient Hindu ruin, a short distance to the right from the road,

(2) Kothair to Doosee, 12 miles.—A good road through open and rather pretty scenery among low hills, then crossing the Nowboog Valley and 2 miles up side valley, to Dyes or Doosoo, about 7,400 feet. Forest rest-house on Marg about a mile above the village. There are beautiful

camping-grounds higher at Rajparan and at Dhaksun.

(3) Doosoo to Sinthan, by mule path 14 miles, or by footpath 11 miles. -A centle ascent for several miles past Raiparan, cross a low ridge with rise of about 400 feet, then pass Kodan camping-ground. Then keep to the left up Harshan glen, then by a short zigzag to the pass height about 12.300 feet. The footpath goes straight up the nullah, on snow till late in summer. In maps marked Chingam Pass. The pass is usually closed by snow from the end of November till April. The view is magnificent. Descent in to Sinthan glen easy for pomies; both a bridle road and footpath. There are supplies till Tsingam. Soit is better having camped at Rajparan or at Kodan to push to that place, 10 miles, paying 14 stages. Forest rest-house at Sinthan.

To Marau a route goes over Hoksar Pass.

(4) Doosoo to Harshan glen 8 miles. (5) H. G. to Kulnag. 14 miles, climb 2,000 feet then descent.

(6) Kulneg to Marau, 11 miles, climb 2.500 feet.

(4) Sinthan to Chatru, 13 miles,-At Sinthan, or Sirithan, there are

some Gujar huts. A steady descent; pass Tsingam at 7 miles. The stage is just below junction of valley leading to Marbal Pass. Supplies scanty.

Chatru is a small village, supplies available, but few coolies. Camp-

ing-ground between the road and the stream.

(5) Chatrute Kishtwar, 16 miles (6 as.).—This will be found a long and tiring march in hot weather, and the journey can be broken at Mogal Maidan, 5 miles down the valley. The scenery here becomes very rugged and picturesque, especially just below Mogal Maidan, where the stream flows under a towering precipies. Four miles below this the Wardwan river is joined, and two miles on it is crossed, then 1½ miles on the Chandra-Bhaga river is crossed at a most picturesque gorge. Thence there is a steep climb 15,000 feet to the plateau on which Kishtwar is situated. Camping ground under chenar trees on the maidan adjoining the town. 5 miles from the bridge. Water has to be brought from some distance, and should be boiled.

Some of the grandest scenery in Kashmir is met with on this route, as there are very lofty peaks of 21,000 feet seen rising sheer from the deep

gorges of the Wardwan and Chenab.

When going from Kishtwar to Kashmir, camp at Taingam (Chingam), then 5 hours, to camp above Sinthan or forest rest-house below camping ground at foot of pass : next day to Doosoo, 9 hours, less for ponies.

Kishtwar is a small town on a plateau mear the junction of the Wardwan and Chandra-Bhaga rivers. There is a post-office, dispensary, etc. Other routes diverge from here (see page 151).

Another route to the Wardwan lies up to the Nowboog value and across the Margan Pass (11,900 feet) (see page 190). This also would be crossed on the third march from Islamaked. It is quite practicable for posies in summer; but in spring, when the snow is deep, it is often dangerous. The descent on the Wardwan did is were storn.

The Nowboog valley is protty. It is on an average two miles wide, of park like scenery somewhat spoilt by rice-fields, backed, however, by very ranged peaks. Owing to its altitude the climate is cool throughout the summer. The village of Nowboog is 11 miles from Kokar Nag. At Lohrin, 1 mile short of Nowboog is good carating-round.

From Nowboog there is a path over the hills by Halkun Galli to Kuthar, the valley of the Arpat river. By this it is 1 mile to Atchibal. Within 3 miles of Atchibal is an ament temple near the old iron-works of Kothair.

Afshibit may be reached direct from Vernag via Shahabad, 12 miles. The ordinary route is Islamabad to Atchibel, 7 miles. One mile from the bazar the path crosses the Arpat river, then south-east over rice-fields, 6 miles; good unnestable order.

It contains a beautiful pleasure garden\* and encampingground at the foot of the spur, where the mountains introde
furthest into the plains. On every side copious springs gush
out from cletts at the foot of the limestone rooks. These form
beautiful streams and excades, which, with the growes of
magnificent chanar trees, are the chief attractions of Atchibal,
Outside the gardens there is a bungalow for European visitors.
It is considered most probable that the springs are, in part in
least, derived from the Bringh dver, one brauch of which disappears in a chief of its bed. The limestone around this deof Kashmir appears everywhere to be honeycombed, so numerous and copious are the springs.

The valley of Kutihar, which opens to the north-east, is very fertile and pretty. At the head is a difficult and lofty pass to the Upper Wardwan.

<sup>\*</sup> Vide Appendix II; Note on Moghul Gardens, page 235.

Shangas is a large village, 3 miles from Atchibal, where grain, etc., can be obtained. Sangam is 4 miles further.

An excursion may be made as follows from Sangam, at the head

of Kutihar :-

Sangam to Nilhul, 4 hours.—The first three-and a-half hours steep; water source; fairly level camp in forest; a small supply of water near; height 9,000 feet.

Nilhul to Chur Nag, 2½ hours.—In one-and-a-half hours leaves forest hehind; then steep grass ascent The Nag is a small tarn, surrounded by not very impressive ridges, at a height of 12,300 or 12,400 feet.

From Chur Nag an easy walk of three-quarters of an hour to the

Morgan Pass.

Camp near here, height 11,200 feet : water abundant, but no wood

near; return to Nowboog next day; an easy descent.

From Gauran in the Kutihar Valley there is a path across the hills to the Lidar Valley at Salee. It leads through a galli which is of geological interest.

Martand .- A path leads from Atchibal to Martand which may be seen standing on the karrwah behind Islamabad. It is above five miles. The direct road to it is from Islamabad. It passes for 2 miles along the foot of the karenah, and then ascends and crosses it another two miles. The whole plateau is now irrigated by a fine canal, brought from the Lider above Eishmakam. The view from Martand is grand, but the ruins although noble and massive, do not show to great advantage.\* Two miles north of Martand, at the corner of the Lidar Valley, is Bawan, one of the most beautiful camping-grounds in Kashmir, There is a direct cart-road from Islamabad to Bawan, 41 miles. this is the main road to Pahlgam. At the foot of the benchmarked chiff is a magnificent grove of chenar trees, and hidden away in the foliage are two tanks of clear flowing water, surrounded by a temple and pilgrims' houses. The water escapes by stone-lined conduits, and flows among the trees and round the green swarded encamping-ground. The water abounds with fish. Nearby is a portion of the Lidar river in which it is permissible to fish. There is an Engineer's bungalow, ten minutes' walk above Bawan.

Half a mile from Bawan, along the foot of the hills near Rhaumajo, is a group of caves. One of these is over 200 feet long. The end of it can only be reached by crawling; doubtless

<sup>\*</sup>For description of temple, see Chapter IX, et seq.

the cited in the rocks which was caused by the action of water, extended much further but as that point is a closed by loose stones shahen from the roof perhaps by some authquale. On one acts of the passage is a small clustor probably artificial continum who belones of some devotee or hermit. I this distance beyond this case is another continuing a temple the porth of which has been curred out of the rook. From close by the 'emple there is a fine use of the I date Valley which for fifteen miles is broad and fortale and well retored but beyond that the mountains close in towening up incentiously to a great beight. On the valley fortwinded distant in ea the benutif il snow, double come of Mount Kolndu (17 839 f et) from which great glacures a ream into the valley beneath

## THE LIDAR VALLEY

This is one of the fine t vallew in Kashmir or in the Himalayas. Above it takes its origin in large placers, then flows through hroad grassy mans; and down by in my a rigid and cataract between high rock walls and on through him blades, and sombre must forests till it emerges into the bright wide valley belot. Exhimalan, and sparl les more soberly, but still wild one must broad stony beds and narrow ounds to juin the Jackum or Tyet.

Its total length is somewhat over forty miles. The main river is formed by the junction of two large tributaries below Pahlgam These which might be called the Kolahou and Sinsha Nag ctreams 'flow respectively from the north west and north east and after joining tend almost south. Up the eastum branch lies the great pilgum route to Amannath. The pilgumage takes place during August. Thousant's of Hindu sadjus and others come from all norts of finds for it.

SUVIVARY OF ROUTES	Wiles	
Islamabad to Enhuskam	l.	
Eishmal am to Pal lgam village	12	
Pahlgam to Tanın		approx
Tanın to Pa nıtarnı	16	
Paniltarui to Amarnath	4	
or or		
Pahlgam to Aru	7	approx
Aru to Lidarwat	7	
Lidarwat to Kolahot glacter	8	
Lidarwat to Sind Valley	24	stages

On the right bunl is all road from Bijbehara a good one.

Bijbehara to Sallar, 114 miles —A very easy road following up the valloy passing many pretty villages Supplies plentaful One mileshort of Sallar is the village of Kotsu with a sacred spring by which is a good easing ground It is 4 mile to east of the road

Sallar to Pahigam, 12 miles —The valley rapidly narrows and the scenery becomes wider Cross to left bank at 7 miles join main road thence 4 miles to P O and comping ground

There is a direct road to the Lidar Valley from Smagar via Latti tpur a village on the river at the foot of Wasterwan. It is rideable throughout and in parts pretty

Lattipur to Punzu 11 miles —Cross the Pustumi Bul a rise of about 1 400 feet a fur bridle road

Punsi to Wularhama, 11 miles —Cross the Bhugmur Pass a rice of about 2 500 feet rather steep

On leaving the river at Avantipur march 8 miles to Trahal where there is a fine open camping ground above the big village — Aext day 31 ours up the Bhurmar Pass 2 hours down to Wularhama

A mile beyond Wularhama join the above road from Sallar

The man road is on the left bank from Kanbal and Felamasabad. One can drive up to Eishmal am ( levely place )

Islamabed to Eisthmakam, 16 miles —The road passes over level ground through very fertiel scenery now through an orehard imbedded village again out seroes actress through noe fields over a grassy plun and then again into the shade of five walnut or chemar trees. The lest few miles there is a gradual ascent and state levving the river the road winds up through pretty lanes to the village of Lishmakam. Here the mount uns on either bani approach. Up agailion the right at Hapat hag (K. Hapat a bear) are some old copper mines

The village commits of a steep street "bove which are the masure walks and pestures betures to full monatory. Zyn dd in was a daughled that greatest of Kashim runts. Nor ud din. His body it is and was not found after derth but his strift at the mouth of a small cave undested where to build the shrims. A fine prospects gained from the terrace of the shrine. The camping place in a grove of walnut trees below. Beware of the foul revalest commit down through the village.

Eishmakam to Pahlgam, 12 miles —A beautiful forest ride of 6 miles leads to Batkot a pleasantly situated village and camp Beyond this the scenery gets wilder and the orags above grander

The road from Bubehara crosses the river at Langam by a new bridge built in 1904 after the flood by Colonel Ward — Ascending over a spur on the left east bank one sees Ganeshbal a place of pilgrimage with a red painted boulder, helow on the opposite bank. The rulley opens out, Townring aboves is centrally are the twins now peaks of Kolahof. Colonal Ward's house is over the next sup, and beyood it, on a forcet painten, are the best earning-grounds. Good water comes down a side nullah. There is a post office in the summers for smosth; also a shop with stores. A church was built in 1905, and there is assully a chaplain for July and Aurent.

The usual camping-ground is a mile short of the village, and about 27 miles from Khanabal. Supplies are fairly abundant.

There is another camping-ground round the corner to the east, above the village; on the opposite side, a mile or two up.

Paligam has many astractions of its own; pretty valle and rider and good fielding. Some of the marg above, as fashirennan at Kneimern and Kneimern and Kneimern and Kneimern and Kneimern are worth a visit. It is an excellent base, perhaps the best in Kneimer, for expeditions, to the videor econory of the lighter monateans. Some stages of the stages of the stages of the stages of the stages and the Kneimer and the Kneimer and the Kneimer and the stages of the stages and with proper arrangements for transpart and supplies, the weather being averagely good, such trips are quite within the strength of lags. The slittende of Paligam is about 7,200 feet, and it is somewhat warm coessistantly in summer, and perhaps not bracing.

But it has less rain than Gulmarg; and as transport is fairly easy to obtain, people can make excursions to higher and cooler camps in hot weather.

Perhaps a word of warning is desirable as to taking baggage, often too heavy, or awkward in shape, on poules, in wet slippery weather over the passes.

The pass to the Sind Valley is specially slippery on the west side. There is an old rained templo worth a visit, at Mamer on the right

back.

At Pahlgam the valley bifurcates; one path then passes up the north branch to Aru (see below).

There is a three-and-a-half hours' climb up the spur, north of the village to the top.

This commands a splendid view of Mount Kolahoi.

Paligam to Tanin, 9 miles.—The pilgrim roots goes up the east branch. It keeps on the right bank. Prediang is a small village, the last met with and is four miles up. The scenery gets oven wildow. At one place there is a fine cascade. The stage is at Tanin or Chandharware, at an altitude of 9,500 feet. The road is rough, but practicable for laden posites. The encampment is on a broad, grassy meadow, surrounded by fine trees and overham by hugo crass.

Tanin to Zelpal, 5 miles.—A stiff climb of 1,500 feet leaving the river, brings one to the upper limits of the pines and birohes. This ascent is called "Pisu" (flee), or probably originally "Pisar" (slippery).

A fine view of the snow peaks is got.

The river is in a chasm, 1,000 feet below.

The path 'winds round grassy alopes. At Zojpal are marge on both eides of the river, which can usually be crossed on snow bridges. On the south side are Gujar huts and birth copes. Alittands about 11,300 feet. Zojpal with its level ground and fred is a botter camp than Shisha Nag. A path goes to the Wardwan, south up the side valley ascending 500 or 800 feet to the pretty lake, Sona. Sar, overhung by glaciers—thence see page 94.

Shisha Nagis about 4 miles up the main valley, east. There is a steep rooky ascent of seven hundred feet, then easier round gressy spurs. It is a large sheot of water, of an emerald green colour on bright days, and is covered till June with icc. Altitude about 12,000 feet. Junipors in the only fuel. Curiously controted peaks rise to the south, and beyond them the splendid Kohinur mountains.

Shisha Nag to Panjitaral, 11 mila.—A stony ascent to a pass about 14,000 feet across the water-shed, to the head waters of the Sind river. Then a gradual descent, with the Amarasal mountain rising in burren grandeur sheed. The limestone strats to the east are vertically ribbed producing a curious effect.

The river has to be forded four times. In July it is deep and swift.

People sometimes camp at Khei Nar, but that makes the journey to
and from Amarnath rather long.

Juniper must be collected for fuel: the supply is rather scanty.

Panjitarul to Amarath, 5 miles.—Cross several tourents; wind round aboulder to Googam; ascend steeply over a precinjtous spur; then drop to the anow-heedded Amarwati stream, and ascend gradually to the cave, a lotty but shallow recess in the gypour nock, with some frozen springs which represent the groat Himalayan god Shiva. Many postical accounts have been written of the final seems of the pilgrimage; but it, with some things of the sublime, has much of the repulsive. Amarath ace is 13,000 feet shove the sea. The mouth of the cave is 120 feet high, and same width and depth. One path to it from Panjitarni crosses a lotty ridge, called Bairagi Ghat 14,000 feet (7) opposite the cave. A path has been made from Amarath to the Sind Velley—not fit for ponies. In 1907 the Superintending Engineer, with his wife took ponies up from Baltai and across to Pahlgam, but it was dangarous for all. It is sometimes passable aslate as August on foot but not always very sefe. The distance is 10 miles.

Another route to Amarmath from the top of the Zeji Pass. I discovered tin 1904. Leaving the dak but nas mile-peat 'I), and turning south up the Gumber ravine, † hour to shepherd's camp. † hour on avalanche snow. One our pass gottherd's camp, and along mornine keeping to left. Where glacier makes a bend keep south-east up rocks cutting off corner.

<sup>\*</sup>Vide Vigne, also Knowles in Sunday at Home, 1886.

One hour up roaks, I hour up easy more slope keeping well to the laft, E. 60. Total time to top 34 hours, then turn 8 by W. 30, arrows more, by curvasses, I hour to pass, turn W. clong ridge, 20 minutes, then easy closent, 8, 40 minutes to ravine. Here join roate to rum Bairgi Ghai, 5 minutes above one well marked tends; 170-second from care to pass, 1 hour 20 minutes; total tournes, beak four hours.

This route is practicable from and of June to end of September. Major Lucas also made a pass from the Kibal Nullah to Amarnath, with his Goorkhas, in 1907.

Returning from Panjitarni the pilgrims usually take a path to the right, and descend to Tanin via Astanmarg.

Panjikaral to Asianarag.—I miles. Betracing the provious road to 2 miles above Khel Nur, the path turns to the right, west up a greay valley with one or two ponds, to a pass 14,000 feet high. Sach Xach survey pack overclooks in on the south. This was climbed by Blaiop Leftry of Ckloutta in 1908. It offers a very impressive view. The decemb from the pass to Astannarg is story and steep, about 2 miles. The best camp us in the pretty blick glades of the side valley on the north, where are some Grigar bate.

Astanmarg to Pahigam via Tanin, 15 miles. The path descends steeply through forest, and at Tanin rejoins the other route. Many of the pilgrims returnfrom Amarnath to Pahigam in one day, and to Islamabad the next. Good for the sadhu.

An interesting cross route, only suitable for late summer, is from Astanmarg via Rabmarg and Har Nag to Aru. This is 2 days' journey.

Astanmary to Har Hag, 5 hours—A steep secont of 2,000 feet to have heard the saltitle lake overhung by the great cliff of Rajdain. Thence half hour's eary ascent, on mow, to the peas. From the pass the author's party, with Bishop Leftoy and Bishop Westoott, ascended the survey peak; an interesting climb, requiring alpine equipment.

To Har Nag is a descent of 2,000 feet. Only fuel juniper.

Harbhagwan Valley is a fine centre for olimbing the glaciers and peaks of the Kolehoi group. There is a path down the valley to Baltal used by shepherds as long as snow bridge remain, but afterwards blooked by unfordable rivers.

Dr. E. F. Neve and Lieutenant Mason, n. n., climbed the south peak of Mount Kolahoi in 1911, and the highest point of the north peak in 1912. They slept in a shelter tent at 16,000 feet and next day were roped for 18 hours.

Har Mag to Aru, 8 hours.—A greamy accent to the Pass, 600 feet above the Nag. Then steep rocky descent, 1,000 feet to valley. One mile down is Nafaran, where are Gujar hute and birch trees. A steeper descent. I hour, to Arwin a Gujar hambet at edge of plans; round this are pretty glades for camping. If ascending from Aru stop liers or at Nafaran. Valley bends west, narrows, gradual descent to Aru, passing two other Guiar huta.

Another path goes direct from above Arwin to Pahlgam crossing a ridge about 600 feet high, thence descending to Pahlgam about 3 miles, Rabmarg is near the top of the hill, with ponds and birch glades; a good sportsman's camp.

From Pahlgam the route up the western branch of the Lidar is very beautiful.

Pahlgam to Aru. 7 miles.—Path through woods, gradually ascending to about 9,000 feet. The meadows at Arn and the view of the whole valley below are charming. Camp beyond and above village on a wooded spur; are close to bridge on right. Three-anna-stage.

Aru to Lidarwat, 7 miles .- Near Lidarwat the valley opensout more and is in places densely wooded. The river has to be crossed. Previous enquiry should be made about the bridges. Height 10,000 feet.

Camp on west side of valley close to where stream from Tar Sar joins

on. Three-anna-stage.

Lidarwat to Kolahol, 8 miles .- All the way on right bank. At first through pine forest, then birches, occasional glades. The cliffs above are striking; in places ice-polished to a height of several hundred feet. At about 4 miles path emerges from forest, and grassy valley turns east. The last huts Gujar Kot on opposite bank; many small streams to be crossed and forded if bridges missing as often in early summer. At a bend is pretty waterfall. At head of valley is great Kolahoiglacier. Its over-hanging snoutforms ice-cave from which issues the river. Camp half mile below this. There is abundant fuel. Height 11,200 feet.

The glacier should be visited. Not far up is a difficult terrace, one can climb up at the side. Further up it opens out, and the great sea of ice can be seen enveloping the base of the grand rocky peaks of Kolahoi and its neighbours. A climbing party with lightly laden porters might cross to Sonamary by a saddle to the north-west of Harbhagwan peak. There is a glacier to descend.

There is a better route descending on the north side to Sarbal village, 5 miles from Sonamarg.

Camp high up at 14,000 feet. Next day start early, making for the depression in range due north of letter O Kolahoi in survey map; past 2 ponds; on the north side follow the ridge leading north-east which curves round to north-west to Thajwas, but keep down the steep snow slopes into the head of Thaiwas Valley.

## LIDARWAT TO PAMPOOR.

Lidarwat to Tar Sar. 10 miles.—The ascent is gradual up a pretty valley. No wood within two miles of the beautiful lake of Tar Sar; so it would be better to march on, crossing the ridge beyond (13,300 feet) and descend to Nagberan Valley, a fair descent of 4 or 5 miles; a long march for baggage.

This is a beautiful glon with park-like alopes, formerly famed for itsstar.

Magberan to Soutour, 12 miles.—Ascend to a lotty ridge, whence the view attractives serves the whole valley of Kashmir. Then descend steeply for 1,500 feet, and more gradually for 3,000 feet (about) to the pretty village of Soutour. The descent's mostly on grassy slopes and through a fine forest. Soutour a near the head of the Trahal Valley.

From here an old temple rain called Karastan may be visited.

Socior to Fampoor, 12 miles.—A steep ascent of 1,600 feet signagging up grassy alopes on one side, and down on the other for 2,800 feet; then across a plain to the village of Khru; where there are numerous secred aprings, at which great melas are hold in July. Themee 5 miles to Pampoor; or more directly to Stringage tis Ween about 11 miles.

Soutour to Avantipur, 15 miles.—Any easy march, all downhill through pretty scenery. Trabal is passed half-way.

At Avantipur arrange to meet boats; or else march by land, LIDAR VALLEY TO SIND VALLEY.

(Map 28.)

This is another interesting but difficult excursion, unless the weather and passes are specially favourable.

There are two routes from Liderwat, either of which may be done in two manches; in this case the camp midway would be in woodless and desolate regions, in fact, as close to the water-sled as possible. If taking the journey in three short stages the outny would be as follows—For either route the path like up the setep ravine toward Er Sar, and the oneampment would be where this valley biturates at the highest level of the birches, Schwas, distance of miles, height \$1,000 feet.

If going vis Jajimarg to Scophurs (in the Sind Yalley below Gund), the path takes the valley to the north-west, gradually ascending to the water-shed over grass slopes or iones boulders; then plungss very steeply down a long slope to the forest, where samp. The third march is also a steep desemb through the forces, the route is seldom used.

shewas to Khem Sar, o hours.—The path turns up a valley to the right and crosses a narrow and stony ridge (about 14,000 feet); then descends steeply to Yem Sar, a small turn. Marmotes abound here.

Half mile further is Khem Sar (tarn), below which camp. Wood must be fetched from further down the hill.

Khem Sar to Zalwan, 2½ hours.—At first round grassy hill-side, then a steep descent. In wet weather most dangerous for laden ponies. Campin forest glade; Gujar huts ner.

Zaiwan to Koolan, 2½ hours.—A steep alippery descent through forest. If going from Koolan first day, long ascent 7 hours to Khem Sar; second day to Lidarwat, also about 7 hours.

Lidarwat to Koolan, or vice versa.—Pay 3 stages, have extra men, and very light loads. In Angust and September baggage ponies can go. Give researd to all for 3 days.

If the pony men belong to Koolan or Gund in the Sind Valley, or to Pahlgam, they will know the condition of the path.

Ladies in jampans must be prepared to walk in difficults places. In wet weather it is very slippery. Only hill ponies should be taken by these routes, and ordinary travellers should not attempt them before July. In Soptember mow may fall on the passes. In 1908 the Residency party prossed, and the naths were somewhat improved.

## LIDAR VALLEY TO WARDWAN, OR VICE VERSA.

- (1) Pahlgam to Zojpal siz Tanin, as above, 15 miles.—Above Tanin ascend etcop hill 1,000 feet, then keep round till contour line meets the river, cross by snow bridge just below Zojpal and bear to right, camp near Gujar huts on small marg. Wood abundant.
- (2) Zojpal to Suknes, about 20 miles. Steep ascent up left bank of clearm to south; ascent 500 or 600 feet, then nearly level to Sona Sar (lake). Fath up right side, then steep ascent, rocky in places. Then over snow turning to left. Snow alopes to top of pass 15,000 feet, 34 hours from camp. Then very steep tiggag descent for 800 feet; snow will very much. Then rocky and grass. First suitable camping-ground 14 hours from top, where two streams join. Here Gujar huts and wood. Then 5 miles down left bank to Sakes. Fair path but steep in places. Cooles take about 9 hours from Zojpal to the first huts, Silmes and Wardwan, vide pages 149-50.

A botter route from Suknes to Zojpal practicable for ponies in good

weather is viz Rangmarg and Wawajan.

Suknes to Rangmarg Camp, about 1 mile.—Beyond the village supplies soanty and soolies must be fotched from lower down the Wardwan, after leaving Suknes keep on the right bank, close to the stream about 6 miles to whore road branches off to Bhotkkoln Nullal; then secend a very steep spur to a plateau, from here a fine view is obtained of Bhotkhol Nullah and the peaks beyond Nulua. There are two possible camping places on the plateau. The path about 14,000 feet enters the Kudarru Valley. The descent is through some black trees very steep and aligney in wet weather to Rangmarg in the Kudarun Valley, camp by the side of a stream coming down from the left.

Rangmars to Shisha Nag.—The path now ascends steeply sharp to the letwing the Kndaran Valley to the pass over Wawnjan. At first path keeps to the right-hand side than 1,000—2,000 feet up across a shale alope to the left-hand side and continues to top of pass. The shale alope is steep for pontes but passable with ears. At the top of the pass is a large snow field. The descent is not difficult to Shisha Nag. on turning the corner suddenly the peaks above the lake break into view, here join roote up Liddar from Tain to Panjitzan.

## CHAPTER VIII.

#### SIND VALLEY TOUR.

THE Sind Valley is the largest stibutary of the Valley of Kashmir. It is upwards of sixty miles long, and present most divenified scenery, ranging from narrow upland valley and deep rock-girt garge to open grassy meadow land and village dotted slopes.

The Sind Valley is the chief trade route between Kashmir and Central Asia.

At the head of the valley is the Pass into Ladakh—the Zoji La.

Summary of Marches.	From Srinagar.		Authorized rates. Peny. Coolie.			
Sringgar to Gauderbal		131	Miles		14	7
Ganderbal to Kangan		111		241	11	6
Kangan to Gund		13	,,	371	14	7
Gund to Sonamarg		144		484 B.	1	10
Sonamarg to Baltal		9		571	9	5
Sonamarg to Baltal Baltal to Matayan		14		73 B.	1	12
Matayan to Drass		13		86	12	8

Ganderhal is a small village at the mouth of the valley and the starting roint on the march up. It may be reached from the Musshi Bagh in a few hour a' march, distance 14½ miles or by water '96 Mar Nullah and Anchar Lake or by water from Shadipur on the Jhelum, a few hours' row, or from the Nasim Bagh on the Dal Lake, by road I miles.

Time for travelling is the Sind.—Sportmen car much through to Ledakh in late winter and early spring. There is then real risk from avalanches from Gangangair onwards. In bad weather travellers should halt, and pass dangerous slopes early in the morning and cross the Zoji before daylight. For ordinary travellers the end of May is a good time. Snow still hes in the shade at Sonamarg, and occasionally the steep snow slopes, almost pathless, are dengerous for pomes even below Sonamarg

June is a fine month; and is a better time for many excursions than later, as there are still sold snow bridges, by which one can penetrate otherwise pritiles mixines, as, for example, to Amarnath cave from Baltal, or to Har Nag Pony transport is not reliable for crossing snow, if very soft, so coolics should be taken

In July and August the streams are all swollen, and the snow bridges nearly all gone, so some of the higher valleys become almost inaccessible. In September the weather is often fine and dry, and the rivers become ioniable; October is also a good month

Some general suggestions may be acceptable, as to Sind

camps and trips

If time is no object, the end of May and half of June may be spent slowly moving up to Sanamary. Then a fortught at Sonamary, and several days at Baltal. After mid-July camping on the top of the Zopi at Kampathar, or Gombar would be interesting. Or the two marches extent to Dras would be a change into a duer chunate, and very different scenery and people.

The route across to the Ladar from Koolan should not be tried before July, at any rate not with pomes, nor in wer weather at any tame. There is a great advantage in keeping the necessary pony transport with one, paying the half rates

for rest day.

One or two sensible coolies should be kept to go down to villeges to fetch up provisions, ele, and care should be taken that the payment reaches the right person. It is well for those camping some time to promise a rupee as bakchish to the lambardar of the near villege for his help.

For a month's tour for a mobile party the following might

be suggested -

(1) to Sonamarg, 4 days; camp for 3 days there,

(2) to Baltal, and vest the Zop Pass, Amarnath or Har Nag (if in June), 2nd week;

- (3) to Sonamarg, doing some more single day trips, 3rd week;
- (4) to Wanget, 3 days; to Gangabel lake and Chittagul, camping a day or two at Tronkol and the lake, 4th week.

As a variant to this, for good walkers, needing few coolies, 2nd week, if late in June, sie Amarnath to Shisha Nag, and the Lidar Valley, or in Angust or Soptember 3rd week back from Baltal sie Sonsuarg. Nichnai, Gada Sar, and Haramukh feer routes 32.4, etc.).

#### COOLIES.

N. B.—For all the higher snow trips, it is necessary to have permanent coolies. Those for the Sind are best engaged from the hig villages below Kangan, or at Ganderbal. Full rations should also be taken for them, and given out day by day.

If taken through to Pahlgam and there dismissed, it would be fair to give two days' full pay for their return journey, Before attempting any of the more difficult routes, as, e.g., from Somanary to Amamath and thence to Shielan Nag, or across to Tilel, or to Kolakoi by the glacier valley, full enquiries should be made. In Switzeland 2 guides would be ordered for such noutes. And as in this country the Sahib has to lead (unless he has a good shikari), he needs some mountain experience unless he would get brimelf and naty-into a fix.

From Ganderbal to Baltal, at the foot of the Zoji La, is four-and-a half marches as follows:--

Gamberbal to Kangan, 11½ miles.—Three miles from Gamberbal, nessigner, is a place existable for escanging if the start was made by road form Srinagar or at village Nunnes, a little further. The road them descends and crosses the Sind river near Wayll. The next mile or two is bare, abony and hot, up the right bank, but, as it gats round the envre turning east, the steemer jumproves and there is more shade. Near Prem paths branch of to Chittagui and to Wangat (see below, Gangabal tour). Creating the Wangat vissens are soon once to the Paras. Engan in a purity rillage with a walnut tree grove. As fine large brangalow has been built experiment to the start of the start of the property of the walnut tree grove. As fine large brangalow has been built as been built of the start of

Travellers to Ladakh will take ponies through to Dras and there change them. Early in the summer ponies cannot cross the Pass, special arrangements must then be made for coolies at Gund (vizz Rules for Visitors.)

There is an easy short-cut for active pedestrains from the Shalimar Bagh to Haiyan, taking six hours (see below).

Kangan to Gund, 13 miles.—A pretty path through wooded lanes as the process of the process of the search ground near a shop, seven miles from Kangan. One mile on at Ganjyan cross to left bank, and through charming park-like country views exquisite. There are good camping places a short distance beyond his bridge. Two miles further on re-cross to right bank, on which continue to Gund, 4 miles. A bridle-path keeps entirely on right bank, assends gradually winding round the foot of the spurs which show marks of extensive glaciation.

The latter part is a gradual ascent. Gund is a pleasantly situated village, some little height above the river. Height 6,500 feet. Small rest-house, supplies scanty.

Gund to Sommang, 14½ miles.—Just beyond Gund the road leads along rock cuttings on the face of the cliff, and passes at 2½ miles the protity village of Ravil, and Koolan, 2 miles beyond. It is from these villages that supplies have to be fetoloid for people at Sommang. Here-the-road-rosses to-the-left-bank-for-tj-miles; then re-crossing pursues its way through pasture land interspersed with welmus trees to Gagangair. Here is a beautiful place for encomping 7,200 feet, at the 7th mile. Supplies scartly.

Above Gagangair the valley closes in, and is overhung by stupendous precipiese and crags which rise 9,000 feet almost sheer from the river. High upon the left is a lofty waterfall. In early summer the road lies across avalanche alopes. It secends steeply. Above the garge the mountains leave a wide open valley. A raised part on the left bank is enciroled by the river. It contains levely meadows, and is fringed on all sides by forest. This is Sonamurg, than which a lovelier spot would be difficult to find. The finest part of the garge is mile 45 to 47.

The lower village by the first bridge is Shitkari. Height 8,600 feet. Here a footpath turns to the right and ascends through the forest to best camping-grounds on the marg. Ponies should go round.

The main path keeps on above village round the slopes above riverthen on partially entityated meadows to Sonamary village, 24 miles, and recrosses there to right bank. There is a seral, with 2 small rooms for, European travellers on the left bank, also a post and telegraph office.

The climate of Sonamary is very bracing; but the rainfall is frequent though not heavy, except for two or three days at a time in July and August with fine spells in between. The rainfall is heavier from May to Soptember than in Gulmary.

Sonamarg was once the chief sanitarium in Kashmir. The villagers will point out the ruins of a church, which was accidentally burnt down. The best encamping-grounds are at the mouth of glacier valley on the marg. The only supplies are milk, fowls and eggs. There are splendid walks and scrambles all round. It is advanble to see that the water supply is kept safe and some sanitary arrangements should be made by each camp for servants' coolies. Snow trout can be enught in the main river.

The chief walk is up the Valley of Glaciers. These who scramble up to glaciers should bewere of falling rocks. Some knowledge of mountaineering is necessary for any of the bigger climbs. The green hill Shakdar to the north-west of Thajwas bridge is easy, and one can ride part of the ascent. Travellers taking their own horses should beware of poisonous grass here and at Baltal. Zibwar ridge is another beautiful walk.

Sonamare to Baltal, 9 miles .- A lovely path through rolling meadows interspersed with forest. The best intermediate camping-grounds are at Sirbal, 5 miles and Ranga Masjid, 7 miles. Baltal is merely a stage. fixed here for the sake of maintaining communications with Ladakh during the winter. There is a new rest-house, across the Zoji stream, in a levely situation among birch glades, with good camping-grounds.

Up the valley to the east is the path to Amarnath cave (see page 90).

Before the end of July there is also a practicable path to Har Nac leading up the valley to the south and a climber's route from Sonamarg to Kolahoi riz Sirbal nullah.

The route beyond this is given in the chapter on Ladaki, page 128.

Sonamarg is 1854 miles from Leh and 50 from Sringers.

From Sonamarg there is a mountain path to Tilel (see route 23).

There is a direct mountain path from the Shalimar Bagh to Haivan.

The traveller would encamp near the Dhal Lake, start early, cross the ridge at a height of 9,000 feet, then drop down through the forest to near Haiyan, 6 or 7 hours' march. From Haiyan he should go to Koolan, 12 miles, and the following day from Koolan to Sonamary, 10 miles.

## GANGABAL LAKE.

On the slopes of Haramukh, at a height of 12,000 feet above the sea are several lakelets, the largest of which, Gangabal, is considered sacred and is held to be the source of the Ganges! Part of the funeral rites of Keshmir Hindus consists in visiting this lake. The pilgrimage is during August. The route is as follows:-

(1) Ganderbal to Wangat, 18 miles.—As far as Pron the path is the main route up the Sind Valley. It then turns up the north, across some rice-fields, and passes along the right bank of the Wangat stream.

The path is not very level.

Wangat is a pretty village about 6,800 feet high. Three miles beyond the village are some very interesting ruins of two old temples, with eloisters, etc. They are called Bujdainbal and Nagbal (see Chapter IX, page 112).

- (2) Wangat to Gangabal, 12 miles.—Above the ruins a path for 4,000 feet; goes steeply up the hill, and ascende at once to over 10,800 feet. If wet this is too slippory even for a hill pony, and for danies it is very steep and long. The views are magnificent. Turning round the aboulders there are gentler slopes with birth forests and Gighr hust. This is called Tronkol, and here one may well concump, and do the return journey to the lakes next day. Above Tronkol there is gradual ascent over grassy shoulders with occasional boulders to the lakes. A distance of 4 or 5 miles. The Haramukh glacers come down to the shores of the lake. This securism would be specially interesting at the time of the Eindu pilgrimage. If eamping at the lake carry wood for cooking, another path, nearce but steeper, is from Chitzgul. In the old survey map Wangat was wrongly marked in the Chitzgul Nullsh, which is west of ite—
- (1) Chittagul to Mahalesh, 6 hours.—This is a steep climb, zigzagging up the spur to its summit about 5,500 feet up. This is not rideable. Here there is a grand view. The camp is an exposed windy place. There is water and wood in a ravine within ten minutes' walk.
- (2) Mahalesh to Gangabal, 3 houra.—Along the grassy ridge over one pass above 13,000 feet; then to left and down to the stream coming from lake; then follow it up. It is best to go up by Wangat and Tronkol and return by Mahalesh; 4 days are enough for the trip.

An interesting excursion is to continue on via Gangabal to the Wular Loke.

At the head of Gangabel a path asconds past another small turn Looigool Nag; then descends to Kalasar a small lake alt in by frowning precipices. Then comes an easy assent to a pass, probably 14,000 feet high, and atsep descent to the picturesque ravins at the head of the Erin Nullah. The head of this nullah is called Chitral. Here camp. This is a 6 or 7 hours' march. Next day descend to Koodoora 9 miles, or Tsuntmulla 12 miles, thence to Wular Lake at Nadihal 8 miles, Chitral to the Wular about 10 hours' march.

Trip to Haramukh via Evin Nullah.—Mount Haramukh is one of the most striking features in Kashmir scenery, and a nearor inspection of its glaciers and lakes will reward the enterprising.

Reputed inaccessible, the special abode of the gods, it has of recent years been conquered step by step. The various peaks, first the north or station peak, then the west, then the central dome, were useemded by separate expeditions, and finally in 1900 Dr. E. F. Keve and Sir G. W. Millist collimbed the east and highest peak. The marches would be from Maddhal on the Wulter Lake to Koodoora, 5 hours; on the way pass Sumlar, at 2½ hours. There or many good eamping, grounds.

Koodoora to Sarbal, 6 hours.—To bridge at junction of two valleys hours, then leave Chitral Nullah on left. Keep to right, gradual ascent 3 hours to Ganaspatra, then leave forest grassy, 2 hours to little lake, 1½ hour to 2nd lake. The route for climbing is up the ridge to north. From Sarbal to the summit and back is a stiff climb of 12 hours (see also p. 102).

General Bruce climbed Haramukh from Gangabal in 1907, a fine bit of icework.

Sarbal is a most beautiful valley. Returning to the Wular 4 hours to Koodoora, thence 4 hours to Nadihal.

#### GANGABAL TO BANDIPUR Via TRESANGAM AND ATAWAT.

1. Gaugakul to Trenagum—On leaving Gaugakul ascend from the had of the lake via Lodgood Naga are the vay to the Ern Nullah, then leaving Kalasar om the left go straight down the valley that is seen from the passhy Lodgood Nag. Thu; is the Trenagum Nullah. Then is no road only steep tracks, in someplaces, verysteep, and it is enterly unfafet laken points, for the first mule or two the descent is very steep. Then a terrent has to be 'orded which brings one or two more goat tracks leaving the stream on the right, hange masses of boulders then make it impossible to keep by the stream as the path accends up the hillside for about a mile and descends again to the stream, which again has to be forded, more gost tracks lead into a belt of firs, and a little lower down the valley another mullah' joins at Trenagum (ILO) feetly, camp here. There are two Grigar's buts and plenty of wood, distance probably from Lodgool Nag to Trenagum & Buila, but the road is bet do where way.

5. Tresagam to Ainvat.—Probably 12 miles, accomplished in 18 hours as the tree's was bed, cross the bridge from Tresagam and ascend steeply up the hill to probably 12,000 seek, keep high up fillulate for 4 or 5 miles. The vieware gledons, the way lead over a beautiful marg, called lägan (1), this would be an excellent place to sum in June or July; wood inpentiful. A mile or two beyond Magan through dessends sharely, down the mornain side on the left, and finally comes to a small village. The path helow this law previously downed were July in the mornain side on the left, and finally comes to a small village. The market has previously longer very lad in places, that helow this things in belies than previously longic very lad in places, than useles, further on junt by Avaklot another stream has to be foreid, the bridge having been suitely whated away. There is a feest bringalow at Ustob but no very good camping-ground, supplies can be obtained from the village.

Atawatto Bandigur, 9 miles.—This is an easy stage. The first 8
or 4 miles the read is rough, but improves as the valley widens out and a
fine view of the Wular is seen, finally Gilgitroad is joined 3 or 4 miles above
Bandigur.

From Sarbal to Mahalesh would be a practicable climb over snow ridge. But coolies would not follow.

#### GANDERBAL TO THE GANGABAL LAKES Via THE WANGAT NULLAH AND TRINKUL.

The Wangat Nullah crosses the main Sind Valley road about 10 miles from Ganderbal and 1 mile from Kangan. Turn sharp to the left just before reaching the bridge across the nullah and proceed up the nullah tothe yillage of Wangat, about 16 miles from Ganderbal (see also page 100).

Continue for another 3 miles along the same track until some Hindu ruins are reached. The camping-ground is alongside these ruins, and from this point the ascent commences.

The ascent is by a very steen and broken read for about 4 miles. It is possible to take lightly laden ponies up it but in places leads may have to be taken of and passed along by hand. At the top of the ascent the track is fairly level but there are one or two difficult spots to negotiate. The ascent is about 4 miles and it is another 4 miles from the top to the camping-ground known as Tronkul.

There is no water to be had for the first 6 miles of the road.

From Tronkul to the lowest of the Gangabal lakes is about 4 miles. The track starts along a grassy ridge, crosses a shallow valley to another grassy ridge at the upper end of which the track turns sharp to the right and leads along a genite slope to the lake.

## ERIN NULLAH TO GANDERBAL.

- Sarbal to Mohandmarg, I march.—Mohandmarg is on top of the range, south of Haramukh; it overlooks Ganderbal. Height about 10,500 feet. There is wood and water.
- (2) Mohandmarg to Ganderbal, march.—A steep. zigzag descent to Moingam, thence two hours to Ganderbal.

The ascent from Moingam to Mohandmarg would take 6 hours. It is a very camping-ground; from there one march to Koodoora in the Erin Nullah.

There is a route via Wangat to Tilel:-

- (1) As above, Ganderbal to Wangat, 15 miles.
- (2) Wangat to Tronkel, 6 miles.
- (3) Tronkol to Gadasar, 10 miles.—Cross a pass over 13,000 feet haven, and descent to grassy valley and birch trees. Here join a path goling by Nichnai to Sonamare, camp 10,000 feet.
- going by Nichnai to Sonamarg, camp 10,000 feet.

  94 (4) Gadasar to Lohinsa, 10 miles.—A steep climb to pass 13,500 feet
- then descend to narrow ravine. Height 9,500 feet.

  (5) Lohinsa to Girnal, 12 miles.—A steep ascent to 11,200 feet, then a lovely walk along grass ridge, with birch forest for several miles. Then

descend to Girinal village, or 4 miles further to Purana Itlel.

The author traversed this rents early in October with baggage pomics from Itlel, the wonder is they were not killed on the steep alippery alopea but Itlel omics are trained symmetric.

## See Routes 23, 24 for Tilel.

On the right bank of the Sind ziver there is a sath from Kangan to Marshal Lake. It is fairly good. The distance is 16 miles. Highway is Höngam, which is the best place for camping. The path is very presty, It keeps near a canal which passes round what would, without it, be barren tillede, and employets the gardenest Khansaku. It is as short march direct from Ganderial to Manashal. Most travellers go by bost win Shadipore and Sambal.

## MANASBAL LAKE.

Between the river and the foot of the mountain spurs, at the lower end of the Sind Valley, is a small lake, suclosed by a low hill, Abs-eng on one side and an elevated plateau on the other. This is Manashal. Though only a mile or two in diameter, it is very pretty, and, owing to its depth, always has a considerable excesse of dear water.

At the upper end are some well-shaded terraces watered by a canal brought from the Sind river. These, especially the highest, afford a very pleasant encampment. Close by is an old faqir's garden, renowned for its peaches and grapes. His cave is also worth visiting. He intended it for his grave, but after all was buried outside in the garden. Imbedded in the soil at the edge of the lake is a small temple of which the roof only is visible, it having probaly been submerged by some rising of the water-level. At the foot of the hill opposite is a small village, Kundbal, whence most of the lime in the valley is obtained. A great part of the hill consists of fossil limestone. On the northern bank facing this village is an extensive terraced garden faced with masonry, called the \*Darogha Bagh, another relic of the garden-making epoch of Jehangir. The outlet of the lake is a mile below this, a small canal, which joins the river at Sumbal. The large village of Batpur is near on the south-west, with many shady campinggrounds, springs and remains of old buildings and tanks,

The road from Srinagar to Bandipur passes through it, Morning and evening breezes from the Sind Valley keep the climate fairly cool. The lotus is nowhere more abundant or

<sup>\*</sup> Vide Appendix, Note on Moghul Gardens, page 235.

beautiful than on the margins of the lake. At Sumbal there is good fishing.

#### THE WULAR LAKE.

The Srinagar-Gilgit road crosses the river to Sumbal which is 2 miles from Blanashal. It leads north across the plain to the foot of the hills and skirts the spurs, passing the villages of Ajas and Sadrkut. It is a beautiful rids with a wide view of the lake. When the lake is high it extends to these villages, but in winter is miles away.

Bandipur is the starting point for Gilgit, and the chief commissiariat depot. There is a bazar of some size, also post and telegraph offices (see page 169).

Within 2 miles of Bandipur is Nadhial, the landing-place for the Brin Nullah. In late summer the neighbourhood of the Wular Lake is a pestilential mosquito-homsted swamp, and travellers should endeavour to cross the lake and get well away from its shores during the early part of the day. The best time to canno near the lake is in Abril and May.

Watlab, Zirimanz and Kyuans are the favourite camping-grounds. The last is sufest for boats.

A few miles beyond Bandipur, on the north shore, immediately opposite the river mouth, is Alsu, whence there is a route to the Lolab and to Nagmarg.

The village is a mile or so from the shore and on higher ground.

Kyunas lies south-west of Alsu in the bay formed by the rocky spur Shukr-ud-din.

Another path to the Lolab starts from Kyunas, and the bridle-path round the lake here ascends and crosses the low neck behind the Shukrud-din hill; by road it is about 7 miles to Sopor.

In the little hollow on the east of the rocky point is Zirimanz and on the west is Watlsb. In stormy weather there is no safe mooring for dungus at either place.

The lake is a large sheet of water with very ill-defined shores. Early in the summer it is often fifteen miles or more broad. But in the autumn little clear water is left, the weeds are so universal and thick. The deepest part is towards the Jow hill called Beha Shukr-ud-din on the north-west side, on disciple of Nur-ud-din's. Near this the roots come down to the water, and a little distance out in the lake is a curious abbiling spring. Near the mouth of the Bandipur Mullah is a small island with some ruins: one of these was probably a Bandari and was built by Zain-ul-abadin. The other is an old Hindu ruin, formerly of grand dimensions, and still showing some fragments of elegant pillers and arches. In the spring and lake autumn some fine sailings may be enjoyed on the Wular. There are frequently high winds in the afternoon; this makes the passage of ordinary Kashuri boots rather risky. Storms collect or the mountains, specially over Haranuth, and sweep down the valleys with great violence and little warning.

Kyunas to Rajpur.—An interesting little trip would be the forest path from Kyunas ascending 2,000 feet to the pretty little basin Rampur-Rajpur, where there is a forest hut; thence west down towards Sopor, or north over the lill to Nagmarg or amoss the ridge and down to the Lolab. The direct route is not fit for ponies; but one can ride along the top of the ridge to the west for 5 miles, then join the Arwan route, and descend to Doras forest hut; allogethere about 4½ hours, from the forest hut at Rampur-Rajpur there is an easy climb of about two hours to the top of Kahoota Station Hill, which commands a lovely view, cultie uninterrupted, on all disks.

# NAGMARG.

Nagmang is a favourier resort of Europeaus and Gujara situated on the flattened grassy summit of range overlooking the Wuler Lake above Aku. It is surrounded by pine forest and is in many arrespects similar to Gulmary. By prospect is, if anything, more beautiful. There is now a forest that the

if anything, more beautiful. There is now a forest int here.

If it reached by a fairly cary around of about 3,600 feet from Alias

which should be made in the early morrhog ast it is quite shouldes. From

the Lolab there is also a direct path fit for peake. The water-empty is

a small spring lable to be founded by cettles and contain worms, this

is a beam improved and in early summer there is abundants supply.

This is a charming place for a came (Koobell.)

Cattle tracks and shepherds' paths lead right along the crest of the

range to the Tragbal Pass, a day's march.

## THE LOLAS.

The Lolab (K. Lolau) is a pretty valley behind this range. The road to it from Alsu ascends for about three-and-a-half hours, leaving Nagmarg on the right, then descends an equal distance through fine forest scenery. The Lolab is three or four miles wide and four times that length with several smaller mullahs opening into it. Its peculiar beauty consists in the wide park-like expanse of meadow and fields dotted over with groves of walnut trees and orchards in which villages are almost buried from sight, while the valley is fringed with low cedar clad hillocks and shut in by dense forests. Rormenly bears abounded, but frequent drivers have decimated them. The valley should be visited before July or after August, as it is not elevated, and is hot in summer.

There are nice little forest luts at short stages, containing chairs and tables, and prettily situated. Permission to use them should be obtained in writing from the Divisional Forest Officer. The huts are at Doras, Chandigam, Kumbrial, Renawari and Kitardaji.

LOLLE TRIPS.—Start from Baramulle, Sopor or ALSU. Many other cross routes are possible. For simplicity I give the three chief:—

- A 1. From Baramulla to Pantsal forest hut, 9 miles.—An undulating good path, pretty scenery.
- Pantsal to Kitardall, about 7 miles.—Ascent 600 feet, follow lovely forest ridge; descend little but beautifully situated, view of Kaj-Nag mountain.
   Kitardall to Khalpor (Renawari hut), 12 miles.—Cross Mowar
- stream at 5 miles, then ascend, akirt hill, lovely deodar forest, descend to Dachildors, and down to Khaiyur, turn left up to hut, half mile; from herea party with tents could go to Shalurs; turn N.-S. to Tregam and thence B. to Kumbrial. The whole district of Utar Machipura is pretty.
- Khaiper to Patalnag hut, above Drogmulla, about 10 miles, crossing the Pohru valley and passing many villages.
- Patalnag te Kumbrial hut, following up the Pohru, along a narrow forest valley, about 8 miles.
- Kumbrial to Doras hut, 10 miles.—Eairly level valley, more open.
   If camping, Lalpur is the best place.
- 7. Doras to Alsu, about 14 miles.—Cross ridge 2,000 feet up, ascend through forest; a long, steep descent to Alsu; camp at village, 1 mile

from lake, or get into boats, previously armaged for. From the crest of the pass it is 14 hour N.E. to Nagmary forest hut, or about \$\frac{1}{2}\$ hours S.W. to Rajpur forest hut.—{N.B.—One cannot be sure of getting a dunga from Bandipur).

- N.B.—A made road now goes from Seper to Lalpur 39 miles, via Chegul, Dregmullah, Kotwara, as follows:—
- From Sopor to Harwau hut, 10 miles.—Along a flat dusty read.
   If camping go to Chogul, 13 miles, as Harwau is out of the way.
- Harwan to Patalang, about 14 miles.—Following left (true) bank of Pohru river, join above route A 5.
- N.B.—In early summer a dungs bost can usually be towed up the winding Pehru, with size petry wooded hanks a stars a Pohru-petr vermise from Harwan but. Here there is a rapid, if practicable, to ascend, then the bost might proceed to Clough, of even to Awaktoka above which, is is too rapid. There is seldom enough water for this after mid-June; or
- 2. Alternative to above, Hauwan to Doras hut,—Climb the ridge N-Za, about 5 hours' ascent, not steep, her in alternoon, descend 1 hours to Duras forces hut; distance about 9 miles. Theree, as above, to Nagmarg or Alas, see A 7 or, in the opposite direction to Kumiran, see A 6, and so back to Baramulla, 6 more marches, total 8 marches.
- 3.—From Also (on the Wular Lake) arrange transport 24 hours before from Bandipur or Sopor.
- Alsu to Naguarg, see page 105, about 6 miles, and steep ascent of 4,000 feet.
- Nagmarg to Dozas, about 9 miles—Descend three hours, then 1 hour on level; thence, as in A 6, reversing the direction; or B 2 (see above).

Another path from Nagmarg would be S.-W. 10 Rajpur-Rampurkut, chieffy descent, one ascent 200 Cest midway, about \$2 hours, and theme back to the Lake ab Kymas, \$1 hours more. There is also a direct path from Rajpur-Rampur to Spore, about 9 milles; also more over the hill N. to Doras, not rideable in many places. There are many other paths. All the above routes are fifter beggage points, except the last, and may mostly be ridden on hill posits. There is a part-office all-landware, which this tabell, and in not far from the rout of between Remavuri and Pathangs (see A 4). There is a direct rout from there to Soper, 10 miles. Ordering travellers cannot stage. A single part to be supported to the single path of the single paths of them. Some of them are infected with firm.

#### CHAPTER IX.

## THE TEMPLES OF KASHMIR.

There are few ruins in India comparable to the massive temples of Bealbee or Palmyra; but ancient India has nothing more worthy of its early civilization than the grand remains in Kashmin, which now feebly excite the wonder of European tourists and the pride of Kashmir Brahmans; the massive, the grotesque, the elegant in architecture may be admired in many parts of India, but nowhere is there to be seen the counterpart of the classically graceful, yet symmetrically massive, edifices of Kashmir which though inferior to Palmyra or Persepolis in stateliness, are in beauty of position so immensely superior toeither.

The numerous indesipherable ruins which abound throughout the valley, and the immense quantity of cut and fated stone, built, or rather patched into the walls of mosques, houses and into ghats and embankments, give evidence of how manyhave been lost of the series of temples erected by various rulers of Kashmir between the second and tenth centuries A. D.

Fortunately it is possible to identify most of those which remain, and they represent different periods in the development of the style.

Much that is very contradictory has been written about these temples, in spite of the evidence of history, conformation and style. "It is certain," to quote competent Indian archaeologist, who confirms the conclusion of General Cunningham, Bishop Cowie and other, "that all of the existing Kashmir temples were dedicated to the worship of Siva, and enshrine merely a conical stone, the popular symbol of that divinity. The interior of the colla, or sanctuary, is seldom more than ten or twelve feet square; space ample enough for the simple form of adoration which alone is required by Mahadeva (Siva) from his devotees, viz., that they sprinkle water on the sacred symbol,

pace round it with measured steps, and finally crown it with a garland of flowers. The drain for the purpose of carrying off the waste water still exists in most of the temples, and is clearly part of the original structure being a projecting corner from some one of the few enormous blocks, of which the building is composed." Strengthening this almost irrefragable internal evidence as to the purpose of the buildings, we may add that Hinduism in Kashmir, from time immemorial, has been the centre of Shiv worship, which absorbed to itself the primitive serpent or nag worship, of the aboriginal tribes. In many places this combination determined the site of the temples, which are placed in a tank supplied by springs or nags, the special abodes of the water snake gods whose form was in many cases coiled round the symbol of Siva. Elsewhere the temples would be surrounded for the same purposes by a tank fed by a canal, as at Martand and Bhaniyar.

The exact age of the temples, and the name of the founders may in many cases be safely identified from the Raja Taringmi; and that of others deduced with fair accuracy from modifications in the style or from tradition.

But the discovery of Brahmi script in the enclosure of the Badshah tomb makes one willing to accept the earliest date compatible with the ancient chronicles.

For a general idea of chief temples, we cannot do better than once werbutine, by kind permission of the author, portions of the paper on the Architecture of Kashim, by T. S. Growse, Edg., I.O.S., published in the Royal Asiatic Society's Transactions:—

<sup>&</sup>quot;Owing to the great thickness of the walls, and the massiveness of the plinth upon which the temples are raised, the exterior proportions are much more imposing than would be experted from the insignificant interior.

<sup>&</sup>quot;Though less suggestive of Greek influence than the detached pillars of the colonnades, the pilasters, with their definitely proportioned base, shaft and capital, the square architaves of the doorways and the triangular pediments that surmount them, but still more the obstened simplicity of out-

line and the just subordination of merely decorative details. are at a glance seem to be classic rather than oriental. Beyond the points above enumerated, the resemblance ceases; the porches are curved into a bold trefoiled arch of similar character with English Gothic of the first pointed period, and the roof, instead of being flat and out of sight, is a high pitched pyramid, broken however into two compartments by a horizontal band carved with dentils and tryglyphs. In short, the adaptation of classic forms was complete just so far as the differences of . climate and the conventionalities of religion allowed. In the sunny land of Greece a roof was felt to be a useless encumbrance and therefore kept out of sight; on the snowy hills of Kashmir a substantial covering overhead was above all things to be desired : hence the roof became a prominent feature in the design. In sculpture the influence of Greek art was unfelt since the archaic representations of the deity were too sacred to admit of modification, and were reproduced in all their primitive rudeness in niches and on panels moulded with the most artistic grace.

In all the Kashmir temples, except Martand and Avantipur the cells forms the entire building. In some examples there is an open doorway on each of the four sides; in others only one, facing east or west such a position enabling the rays either of the rising or setting sun to fall full upon the idol. In both cases the exterior effect is the same. When there is only a single entrance the porch above it may be made slightly more prominent, but on each of the other faces is a similar creetion, though the doorway within it is closed. At the larger of the two Pattan temples the projection of these pseudo-porches is so considerable that they form deep niches or rather shallow-chambers in each of which was once a lingam.

Although the purely architectural details of the building so markedly resemble classical styles, yet in its primary conception it is linked closely with the temples of Bengal: in both there is the square block surmounted by a pyramidal roof and in both the plan is extended by projecting porches on one or more sides; but in the more oriental form of Bengal the pediments

and gables are curved. By a repetition of the porch and the addition of flanking cellas the imposing dimensions of Martand, are attained (which may be said to have the counterpart of the chancel choir nave and transcripts of Christian churches).

The earliest of all the temples is soid to be that erowing the Takht-i-Saleman, called by Hndus Shankarachan. This hill rises to the height of 1.000 feet above the plain, and overlooks the town of Srangar, which spreads away to the foot of the opposite but somewhat lower eminence called the Hari Parbet. The first religious edifice on this commanding site was built by Jalaka, the son of the great Buddhist convert Acoka, about 200 B. C. In all probability there is no fragment of this now remaining. The temples was subsequently rebuilt and dodicated to Jyeshtevara, a title of Mahadova, by Raja Gopaditya, who reigned in the VI century, A. D. To this date may be ascribed the low enclosing wall and the plinth of the existing temple; but some of the superstructure is evidently more modern.

Of more interest and in much more perfect preservation is the small cave temple at Bhaumajo (see page 86). It stands at the far end of a natural but artificially enlarged fissure in the limestone cliff which rises from the bank of the Lider at the mouth of the valley bearing the same name, about half a mile from the village of Bhawan. The entrance to the cavern. which is more than sixty feet above the level of the river, is carved into an architectural doorway and a gloomy passage fifty feet in length leads from it to the door of the temple. It is a simple cella ten feet square, exterior dimensions, raised on a boldly moulded plinth and approached by a short flight of steps. The square doorway is flanked by two round-headed niches despoiled of their statues and is surmounted by a high triangular pediment reaching to the apex of the roof with a trefoiled tympanum. There is no record from tradition as to the time of erection; but from the absence of all ornamentations, and the simple character of the roof, which appears to be a rudimentary copy in stone of the ordinary aloping timber roof of the country, it may with great probability be inferred that this is the earliest perfect specimen of a Kashmir temple and dates from the V or VI century of the Christian era.

The little shrine at Payeoh (page 80) comes next in point of antiquity, and in intrinsic beauty and elegance of outline is far superior to all the existing remains of similar dimensions. The traveller Vigne regarded it as the most modern of all, but apparently from no more solid reason than its excellent preservation. This, however, may be explained by the retired situation at the foot of a high table-land which separates it by an interval of five or six miles from the bank of the Jhelum and by the marvellous solidity of its construction. The cella, which is only eight feet square, and has an open doorway on each of the four sides, is composed of only ten stones, the four corners being each a single stone the sculptured tympanums over the doorways of four others, while two more compose the pyramidal roof, the lower of these being an enormous mass 8 feet square by 4 feet in height. It has been ascribed by General Cunningham, on grounds which in the absence of any positive authority either way, may be taken as adequate, to King Narendraditya. The sculptures over the doorway are coarsely executed in comparison with the artistic finish of the purely architectural details, and are much defaced, but apparently represent Brahma, Vishnu. Shiva and the goddess Durga. The interior is still occurried by a large stone lingam and from the water-drain and bulls carved on the smaller pilasters of the doorway it is evident that this was the original intention.

Of somewhat later date are the temples at Wangat (page 99). These are in two groups situated at the distance of a few hundred yards from each other, and consisting-respectively. of six and eleven distinct buildings. In close proximity is a sacred spring called Nag-bal, and by it the footpath leads up the heights of Haramukh to the mountain lake of Ganga-bal. a colebrated place of pilgrimage. It is probable that the temples were erected at different times by returning pilgrims as votive offerings after successful accomplishments of the hazardous ascent. The luxuriant forest growth has overthrown and buried almost completely several of the smaller temples. On the summit of the largest a tall pine has taken root and rises straight from the centre in rivalry of the original finial. The architecture is of a slightly more advanced type than at Payech, the most striking feature being the hold projection and lofty trefoiled arches of the lateral:

Of very similar character, but in more perfect preservation, is the temple at Bhaniyar. This is much better known since it stands on the very edge of the high road leading from Murree to Srinagar, about a nile-and-a-half from the village of Naushehra. The actual shrine is a cella of larger dimensions than usual, being 13½ feet square in the interior, with walls 6½ feet thick, supported on a basement, 4 feet square, of singularly noble proportions. It is the earliest example that still retains its original enclosure, a closstered quadrangle measuring 145 by 120 feet. Though the final touches of the chisel have been effaced by time, the colounds is in other respects almost perfect. The wall is pierced by a series of pedimented and terfolied arches forming shallow recesses for the accommendation of priests and pilgrims.

A few miles further on the road is another temple of similar character, but originally, as it would seem, of more elaborate design. Here, however, the surrounding colonnade, if it ever existed, has entirely disappeared, and only the blank wall remains.

The celebrated temple of Martand is the next to claim attention, and is of far more imposing dimensions than any other existing example except Avantipur. It alone possesses in addition to the cella, or sanctuary, a choir and nave, or to give them their Sanskrit terms, antarala and orddhmandawa. nave is 18 feet square, and the total length of the building 63 feet. The sanctuary alone is left entirely bare, the two other compartments are lined with rich panelling and sculptured niches. The roof has been completely removed and lies in vast masses round the wall of the buildings; it is calculated that the height cannot have been less than 75 feet. The western entrance, approached by a wide flight of steps, now encumbered with ruins, is surmounted by a magnificent trefoiled arch and flanked by two side-chapels, one connected with the nave by the extension of their roof over the narrow intervening passage. On the other sides of the temple are similar lofty arches with closed doorways below. The pillared quandrangle, which is 220 by 142 feet in dimension, varies in no essential point from that at Bhaniyar, but the carving is rather more elaborate. are in all eighty four columns, a singularly appropriate number in a temple of the Sun ; if, as is supposed, the number eightyfour is accounted sacred by the Hindu in consequence of this

being the multiple of the number of days in the week with the number of signs in the zodiao. The colonuade is distinctly recorded in the Raja Taxangini as the work of the famous King Lalitaditya, who reigned from 699 to 725 A. D. From the same authority we gather, though the interpretation of the verses is considerably disputed, that the temple itself was built by Ramaditya, and the side-chapels, or at least one of them by his Queen, Amritaprabha. The date of Ramaditya's reign is involved in some obscurity, but the safest conclusion is that he died in the first half of the fifth century after Christ,

On the right bank of the Jhelum, about half-way between the towns of Srinagar and Islamabad, stood the capital of the famous King Avanti Varma, which he called after his own name Avantipur (page 80). Here he lounded two templesone before his accession to the throne, the other and larger one subsequently. Both were dedicated to Mahadeva-the former under the title of Avanti-swami, the latter under that of Avantiswara. His reign extended from the year 858 to 883 A. D. The two temples are now well excavated. The gateways of both are standing and the colonnade of the smaller temple which had been completely buried underground, has recently been exposed. The style corresponds with that of the Martand quadrangle; but the semi-attached pillars of the arched recesses are enriched with elaborate carving of very varied character. while the large detached culumns are somewhat less elegantly proportioned. All travellers to Islamabad should visit these temples as fresh recent excavations have revealed a wealth of carving unparalleled in Kashmir.

It is recorded in the Raja Tarangini that Sankara Varma, who succeeded Avanti Varmis, and reigned from 883 to 901 A. D. In conjunction with his Queen Sugandha, dedicated to Mahadeva, under the titles of Sankara Guress and Sugandhesvara, two temples at his new capital of Sankarapura. This town is identified with the modern Pattan, where, beside the highway leading from Srinngar to Baranmills, two stately temples are still standing. Each is a simple cells; but in the larger one, as already noted, the side porches are so deep se to constitute separate chambers. In both the architecture is of the same character as at Martand and of equal excellence. Here

and there the carving is as sharp and fresh as if executed yesterday, but there are many omnous cracks in the walls and if the forest trees, which have taken root in the exercises, are allowed to remain and spread, the total destruction of both buildings is imminent. The large one was much injured by the earthcuake of 1855.

Such a fate has already overtaken a most interesting temple situated on a diminutive island, called the Lanks, at the entrance of the Wular Lake. It was constructed on a plan entirely different from that of other existing examples, being a square (sife feet in the most of the collar. The exterior was ornamented with arcades of techoled alches in two tiers. There are so Gothic in character that they might be transferred without incongruity to the walls of an English cathedral. The island in a dense mass of jungle; and the forest trees, which have already displaced a great part of the massive masonry theaten soon to bring down all the remainder. There appears once to have been a surrounding colonnode, as a large number of flated pillars are lying about, but none is sits.

The temple of Pandrathan, the last in the main series is next to Martand, the best known of all, in consequence of its close proximity to the capital. The pond has been drained and plinth excavated. Access to the interior is, therefore, a matter of little difficulty which is fortunate since the domed roof is well worth inspection, being covered with sculpture of such purely classic design that an uninitiated person who saw a copy of it on paper would at once take it for sketch from a Greek or Roman original. The temple is 18 feet square, with a projecting portice on each side, and displays, in a confused exuberance of decoration, more especially the repetition of pediment and trefoil, clear indications of a later date. It was erected during the raign of King Partha, who governed Kashmir from 913 to 921 A. D., by his Prime Minister Meru, who dedicated it to Mahadeva under the title of Meruvarridhanaswami. The ground about it was then occupied by the original city of Srinagar; the modern name Pandrathan being a corruption of the Sanskrit Purandhisthaus, i. e., "the old capital," The seat of government had been transferred to the present

site by King Pravarasena II, nearly 500 years before the foundation of the temple, but the old city was not entirely deserted till its destruction by fire in the reign of Abhinanyu, about the year 960 A. D. The conflagration was so violent that, excepting the temple, which was protected by the water about it, no other building escaped. There are in the neighbourhood, of Pandrathan some few fragmentary remains, which General Cunningham, more than twenty years ago, amused himself by piecing together and reconstructing with a wildness of imagination which his present mature judgment would be far from endorsing. The remains are simple as follows: first two large lingams, one 6 feet high, erect and entire; the other broken into three pieces, the lower part polygonal, the upper round with conical top, which together made up a height of 16 feet. Near these, which are separated from each other by a short interval-is a huge mass of stone, being the feet and legs, as high as the knees, of a colossal seated figure, probably a Buddhist image. At some little distance beyond this an isolated crag has been cut, as it stood, into some sculptured form, apparently a chaumukhi, i. c., a square pillar with a figure on each face. But the rock has been overthrown, broken into three pieces. and so defaced by the action of fire that it is impossible to speak positively as to the original design. Of the three fragments. one, the bace, is still attached to, and forms part of the natural rock. These four perfectly distinct objects, viz., the two lingams the seated Buddha, and the rock-cut chaumukhi were combined by Captain Cunningham into a gigantic Phallic pillar, with the heads and feet of four figures showing at the base and centre of the column, while their bodies were made to disappear into the polygonal shaft of the large lingam,

On the margin of the beautiful lake of Manashal is another amall temple about 6 feet square, sunk like that at Pandrathen, to some depth in the water. Strange as it may appear, there is good reason to suppose that all the Kashmir temples, not even excepting Martand, were orginally surrounded by artificial ponds. This alone can explain the silting up of the Avantipur quadrangle. The water was probably conveyed from an

<sup>\*</sup> The pillar is limestone, brought from some miles east.

exterior reservoir into the courtyard, which was flooded to the depth of two or three feet, partially covering the plinth of the temple, while a stone footway was carried on masonry supports over the water round the margin of the colonnade, and from the temple door to the entrance gateway. The object of this curious arrangement was to propitiate the nags or water-spirits, the primitive divinities of the country. In proof of the prevalent ophiclatry may be adduced the ancient dals soulntured with figures of snakes, which are still occasionally to be seen worked up into the walls of modern buildings. There is one at the temple guat Bijbihara; perhaps the most curious of all is at the village of Changes on the Bhimber route into Kashmir where, among a number of small lingams under a pipal tree is a rudely carved slab representing a serpent with its long coils spreading over the whole length of the stone and a devotee with clasped hands standing below. Abdul Fazi speaks of nearly seven hundred figures of nages or serpent gods existing in his tius in Kashmir.

One peculiarity of temple architecture yet remains to be noticed, and that is the occurrence here and there throughout the country of miniature models of temples, constructed in each case out of a single stone. The visitor to Kachmir by the Fir Panjal road passes one, half-way between Shuqiyon and Ramı; Tanjal road passes one, half-way between Shuqiyon and Ramı; there is another at Kohli, near Payech; a third, built up into the enhunkment of a canal, called the Nali Mar; and two more in the city lake, often completely under water, and hence much wown and defined. Several more still exist in the city.

The temples were naturally objects of dialike to the newly converted Muhammadan rulers, and about 1400 A. D. Sikander set himself to destroy them, while also fordibly converting the Hindus or driving them from the country. Many of the relies of his iconoclasm may be noticed in the enhankmants which his the river, and in the plinths of masques of dwelling-houses, where comices, trices and poliments may be seen. The act of stone building seems to have been forgotten until temporarily revived by the Moghrul Emperour.

There are other ancient temples worth visiting at Narestan in Trahal, at Kothair, 3 miles from Atchibal (eart), and one close to Pahlgam.

# SOME NOTEWORTHY KASHMIR KINGS.

Date.	NAME.				
3rd Century B. C.	Asoka, the great Buddhist King, founder of Srinagar				
2nd "	Huska, Juska, Kaniska. These were Turkish Kings also Buddhist.				
6th ,, A. D.	Mihirakula, the white Hun King, extensive domi- nions in Central Asia, a patron of Brahmins.				
	Gopaditya, founded temples on Takht and Gupkar				
» »	Matrgupta, Kashmir, subject to Kings of Ujain.				
, ,	Prayarasena II, founder of new capital.				
7th ,	Durlabhavardhana, King at time of visit of Hinen Taiang, the Chinese traveller. He ruled most of the Punjab.				
699—735	<ul> <li>Lalitaditys, a King who conquered and built shrines, was viotorious over Turks and expeller Tibetans from Baltistan. Built Martand colon nade, made canals.</li> </ul>				
	<ul> <li>Jayapida, an adventurous and travelling King, founded Jayapura.</li> </ul>				
855-883	<ul> <li>Avantivarman, a time of construction and progres flood prevention, etc.</li> </ul>				
813902	S'amkaravarman attempted to re-conquer surround ing countries. Oppressive administration.				
928-937	Cakravarman was deposed for a time, struggles with feudal lords.				
950-1003	<ul> <li>Didda, Queen, married a Lohara peasant; theno a new dynasty sprang; much internedine strife.</li> </ul>				
1089—1101	Harss, an able and versatile King, but tyrannical Killed in a rising; the subsequent Kings were weak.				
1339	Shah Mir usurped the throne, founded Mohamma dan dynesty.				
	Sikandar But-Shikast destroyed many temples am shrines.				
1420—1470	<ul> <li>Zain-ul-sbadin, a patron of learning, a prosperou reign, Many Hindus re-settled.</li> </ul>				
1532	Mirza Haidar conquered Kashmir from the north.				
1586	Akbar conquered Kashmir.				
1600	Jehangir, the great garden-maker.				
1752	Pathan rulers, Kashmir a province subject to Kabul.				
1819	The Sikhs conquered Kashmir under Diwan Chand.				
1833	Colonel Mian Singh, Governor, prosperity restored				
1846	Gulab Singh acquired Kashmir by treaty with the British Government.				

According to Kalhana, that great King Asola, 3rd cantury B. C. formed the first city of Stringer and it was probably along the slopes from what is now called the Gap (Ait-gaj) to Pundrentban, where many scattered remains still exist in addition to the well-known temple. Pandrenthan is probably a contention of Purana dhisthana meaning the old copital. This mane is first mentioned by Kalhana in connection with the shrine Paranasvara built there by Pravarasena I, ut the beginning of our ora.

King Pravanasena II, grandson of the above, built a new city in the neighbourhood of the Hari Parbat (stretching towards the Sathu) or embankment, then as now shutting off the Dal Lake, and going to the Tathit (Bajatarangini III, 386, et seg). He also built the fint boat-bridge over the trev. He was spins Hindu, and erected various shrines, the obief one that called Pravareas may be now indicated by the extensive rnins between the present Jama Marjid and the south gate of Hari Parbat. For nany conturies the official name of the city was Pravarapura strict its founder.

It was at first on the right bank of the Jhehum, and on the banks of the river, the Mar Canal and Dal water-ways. It was about A. D. 1050 that the noyal palace was transferred to the left bank, and it was at first near where the 2nd bridge now is.

There are various indications that even before the time of Parasseans there had been shrines and temples where the city is now; the mention of the simes Bilimasvamin, and of the temple Vardhamanese (Rajatarangini II, 123), carries us back to about to B. C.

A few ancient sites and names can still be identified.

The stream from the Dal Darvana now called the Tunnikul was then called Malasarit. The modern name Kundabal for an adjoining part of the city repressus the ancient Kunilabal. Below the Hari Parkat was an old Durga shrine and the village of Saritaka. On the south side of that hill is a Ganesh shrine, then known as Bhimasvamin. This ided is said to have changed direction once or twice. There are neighbouring Mnhammadan shrines which have utilized the abundant materials of ancient temples. Stein suggests that the present Ziarat Pir Haji Muhammad, a little south-west from the Jama Masjid is the ancient Vishuu Ranssvamin of King Ramaditya. There is still an octogonal cells with high basement, and enclosed courtyard, with ornamented gateways.

On the river bank by the tomb called the Badshah Zeinul-abdin, now used as a granary, are some ancient gateways
and other remains. On these Dr. Albbo recently discovered
some fragmentary Brahmi inscriptions which probably date
back to 150 B. C. Evidence of the use of Brahmi or Asoka
script in Kashmir had hitherto been wanting, though its use
was suspected. These remains are therefore the most ancient
in Kashmir, unless indeed the basement of the Takih Temple
antedates them. The coins of Pravarasens are in Gupta charactor, and the Sharada characters first appear on the coins of
Avantivarman (645-684 A. D.).

Higher up the right bank, near the 2nd bridge, was the temple Tardamaness, built by Shaudhimat, 50 B. O., close to Manayar phat. There is an interesting note about this in Stein's Rajatarangini, Volume I, page 382. Across the confluence of the Tsunti-kul with the main river Vitasta, was an old burning ghat, and the great island Mayasum, now the European quarter. The present Drogjan village by the hospital, may be recognized in the name Durgsgalika, where the blind King Yudhaisthira was imprisoned after his abdication.

To the north between the Hari Parbat and the Dal is the ancient Rajanavatika, now called Renawari.

On the left bank of the river, probably below the 2nd bridge is the site of the amoent palace of King Ananka. It was probably built chiefly of wood. A later palace built by Zain-ulabdin is said to have been twelve stories high; bith as many as fifty rooms in one storey; it was entirely wooden.

Some other sites may be briefly mentioned.

Boohwara, adjoining Drogjan, is the ancient Bhuksiravatika. Gupkar was Gopagrahara, named after King Gopiditya.

The village of Thid, Bren and Ishbar are also mentioned in the chronicles. Above the last, on the crage overlooking the Dal, was the Suresvari Durge shrine. Half-way up, under a rock, is the sacred spring Satadhara. The mountain shrine

is now neglected, but the tanks and lings in Ishbar are the scene of popular melas.

Turning to the north-west of Srinagar, on the present Ganderbal road is the village of Vetsar Nag with the ruins of several temples and many other remains.

Annual meles are still held at the chief tank. Beyond this about two miles, is the village Amburher, where formerly was the temple of Siva Amareswara. Some slabs and fragments still exist there.

Just to the north of the Fort hill, ocross a stream and inlet of the lake is the suburb now called Anda Kadal; this is certainly derived from Amits bhavans, where there are numerous, though inconspicuous, renains. These may date back to King Meghavahana's time.

East of this, across a bay on which the Loper Asylum is now situated, is the village of Sudarbal; the ancient Sodars; it is the deepest part of the lake. Once a famous place of pilgrimage, it has now fallen into oblivion.

But that the famous Hazrat Bal shrine should be so close suggests a local heritage of fame and a transfer of reverence from Hindu stones to Muhammadan relica.

# EASTERN DISTRICT.

Pundrenthan has been noticed; at Zewan, 8 miles on, is a tank, probably the ancient pool of Jakawan. Two miles not, is a tank; more pool of Jakawan. Two miles not athrine on the hill side. Pampur is the ascient Padmayars and has the remains of more then one temple. Or ewa founded there by Padma in Xith Century. Wen and Khru are mentioned in the text as places of pingrimage, with sacred springs.

The rains of a temple at Ladu are of special interest on account of the circular cells.

The village of Latipura may be safely identified with Lalitapura, so called after King Lalitaditya, VIIIth Century.

The temples at Avantipura are described elsewhere (p. 114).

There are scattered traces of the ancient town. The shrine at the junction of the Vyath and Rembiara is very ancient and the near village of Martamnia is mentioned by Jonaraga.

Just below Bijbehars is the plateau where was once the famous temple of Nishnu Chakradhars; it was here that in the time of Sussals, about 1120 A. D., hundreds of people took refuge and were burnt with the temple. Beyond this was the town of Narapura, about which there is an ancient legend.

Bijbehara is the modern form of Vijavesvara, which is connected by tradition with a temple standing in the days of Asoka, who built a stone enclosure round it.

Up the Lidar Velley is Mamal temple opposite Pablgam identical with the action I Mannessvars. Beyond this towards the cave of \*marnath, are other sacred places mentioned by the old chroniclers. The Lake Susrawa now Shisha Nag and the small lakelet Jamatr (Zamatar Nag) then the high pass Wejvan to the five streams, Pantsatarangini.

Returning to the valley we find that Bhaumajo, Bawan, Birand, Shangas and Achibal are mentioned by Kalhana. Abul Fazad deveribes Kukar Mag and the intermittent spring of Sund-i-bran. The Vernag spring was then as now sacred, and so was the Vystwettar, one mile north-west of Vernag. It is said that Asokwe treeted many stynes near.

The associations of Shupiyon, Terar and Drang are within less remote time.

# WESTERN DISTRICT.

About 12 miles west of Srinagar is e Karews, which stretches from the Baramulla road to near Shadipur. This is the site of ancient famous Partiresspura, the capital of Laikaditys, VIIIth Century. Here the foundations of numerous once grand structures may be traced. Already about 900 A. D. the city was so far ruinous that Samkaravarma removed materials from there to Patran.

Nearer Shadipur is the village of Tregam; near which an ancient canal of large size connects the Panzaara swamp with the marshes round the wulse. At one point near Ekmanpur are the ruins of an ancient altice gate. Stein claims that this is really the former bed of the Vyath. I have examined it in flood time, and consider it was a natural passage which was deepened, perhaps by Suyya, to act as a flood outlet.

It is interesting to note that in this matter as in the proposed deepening of the river channel below Baramulla, Suyya forestalled modern engineers.

Five miles below Shadipur, near Sumbal, is Andarkot, the site of Jayapura, the capital of King Jayapida. Here there are some interesting remains.

At Patian the ancient temple ruins are still conspicuous but at Tapar, four miles north-nest, only the foundations are now visible. Nor are there any remains of interest at Sopor the ancient Suyyapura.

In many out-of-the-way villages chance travellers see wellcut stones of great size, and fragments of ancient foundations, pointing to the populour condition and relatively civilized state of Kashuir at the beginning of the Christian era.

#### CHAPTER X.

## LADAKH.

ASHMIR is half encircled by the Indus, the basin of which from its source to about longitude 7th? east, a distance of over 600 miles is usually called Little Thet. The upper half constitutes the province of Ladakh; the lower that of Skardo, to the west of which is the Governorship of Glight. These three form the Trans-Kashmir provinces of the Maharaja's territory.

Ladakh is a large tract of country, including Rupshu, Zanskar Nubra as well as Middle Ladakh, and the lofty plateaux south of the Karakorum, It contains the loftiest inhabited districts in the world. No part is below 8,000 feet, and a large portion of the population live at elevations of from 12,000 to 15,000 feet above the sea. While this is the height of the valleys and plateaux, the mountain ranges average from 17,000 to 21,000 feet, and many peaks are 25,000 feet high. Cultivation is dependent on irrigation. Wherever there is level ground, and irrigation is possible, there are villages which are as verdant in their easitic beauty as the mountains are grand in their barren massiveness. Being on the chief trade-route between Tibet and Western Asia, Yarkand and India, Ladakh has been traversed and described not only by sportsmen but by scientific and political travellers. Among those who have visited it may be mentioned Moorcraft, Gerard, Cunningham, Thompson, Forsyth's Mission, etc.

A British representative, called the Joint Commissioner, resides at Leh during the summer to supervise the trade traffic.

The history of Ladakh was closely connected with Tibet for very many conturies.

Travellers to Ladakh should read Francke's short "History of Western Tibet."

It seems clear that in the pre-Buddhist period, parts of Western Ladakh and Zanskar were cocupied by and Indo-Aryan tribe called "Mons," and that these were either driven out or in part subjugated. The Dards of Gligit and Astor also extended at another time up the Indus Valley to Lah itself; and their rock sculptures and drawings may be seen at Khalatse and Humpstatz. The Chinese may then have been over-lords. From Dr. Stein's researches at Khotan and the Lob Wor deserb it seems that the northern irrigable alopes of the Karakorum were partially settled with an Indian race. And it seems probable that Kanishka (second century B. C.) and some of his successor ruled so far north. Then from the Kashmir annals we learn that Minishaula (atth hortury A. D.) the white Hun King held Tartary as well as Northern India. A contury later La-Haditva reconquered Lafakin.

By the tenth century the Tibetan power began to push back the Dards, and for a long period Kings of Central Tibet ruled from near Lake Manasarowar to the Zoji Pass, The religious bond with Lhassa was tightened about 1300 A. D. and the old Bonchos demon worship was replaced by Lamaisia. Another 100 years later came Tsonkapa, the Lame reformer; but his success does not seem to have gone much deeper than the changed colour of the cap worn by Lamas, and local patriotic feeling favouring the red sect. One of the few noteworthy Kings, Sengge Namgyal invaded Central Tibet about 1610, and his son Deldan seems to have been powerful. Then came an invasion of Mongols, which was successfully resisted, but from this time the Ladakh power declined. King Deleg invoked the belp of Emperor Shah Jehan, and with the advent of Muhammadens who already held Baltistan and Puris, the western Lama Kingdom tottered to its final fall.

The Sikhs held Kashmir, and Raja Gulab Singh of Jammu sent a bold Dogra leader, Zorawar, who had already seized Kishtwar, across the passes to Ladakh. It is a romantic bit of history reminding one of Cortes and Mexico. Zorawer was a born leader, Ladakh and Baltistan were completely subdued; but reports of the gold of Lhasea drew Zorawer to a fatal expedition, when on the snowy heights near Manesarowar had his whole force experienced a fate like that of the British at the same time, on their retreat from Kabul. Peace was made and from that time resuming the conditions of a former treaty, made at fingneogang in the time of Deleg, the

Maharajas of Kashnir have sent embassies with presents, to Lhassa, every third year, and through the monks a close connection still exists. Thus the Lhassa authorities summoned the Lacalch monks to resist the proposed British Political Mission to Tibet in 1886. Ladakh was formally made over to Gulab Singh by the treaty which gave Itim Kashnir,

The population of Ladakh is 1,86,446. In Leh itself there are always many foreigners. Most of the population are settled, but some nomads or chang-pa inhabit the uplands of Rupshu. With the exception of some Muhammadan colonies, the people are Boddinist, belonging mestly to the sect of Rod Lamas. The restricted amount of cultivable land has caused the outious custom of polyandry, where the eldest son of each family chooses a wife and his brothers become also minor husbands. Taus, and by the celibory of hundreds of monks and nuns, the growth of the population is restrained. Throughout the country monasteries abound; but they are neither so large nor so rich as prior to the Degra sunexation, upon which thousands of monks field to Tibet.

The people are of Mongolian type—short, compact and give except in Nubra, the average height would scarcely exceed for feet. The men usually wear woellen caps with ear flaps, a pigtail, a very thick long-sleeved cloak or choga, loose tromsors and felt guitters and boots; the women long gowns, with plaited kirts, sheepskin chogas and a cloth cap. On gale days they wear flat head dresses ornamented with large turquoises and brilliant dresses. The monks and nuns wear red or yellow caps and have sheven heads. Other Ladakhis except the Muhammadans, wear pig-fails.

They are a contented cheerful moo, neither quarrelsome nor revengeful, or rarely so under the influence of chang, a sort of barley beer. They are moreover fairly honest and simple minded, and not so given to habitual lying as some naces. They are conspicuously lacking in chastity and cleanliness. From simple and natural marriage customs they are debarred by the restricted nature of the country, and by the intense cold of winter from ablutions, which they also dispense in summer by ohoice.

The climate is one of extremes. The heat in summer is considerable, owing to the vast tracts of barren rock and sand which reflect the heat poured down from a seldom clouded sky In winter the cold is of almost Arcticintensity and accompanied by bitter winds The daily variation is also very marked Snow in the Indus valley seldom falls to any depth, and in summer there are but a few slight showers. So that all vegetation is confined to irrigated land, with the exception of the stunted brushwood or very scanty growth of puplars or willows which is met within some few nullahs. Wherever in the ravines or slopes any area suitable for cultivation occurs, attempts are male to irrigate it by long and painfully constru ted canals Wheat, barlov and buck vheat are the only certals 1 et with Gram, a kind loose grained barley, is by far the most abundant, and grows at very high altitudes, ripening at 13,000 and even 14,900 feet above the sea. Orchards of apricots and aprico are met withir the warmer parts under 9,000 feet in the shade of which lucerne and other fodder plants are raised

Almost all the Ladakhis are agriculturists. The zho, a hybrid hetween the yak and common cow, is used for ploughing. The religious communities assist in cultivating the soil and are in many places the chief fandholders.

Trade is chiefly carried on by Yarkandis, or half breeds (Argon), Hindus from Hoshiarpur and Kulu, and the Muhammadans of Purig The trade products of the country are word, borns, salts and dired fruits "All the shiwl wool of Kashimir is from Ladakh, whose upland pastures, though burners support immense flocks of sheep and goats Many of the ravines still abound in sport The wild sheep (Ovis Yinge, Sharpu), Ovis Hodgson (Animon), Ovis Nahura (Kuhrel), the gazelle the grace full Tibetan antelope, the ibex, marmots and hares, are met with, in some parts sore leopards are not uncommon Red been are widely distributed. Wild yak are practically extinct.

Ladahh is a country with peculiar charms, utterly destitute of the verdant beauty of Kashmir, yet its lotty and v plains and rugged gramte ridges have beauties which all who have once been there can appreciate

#### ROUTE TO LADARH.

Of late years the road has been much improved, so that in summer several marches a day might be done on staging ponies. As far as the head of the Sind Valley the route has been already described (see pages 99-97).

SUMMARY OF ROUTE

Sonamarg to Leh		••	189½ miles.
" to Dras	••	••	3 marches.
DRAS to KARGIL	• •	••	2 ,,
KARGIL to LEH		••	7 "

Sixth march—Baltal to Matayan (the Tibetan names are

Shing Khang to Ambuti)-15 miles. To Leh 180.

At Baltal the character of the valley changes; the river emerger from an aurory agree, up which so long as the river in passable by snow bridges, there is a path to Amarmath. But the Ladakh read turns up a side millab, winding in summer by easy sigage up the slope on the left, this is a new well made road with much rock outsing; 2 miles to top of steep ascent, 3 on to top of watershed. In winter and spring travellers secend the rock-round ravine in which sown is then accumulated to an immense dopth. Laden ponies can seldom cross before Juna. The ascent is somewhat over 2,000 feet. The height of the Pass is about 11,300 feet. Its Tibetan name is the Zoji La. From Mange Parhat on the west, for several hundred miles, this is the most marked depression in the range. On other side mountains rise to a height of several, thousand feet.

It was near the summit of the pass, several centuries ago, that a battle took place between the Dras hillmen and the invaders from Jarkand, who put their assallants to flight, and entering Kashmir wintered there.

At KARTATRI, 3; miles from Ballal, is a fair camping ground.

The scenery completely changes on the north side of the rase. The lotty ranges cut off almost all moisture, and at every march the appearance becomes more Tibeten. Till the end of June there is usually a considerable quantity of snow along the summit of the Pass. The author has ascended by the ravine route in the middle of May; and heavy snow fell at night. There was then snow to Matayan.

In October snow may fall to a depth of several inches, but the Pass does not close to horses for more than a few days at a time till December. Get Dras pony men if possible. There is but a very gradual descent for several miles; small dak huts at intervals are built to keep open the communications during the winter. It is smetimes necessary to ford rivers, as the buildees may be swept away.

At mileage 71, by the new Gumber rest-hut is a path to Amarnath (see page 90).

(see page 90).

At Mirsalion 9th mile, there is a little summer colony and a new solid rest-house; but the first village is Matayan, 15 miles from Bolfal, and recknood as 61 marches from Bongar. No supplies can be obtained. There is a rest-house for travellers. A shikar path grown mallah to contact from Minimary, by which spartnessee and tops with the contact of the ship has sis crossed on the second day, and on the third day reach Publis. Except when there are you being the first which the state of the ship has sis crossed on the second day, and on the third day reach Publis. Except when there are you beinged his contact would be difficult with the state of t

Seventh march—Matayanta Draz—12 [ miles; to Leh 1612—A gradual decent. At a bend to the reat; a mile down, it but village of Prandas. Another 6 miles down-from this the open ratley of Dras is cartered. Passing the Sikh Port one comes to a small plantation of populars. Dras is a series of villages resultered over a broad and dettile valley. It is inabileted partily by Drafe, party by Baltis. Her are post and telegraph offices; granury, also a bangalow for travellers, for which Re. I a day is charged. Posy rate 12 mans.

Drasis over 10,000 sectand is swept by cold winds (for route to Suru see page 147). Drasis called Hembahas by Tibetans. To Lim 131; miles.

Eight march. Dax to Shireka Kharka.—23, miles.—For 7 miles theread leads down the valley, which gradually contants and then bends northward. At the course is the village of Dundul Thang. Blow this the scenery becomes bolder, and the valley very narrow. Tashgam, foreity the stage, is 16 miles; rows the river, thence to Kharita 47 miles; laure is a rest-houre, and small plantation of villows. An extra charge is made for this long stage. Four yate Rs. 1-5-0.

Ninth march-S. Kharbu to Kargil-161 miles. The road ascends over a spur opposite the Shingo river. The Shingo Kullah leads up to the Deosai plateau, and is known for bears and game. Eight miles down from Kharbu, on the opposite side, is the large village of KARKITCHU. At Chanegund the valley is rather more open, and for a mile or two beyond the traveller enjoys the contrast from the ragged barrenness behind and before. A few miles march along the face of precipices and then along the sandy banks, takes one to the junction with the Suru river. Here is a good suspension bridge, with Kharal just beyond. The Skardo road crosses and follows down the river. The Leh road keeps to the right and keeps for 2 miles up the bank of the Suru, here a swift, somewhat shallow but broad stream, to Kargil. Coming from Dras one has gradually descended to 8,700 feet. From here there is again a gradual ascent. Kargil is an extensive place; miles of alluvium are here under irrigation, and on either side of the river there are scattered villages. It is the capital of Purik, province chiefly inhabited by Ladakhis, who have embraced Muhammadanism, and subordinate to the Government of Baltistan. Pony rate Re. 1.

There is a large semi and good rest-house for European travellers. Also post and telegraph offices. The Strau river is bridged one mile above the Sikh Fort. There is an extensive view of an amphilheatre of mountains. Up the valley to the south is the Sura district, with the Eheckel Pass to the Wardwan. Across to the east is a low eary Pass HARMOTTER.

high,

La, 13,500, to Lakun village and plain, seven hours' march. This is the nearest route to the Shayok (see pages 167-8).

Tenth march-Kargil to Maulba Chamba-23 miles.-The Suru river is left behind, with its picturesque banks and lovely distant peaks; and the path crossing the wide open valley, leads over a sandy plateau. Seven miles on is PASHKYUM, a very large village dominated at the upper end by a fort crowned rock, the scene of a brielliant coun domain by the Dogras on their occupation of the country. Beyond this the road enters a gradually contracting ravine, and the scenery becomes even grander. There are one or two picturesque villages, spots of verdure in this otherwise barren chaos of rocks and sand. The march may be halved by camping at Loszsum (or Lanchan) at 14th mile. From here a path branches north-west to the Lalun plain, seven hours' march. The new road, a good one, continues up the right bank, passing the bridge to SHERGOLat the head of the mullah. Shergol is seen on the right. At Shergol the valley again opens. This is the first stage where Buddhists are met with. The geology of the region passed through is of great interest, the sandstone rocks are of briglliant colour and sharply cut outline.

Three miles up is MAULBECK, or Maulba Chambe, a village clustering at the foot of a spire-likerock, on which is perched a Lamasery, or Buddhist monatery. Nearby is a large figure of Chamba carved on the face of the rocks.

There is an extra charge for this long stage. Rs. 1-6-0.

The rest-house is pleasantly situated on the polo-ground, well away below the village.

Elsventh march—Maulha Chamba to Bod Kharlm—Ma miles: to Leh Si milea.—The path rises by very gradual and easy accent in 7 miles to the Namkalla, a Pass 13,000 feethigh; then descends end, following up a stream of some size in an open walley, comes to Kharnu, or rather to a group of villages of which Kharlu is the other. This was the scene of some fighting in King Deldan's time (1620—1640 A.D.). The ridges are covered with rains of old castles. On the opposite side of the river is another pointed rode covered with buildings, called Stacktee.

It is a pretty valley at about 11,000 feet above the sea, well cultivated but has no fruit trees. A decentrest-house for visitors is in the village, and a good camping-ground beyond. Pany rate 15 annas.

Chroman is another old castle, down the valley to the north, and formerly the Sultan of Chigtan ruled most of Piurig district (see Franck's History, p. 103).

History, p. 103).

Twelfth march—Bod Kharbu to Lamayuru—15 miles.—This march in 10 miles crosses the Fotu La, a very easy pass about 13,400 feet

On this march the traveller may see flex or sharps. The route to Karoz turns to the south half-way up the pass. The view from the summit is splendid.

LAMAYARVIS 5 miles beyond this, and about 2,000 feet lower. There is a good sized village and large monastery built on the top of some low cliffs. This should certainly be visited, and the fine image of Chunraig be seen.

There is a good rest-house and a granary. Pony rate Ro. 1.

Thirteeth march—tamayaru to Kuris—138 miles : to Leb. 63 miles.—The path following down the narcon varies between elfies which force the road to cross and recross the torrent several times, at less open since the lands Valley. At a narrowphose dominated by fort there is a supposion bridge over the Indas. Khalatse, a large village, with pleasant encompage ground, lies a mile or so further on 3 hours from Lamayare, 55 miles from Leb. There is a fair rest-bouce, and a post-offer. On a cliff to the contract of the contract o

Killalizz To Norica, about 3 miles, mostly stony and quite shadeless, fairly level. Agricots and mulberries ripen in these villages by midlally. One can get shady comming-ground; and the real-boutes are clean and cool. Hetween 11 a.m. and 8 p.m. the heat is very great if travelline.

From Khalatso there is an obsolete pathway from the river as follows:—

Khalatse to Timisgam, 10 miles.— The Tinamagang—Follows the Indus for a few miles, turn up a side ravine, assend about 1,500 feet, cross a plain, deceend a vailey, in which is Timisgam.

Timisgam to Himis Shukpe, thence to Tamise, 7 miles.—The Hem Shugpachan—Again up, across the plateau, with occasional ravines to be crossed.

Tamtse via Bazgu to Nyemo .- 10 miles.

At Bazou the main route is reloined, which we will now trace.

Fourteenth march—Nuts to Sappil, 142 miles: to Lab, 45 miles. The scenery is grander than on the preceding march. In these 145 miles there is but one poor stelp of regolation; but so Sasput there is abundant cultivation. Rest-house and grantry. Across the bridge, about 2 miles is the interesting Alohi monstery, with its trace of Kashmirworkmanhip. There is a cove monastery of Nyisiapug, ruined in the Balti Ware. P. R. 14st.

Fittenth march—Sayul to Nimu, 112 miles: to Leb. 36; miles.— Thercoal leaves then'tee, crosses poltocus, thou decounds to Burgs, and picturesque village; the cities are studded with old ruins, the roots are of brilliant colour and fastactic lange. There is a pleasant gueden in which to encamp, also a bumpalow. Here are bilaterical monastery and coastle which to encamp, also a bumpalow. Here are bilaterical monastery and coastle which were long beategod by Monagals in the time of Clyna Delage (1640—1680). A. D. Ritura is some 4 miles further on. Rest-house and garden. P. B. 114.

Sixteenth march—Rimu to Leh. 172 miles.—Again leaving the river at Nimu, and ascending the plateau, the valley is seen to open out. Gradually descending we reach at 10½ miles the Physung nullah, which is the best stags to halt st, if Baggu was the provious halting place. At Physung is a famous monastery, 400 years old. Three miles on, the river is rejoined and followed to Byitok, a large village of instering round an isolated hill. On this is a picture squeeze monastery built 500 years ago by Gyapo Bumide. Here the Leh Valley is fairly entered; the read turns away from the river and with a very gradual ascent of a bout 1,000 feet in 4 miles leads to Leh, which is seen from a long distance. There is here a good dak bungalow, P. R. Rs. 1-2.

LEH is a town of several thousand inhabitants; there is a broad hazar, close to which rises a spur on which stard the old palace, a monastery and other buildings. Leh has numerous plantations, in one of which is the Joint Commissioner's house and the dak bungalow. There is an English post office.

The Moravian Mission has a hospital and school here. The author has been indebted for the Thetan names and various notes to the late Row R. Reddlob, an indefatigable missionary and good linguist, who died in 1891 within a week of his colleague, Dr. Karl herr. There are Moravian Missions also at Kailang and Po. Those missionaries are very frugal and devoted. The Mission Hospital was for many years under Dr. Ernest Shawe who died in 1807 mourand by all Ladakh. Rev. Mr. Francist, the author of the "History of Wostern Tibet" worked many years at Khalatee. Heis the foremost living authority on ancient Tibetan Scrip.

Whether as the western capital of Lamaism, with its Lamaseries, Chortens and Manis; or as the contre of the Yarkand and Tibetan traffic, with its interesting articles of commerce and quaint figures of many nationalities, Leh is a place abounding in attraction for lovers of the picturesque.

At Leh the traveller should see the old palace of Sengge Namyal, the great idol Maitreya in a monastery on Namyark, some hill, the chorten "on yellow carg." a mile above Leh, where there are some supposed graves of ancient Dards, the longest mani wall in the country at Tewar gorge, 850 paces long and other interesting places.

The Hemis Festaval is also well worth a long journey. The great Hemis monastery is about 24 miles from Leh, the miracle play is towards the end of June.

# THE UPPER INDUS VALLEY.

"The Indus is already a considerable stream when it enters Ladakh. Near the Chinese frontier it flows between low sand banks on an open valley. Below the influx of the Hanle stream it becomes a rushing torrent confined within narrow walls; opposite Leh, it has room to spread out and divides into various streams, but it is soon confined again, and rushes through ravines, the mountains becoming closer and closer until in Lower Ladakh the Indus runs through a very narrow. almost inaccessible gorge"-(B. Shawe). In this distance it descends several thousand feet, and the climate alters much. The upper eastern valleys are inhabited by nomads during the summer months. In Central Ladakh there are villages wherever water is obtainable to irrigate the stony or sandy fans : and crops ripen in August or September. In Lower Ladakh the summer heat is considerable, and two crops can be raised annual-Iv: while apples and walnuts ripen. But the sun heat is very great even on the high plateaux, where it freezes every night, A black bulb thermometer placed in the sun often registers 25" higher at Leh than in the plains of India. Honos the height at which cultivation exists. Crops ripen up to 14,000 feet though an early snowfall occavionally spoils the harvest.

In Kashmir there is scarcely any arable laud above 7,000 feet and even at that height the crops often fail to ripen.

The rivers rise enormously in summer. Shawe estimates that the Indus at Leh discharges 6,000 gallons per second in winter, and \$4,000 gallons per second in aunmar. The Zaukar river is about the same size. The Shayok river is estimated at the point of junction to be equal to the Indus, the two together at Shardo giving in summer 250,000 gallons per second.

## LADAKH ROUTES.

The chief trade routes from Leh are south to Simla, cast to Lhassa, and west to Kaslmir and north to Yarkand via Nubra (aummer) and Shyok (winter) (this is the main road). The Simla routes are given in the tables at the end. We

Map 45 E., Approx, 34° N. 78° 3′ E.

first took east.

Leh to Pangong Lake—(Route by Lientenant Watts Jones, R. E.). Leh to Ranbirpur—13 miles.—Essy march up Indus Valley.

- Ranbirpur to Chemire, 15 miles and Sakti, 19 miles.—Up Indus Valley, large village with a good serai; take on coolies for next four manches.
- 3. Sakti to Camp Zingrul, 5 miles.—A steady ascent to 16,400 feet.
- Zingrul to Tsulfak (camp), 11 miles.—An easy ascent to Chang La 18.400 feet and descent.
- La 18,400 feet and descent.

  5. Tsultak to Durgu, 11 miles.—An easy march, small village at -

height 13.000 feet, a rest-house, no supplies.

6. Durgu to Tankiss—7 miles.—Here a village, only satoo obtainable, take ponies or vaks on from here to Sheshul.

Tankise to Tsearh Tse or better known as Chakkar Talso, 15 miles.— Near to small lakes. If going to Chang Chenmo go from Tankise to a hamlet, 11 miles, theuse to Ludkbung, 11 miles,

- 8. Tsearh Tso or Chakkar Talao to Camp in sandhilis, 13 miles.—On Pangong Lake.
- 9. Camp to Mun—2 miles.—Along south shore of lake ; small village rest-house.
- Mun to Meruk (camp)—7½ miles.—Still along lake; 3 houses only.
- Meruk to Shushul—15 miles.—Large village; rest-houses, height 14,200 feet.

Note.—All supplies should be taken from Leh. Fuel (bortan), is abundant, grass for yake at the camping places, but not generally elsewhere. The road is fairly easy throughout A new trade route in Changle and Shayok has been opened to Karakorum, though not generally used, traders preferring the shorter (by 3 marches) though more difficult and dangerous route.

- Chushal to Camp by Lake, 14 miles.—N.-W. of Tsaka La, about 5 miles. Water and fuel abundant, steady rise.
- Camp to Dungti, 16 miles.—Fuel dung, water indifferent. When Indus is low, river can be forded here.
- 14. Dungti to Nimu-mud—20 miles.—Camp by ferry, fuel from villages, water from Indus. Ferry consists of 2 yaks, crew 2 men, capacity about 3 ordinary men or their weight in loads, i. e., 45 or 5 maunds.
- Nimu-mud to Camp on Hanle river, about 14 miles.—Fuel and water abundant. Mosquitoes bad.
- Camp to Hanle, 21 miles.—Note (as on Deceai plains, mosquitoes pestilential in July, August and September, veils advisable.

### HANLE TO KYELANG.

# (By Col. L. A. Watson).

This route depends on grass and where relief vaks will be found.

- Haule to Dungen—16 miles.—Fuel bortes and dung. No water on road to within 3 miles of camp (August-September).
  - 2. Dungon to Kyun Lake-15 miles.-Steady pull up. Fuel dung.
  - 3. Kyun to Unti-11 miles.
- Unti to Pelde, N. end of Tsomoriri Lake—18 miles.—For several
  miles skirt the lake heavy going. No water on read. The se-called village
  Karzek is close by, but consists of only 2 houses, of which one is a gompa.
- Peldo to Neder, 14 miles.—Path skirts mountain by N. to W. A shorter but more difficult track crosses the mountain from near Karzok. Ample water, dung fuel.
- Riedar to Phirsi—14 miles.—Across Sharma La and camp close to junction of Sharma and Phirsa nullaha.
  - 7. Phirisi to Pang-10 miles.-Join Ladak road.

# PANGONG LAKE.

The Pangong Lake belongs to the same type as the many salt lakes of Central Asia, and evidences the same progressive dessignation. At one time its shore was hundreds of feet higher than at present. Its length must then have been much greater than now, but the whole chain of lakes is still over ninety miles long, and from two to four miles broad. On the centre of its length, for many miles it narrows to a mere channel of still water. The colour is an exquisite sapphire blue, with which the orange and carmine tints of the sunset light on the mountains form wonderous combinations of rare beauty. The formation of this lake, as also others which will be mentioned, is accounted for thus. The central valley having been eroded to its present extent, the current became too slow or too small to sweep away the deposit brought from a side valley by one of its tributaries; the waters were gradually diverted, and finally obstructed by the formation of an alluvial dam which accumulated to a great height damming back the waters. (To a similar cause but more

rapid in action and of glacial origin, may be attributed the Shayok flood of 1842, of which the disastrous results are still visible). With a large surface exposed to evaporation, and but small supply of water, the lake has never accumulated sufficiently to overtop its barriers, and then cut down a new channel, as the Indus has done in several parts of its upper course; and thus it is becoming yearly more saline. The depth is nowhere great; and a few centuries may transform it into another of those salt beds which abound in this region—Huntington's "Pulso of Asia."

The great plateaux lie to the north of Palgong. The sportsman should hire ponies or yaks at Tanktse and lay in all supplies for his caravan. The stages are (Ward):

- Tsearh Tse or Chakkar Talae to Phobrang—14 miles—15,000 feet.—There are shooting grounds at Montel and Koh-Laba. Pass Luckung 9 miles.
- Phobrang, to Rimdli—15 miles.—Height 17,500 feet. Cross. Marsamik La 18,400 feet. Fuel mostly dung.
- 3. Rimdil to Tsolu—14 miles.—Height 15,000 feet. Pamzal is about 2 miles off and is where ponies go to graze.
- 4. Tsolu to Kyam—12 miles.—Ford Chang Chenmo river twice. In June and July this should only be attempted between 10 a.m. and 4 p.m.
- Rimdi to Pauzal—14 miles.—Height 14,800 feet. Camp in Chang Chenmo Valley, near river, fuel abundant, 34° 15′ N. 79° E. approx.
- The great journey of Captain Bower and Doctor Thorold in 1891 led right across these lefty plains for several mouths, They saw much game and occasionally met annual Thotans. There are many large sait lakes. Not many marches north-east of Lihassa the exploiers were forcibly turned back, and compelled to take a more northerly route. The whole journey through Thet was at a height of over 14,000 feet.

In 1895, Mr. and Mrs. Littledale and Mr. Eletcher traversed parts of the same route, crossing into Tibet from Yarkand and reaching to within two days' journey of Lhassa; when checked they turned west by the trade route to Rudokh.

The exploration of Dr. Sven Hedin in 1907 may be said to complete our knowledge of the sources of the Indus, Sutley and Brahmaputra; he twice crossed the great plains, a second time in the depth of winter and explored the Trans-Himslayas.

The Dipsang, Lingshithang, and Kuenlun are wide salt plains of lacestrine origin, at an elevation of from 16,000 to 17,300 feet.

Across or skirting them, there are several tracks followed by ceravans to Yarkand in the summer.

On the plains and in the adjoining valleys are found the wild yak and the kyang; the latter, however, is more abundant in Rupshu. Tibetan antelopes are found in the Chang Chenmo.

The plains are bordered by mountains rising to about 21,000 feet. These may be considered the eastern continuation of the Karakorum range.

Westward the peaks rise to 25,000 feet and over, and still further, when, termed the Mustagh, there are peaks over 26,000 feet—one "K. 2" being 28,200 feet high. This is now known as Mount Godwin Austen or as Chogori.

The known passes over these ranges are few.

The Chang Chenmo route crosses on entering and leaving the plateaux and another over the Karatagh, and then joins the Karakorum route.

The Karakorum route crosses, after leaving Nuhra, the Saser (17,500 feet); then the Karakorum (18,390 feet) between the Shayok and the Yarkand river. At Aktagh the Chang Chemme route is joined; then the Suke' Pass (18,200 feet) to the Karakash viver's crosses(j and finally, one of the passes across the Kilian range north of Shahdula. In winter the usual Karakorum route turns north-west from Aktagh and across the Yangi Pass.

As a whole the mountainous region of Ladakh is for its height the easiest in the world. The snowfall is little and the snow line is above 18,000 feet. The valleys are silted up, and the rivers often shellow though very wide.

There are many hamlets at a great elevation.

Climbers might well direct their attention to any practicable peaks of the Karakorum, before attempting the lar mare difficult mountains to the west.

Between the left bank of the Upper Indus and the high middle Himalayas lie the districts of Rupshu, Zanzskar and Surn. A few words must suffice for these. Rupshu is the highest inhabited country in the world. It is inhabited by the Changps, a nomad race who live at from 13,500 to 16,500 feet, and even in one or two parts raise scanty crops of barley and poss at 13,000 feet above sea level.

The country has been called "a knot of mountains," for the ranges have no distinct form. Many of the high valleys do not drain at all and contain salt lakes; two of these, the Teoka, are drying up. The shepherd inhabitents live in felt tents, which they move from place to place, while their flocks obtain a scanty sustenance from the stony valleys and bare mounttain sides.

Over these lefty valleys lie the routes from Spiti and Lahoul to Loh, the chief passes on the south being the Bara Lacha (16,200 feet and the Parang 18,300 feet), and on the north the Tagiang (17,500 feet).

The trade route (13 in Route Tables) from Kulu to Leh and Tibet crosses Rupshu, entoring it by the Bara Lacha Pass. The Leh route leaves Rupshu by the Taglang Pass. The Tibet route, by which immense caravans of laden sheep travel, branches off at Rukshin, thence round to the Salt Lake, and over the Polokonka Pass (16,400 feet) and through the Pugs Valley reaches the Indus at Mahiye.

There is a route to Pangong as follows (authority Lieutenant Watts Jones, R. E.):—

\*Rukshin to Pangong, 6 marches-77° 50′ 33° 20′ Map 64.

- 1. Rukshin to Sait Lake, 13 miles.—Get yake at Debring. No supplies can be got. There is bortsa for fuel and grass for the yaks.
- Salt Lake Camp to Puga (camp), 25 miles.—Across Polokongka La (16,400 feet), easy.
- 3. Puga to Mahiye (camp), 25 miles.—Cross Indus by ford or akin raft from Nimu-mud. One hut. Get yaks from Nimu-mud.
  - Mahiye to Yahle (camp), 18 miles.
- Yahle to State-Iso (samp), 9 miles.—Cross the easy usually snowless State Le (17,000 feet).

State-ise to Shushul, 12 miles.—Here is a village, height 14,200 feet and join route to Leh via Tanktoe (see above).

An alternative route from Shushul to Chang Chenmo goes rie Kurnak—(Ward: —78\* 35' 33\* 35' N.

- Shushul to (camp)—14 miles.—Go cast to Pangong Lake and around to foot of pass.
- . Camp to Camp by Pangong Lake, 9 miles.—Cross any easy Pass. Sometimes no fresh water here.
  - 3. Camp to Dongure, 13 miles.

4 and 5. Treakpu Kurte, about 40 miles up the Changung Yokma, then up the Mipai loomba. No supplies anywhere.

#### SHAYOK AND NUBRA.

The upper Shayok may be reached vis Tanktse, crossing the Alangla, what is the easiest of the passes morth of the Indus. A new bridle path has been constructed vio the Changla to Shayok village, thence up the left bank only used in winter by caravans. There are direct runte from Loh to Nabra by either Diger or Khardong Passes.

The following route by the Diger Passes is usually passable at all seasons and has less snow than the Khardong but the road is not kept so well.

 Leh to Camp, 11 miles.—Skirt mountains east of Leh. Four miles on is Sabu; then steady easy ascent up nullah. Camp near dak hut, fire wood in late summer; height 15,000 feet.

Camp Diger, 25 miles.—Stern rigrag, ascent 2,000 feet. Snow on both sides of Diger La or Lasman La (map). Easy descent to village Diger; height 13,500 feet.
 Diger to Khalsar, 25 miles.—Long descent to Shavok, follow

 Diger to Anaisar, 25 miles.—Long descent to Snayok, follow down left bank, join Khardong route.

#### KHARODONG ROUTE.

- Leh te Sumbeg, 11 miles.—Good bridle road, steady ascent all way. Camp also shelter but higher up about 3 hours ascent, 15,000 feet.
- Sumbog to Khardeng, 16 miles.—Steep ascent 14 hours partly over anow (till August) to Pass. 17,400 feet steep descent sometimes dangerous from avalanches, 1,500 feet to turn, then gradual down rocky, then grassy valley to villago. Camp in enclosure where villows, close to sered.
- Khardeng to Khalsar, 9 miles.—Steep down narrow gorge to Shayok, 2,500 feet in 5 miles, then along left bank, 4 miles, to stage Khalsar where there is good shade and village.

4. Khalsar to Tagur, 14 miles.—Along Shayok, sandy, at 3 miles eroes suspension bridge to right bank, 3 miles to pretty village Tirit; then turn north µp Nubra vallay; sandy maidan with thom banks, do, then more extensive cultivation, Kielkung and Summur. Tagur is the chief village. From the Santeling Gompa a fine view. This is an interesting monastery of yellow Lamas.

 Tagur to Panamik, 12 miles.—Cross sandy and stony maidan with one or two villages and struggling cultivation. Ford some swift side-streams. Panamik a pleasant place, and fine view. Hot spring at

source 150° F., in baths 120° F.

The stages from Leh might be first day Khardong, second Tirit, third Panamik.

6. Panamik to Camp Umlung, 15 miles.—Through oultivation for some miles, then stony and sandy plain, 0 miles, cross Tillam Baut river; up a well graded sigzag over the cliff at entrance of nutlah, then descend to the river at Umlung where a cremped camping-ground, 15 miles from Penamik; then 6 miles up right bank cross bridge, 4 miles on to camp Tutiyalik near foot of Margistan Glacier, 14 marches, 22 miles. The old road over the Chanlung joins about 4 miles up the nublah. In 1908, Captain Oliver and the author explored the Margistan Glacier height of over 20,000 feet. For rest of route see Route Tables.

The Nubra Valley is open, being from 2 to 3 miles wide and is bounded on the east and north by gigantic snow peaks, Supplies are abundant, and it should be a good sporting ground for ibex as well as burhel. In 1897 G. W. Millais, G. Tyndale Biscoe and the author explored the narrow ravine cast of Panamik camping at 29,000 feet, and ascending a peak of 21,000 feet (boiling point observations). The main Saser range has three peaks of from 24,000 to 25,100 feet. The highest of these would be best attacked from the main route to Yarkand, camping at Changposhi, and then selecting one of the ridges leading south-east. But the mountains are steep, and the ice cap formidable. Dr. Longstaff, Lt. Slingsby and the author discovered in 1909 a great glacier lying north of Saltoro Pass (35° 30' N. 76° 55' E.) originating near Mount Gasherbrum and going east. Dr. Longstaff subsequently ascended from Nubra and proved it to be the Sia Chen Glacier, and the biggest known glacier in Asia. This has since been explored by Mrs. Bullock Workman, and thoroughly mapped.

Dr. do Filippi and a party of experts made a thorough exploration and study of the sources of the Shayok and Yarkand rivers during 1914. The stages up the Nubra from Pan muk are-

- 1 Kimi, 15 miles, 7 hours—Cross bridge at 5 miles to Kuvet, then up right bank, chiefly through cultivation Arano, 2 hours, then 2½ hours along hillside Good path
- 2 Kimi to Gongo, 3 hours, 8 miles—Pass villages Nyungsted Zangsar, and ford some swift snow torrents The monastery called Gongo is the furthest inhabited place Filgrims visit it every third year The "heavenly light" described and theorised upon in former editions of this Guide Book resolved testel into some bright coloured patch of hohen on a grand flat grante cliff, part of which looks strangely like a Buddhist clorten Suggestion does the rest Beyond Gongo the route up the valley is only possible quite early or late in the year when the river is fordable
  - Returning it is 1 march, 10 hours from Gonpo to Kuvet
- 2 Thence to Charasa, about 13 miles, 8 hours —Most of the way a fars path along the hillside, and the last few miles on the flat, with grass, sand and cultivation The limestones knoll with old castle and mionastery is very p oturesque

Nubra to Khapallu (compare details on page 167)

- 3 Charasa to Mondart.—18 miles —Sandy path down valley to Shayok, 6 miles, then rough path along shift for 8 miles, impassable for laden ammals when river is full, when 10 miles along sandy banks. A trying march, no drinking water 10 hours. Camp at village, can sometimes oross by slain raft to left bank.
- 4 Mondari to Unmaru, 8 miles —An easy path for 5 miles, then loose sand 2 miles Time 3½ hours
- 5 Unmaru to Waris 17 miles —Rough path, one bad bit of chift path leaves the river, ascend into a side nullah where Waris is
- 6 Wans to Biagdaugdo, 9 nules —Up over a pass 14,000 feet, then steep descent to another side nullah and follow down to Shayok. Village at junction
- 7 Biagdangdo to Turtok, 16 miles —Down right bank pass Chalanka two thirds of way, cross bridge
  - 8 Turtok to Prahnu, 12 miles —On left bank, cross at stage to right
- 9 Prahnu to Payan (Paxjain map), 12 miles—On right bank a good deal of cultivation Cross at Saksa, join Chorbat route (see page 167)
  - 10 Payan to Lanka, 13 miles, 6 hours For detail (see page 167)
- 11 Lanka to Khapallu, 11 miles, 1½ hours—Gradually ascend round hill and reach plateau, thence 5 hours on, last half hour descend to villages, camp near Raja s lower house
- N B—In 1912 a pony road was completed on the left from Tiribridge down to khapallu

In going to Saltoro, the ferry is at Sirmu, half-way from Lanka to Khapallu, but take the lower road along the river.

In winter the path is under the cliffs instead of over them, and at

times it is right along the frozen river.

Longstati made a pass from Goma in the Upper Saltoro, by the Chulang Glacier to Chulunka; it was difficult for coolies.

#### ZANSKAR.

South-west of Ladakh lies the wild glacial region of Zanakar. The only inhabited portions of this district are the generally narrow ravines of the Zanakar river. The population is very small, probably not more than 2,500 people,—Drew.

The climate is very rigorous; more snow falls and fiercer winds blow than in Central Ladakh. Trees are very scanty even at the villages, and are unknown elsewhere. With difficulty are the crops ripened. Communication with the outer world is almost out off during most of the year. There is only a very difficult and droutious route even to Leh.

Most of the passes to Lahoul, Padar or Suru are rough addishorious. The Shingkun Pass to Lahoul is not very difficult and from July to October is crossed by laden ponies. The Penso Pass into Suru is the ensiest (p. 211).

Zanskar to Kishtwar, see below.

Do. to Leh via Lamayura, also see below, also route 17.

Do. to Lahoul, see route 16.

Do. to Kashmir via Suru, see route 16.

An interesting circular tour would be to go from Kashmir by Wardwan, Suru and Rungdum to Zanskar, returning by Wan La, Lamayuru and Kargil (see pages 130, 148, and Route Tables).

### ROUTES INTO KASHMIR.

KISHTWAR TO ZANSKAR FIA UMASILA, JUNE—JULY 1907. By W. S. TALBOT, Esc., I.C.S.

(1) Kishtwar to Bhagus, 6‡ hours.—(The times given unless otherwhate stated in all cases allow for walking, going easy, with nunerous short halts but no long ones). Path for first 2 of a fille edges up the long spur which divides Kishtwar on the east from the Chanab valley, a considerable but vary gradual ascent to the corner, where one gots at once into thick broad-leaded torest, with fine views up the valley. This continues for the cest of the march, with a couple of small villages at intervals, good water about frick through the march Camp at about 6,000 feet on cultivated land; good water. Flies troublesome.

- (2) Bhagna to Flyes, 23 hours.—The path much the same as on previous march, a good stride-path keeping a great height above the frier, constantly ascerding and descending to crave stream or get round spura of often very steep. One village parsed—Gallar. Fine waterfall near end of march. Camp on a broad terrace on the hillied, small rillinge and other engine pisco) shit but pite hill, about a,600 feet.
- (3) Plyas to Shasil—Time not noted, but about the same as the last-march. The path becomes bad on this nursh, a percentage of it consisting of wooden galleries carried along callful high above this river; the galleries fairly rotten and broken away in place; if anderstand that the path has been repaired since, and that the Forest Department are now making a new one low down by the river). Plenty of good water on this march.

Another camping place at Lidvari, 3 miles or so from Piyas; very cramped with a noisy waterfall a few yards away.

Path is up and down, mostly steep, all the way. The chilgore, or edible pine, in considerable numbers. Views are very face on this march, especially the first part, though the Brahma peaks keep out of sight all the time.

Camp at Shashu, about 3,900 feet, not much above the river; it is far from roomy. Tahr are numerous on the hills across the river, and can generally be seen opposite in the crening.

(4) Shashu to Gulabgarh, 6½ hours.—The first part of the march the path is bad, as on preceding one; about half-way the valley opens out and the path is again a good one creening soon alterwards into terraced outlivration, with a number of small villages. Last few miles over glaring river sand in a hot sun.

For first three hours no drinkable water, the only big side-stream being crossed to a bridge 276 feet above water-level. After that water is plentiful and good until the cultivation begins.

The last village passed is Atholi, police station, dispensary, post office.

Chenab crossed by a good cantilover bridge. Camp near Tabell.

Chensb crossed by a good cantilever bridge. Comp near Tabsil office on a sandy maidsn at junction of Chenab and Bhutna rivers. A very windy place. Height about 6,000 feet.

(5) Guishgark is Othasholl, 61 hours.—A good rideable path. Cross Bhutan river by good bridge at the start. There very fine doedars by Matti village olose by ; first faw miles through steeply terraced cellivation, then this forest, cross and rowness the stream by fair bridges, passing some good waterful, and so to small village of Chashold. Camp at a board 5,000 feet under some fine aki popiars. An easy march with a steady but gontle up-hill gradient, fine views, and plenty of good water. (6) Chashoti to Dangal—A very short and easy march of about 4 hours; path not so good but still rideable. Machel is passed after crossing tributery torrent from the west. There are the winter quarters of the military guard over the Sukoham asphitre mines. The small villages above this (Desseni, Dangel, etc.) are Buddhist.

Camp at 9,200 fact at edge of dense forest of firs and birohes, near mouth of Danlong nullah. The Mil above Machel and all along to Dangel is part of sapphire mine area in which no one is allowed. It is also a sanctuary for thex.

(?) Dangel to Bulwas.—A short march of 4½ hours, easy going. Coolies are taken through from hero to Zanskur, 4 marches, and as they only carry half loads on the pass a good many are required.

One hour to Jashicari, a smell hamlet; i hour more to Sukcham, its last village usually called Sumjam. It menty one house, with a hole under a rock for the sepoys. The mine is far up the steep hillide to north, and on June 22nd was still under snow. After Sukcham the valley opens out and forest disappears. Comp on a broad grassy maidan at a hout 1,500 feet, plenty of birch fuel. A very fine peak opposite and a circle of snows up the nullsh.

(8) Bulwas to Bigjani,—A very abort march of 3½ hours, but steep, after a mile or two puts broad Bajwas nullah, the path turns to the left and sigzage up the steep side of a branch nullah ; after 1,000 feet or so the nullah opens out into a wide basin, afterwards ascent is easier though still fairly steen, only coassional anow.

The proper halting place, being still deep in snow, camped about 500 feet below at about 14,500 feet in a very cramped place with snow around and an icefall of a big glacier alongside. Not much shelter for cooles. Fuel of course has to be brought up from below.

(9) Bigiani to Gahaura, 9½ hours, but this was unnecessarily long as having no one who had crossed the pass this year, I took the wrong way, and wasted much time. Coolies followed the same route and took nearly 12 hours.

At start a steep climb of 500 feet to the usual camping-ground, thence a mile or two easy going over a broad glacier filled mullah (deep in snow). From head of mullah, at about 15,00 feet very steep ascent up mow-ice, slope for about a thousand feet, thence a steady grind of about 5 hours to top of Umai Pass (resched about 5 hours out) over snow fields, height 17,307 feet.

About 1,500 feet down steep slopes of soft anow, then some miles of gradually falling snow fields, and about 4 miles on over a confused jungle of fallen rocks to Gahaura (tahsii Kargil).

Camp at 13,500 feet; bortes fuel; a good spring befouled by previous travellers.

Most of the servants and some coolles knocked up with snow sickness in crossing the pass.

The alternative path on the south side of the nullsh above Bigjani ahould be easier.

(10) Gahaura to Atingi, 25 hours.—A fair path down the nullah, which hears a certain amount of dwarf willow and other vegetation. Emerged into the wide Zanakar valley a mile across at the bottom, with a roomy and greasy camping-ground. The village is a small one at about 12.000 feet.

Rock pigeons are fairly plentiful and useful as murghis are unobtainable in Zanskar (fowls and eggs are also practically unobtainable in Padar).

- (11) Affingt fo Kührak, which is close to Pedam, the old ampliad to Zanakra nov in raine. About it Builes, sary going all the very, anathy alongside the rive, but the last part is even a bare plain, stones and sand would be tedium walking. Affair big goons at foint hall-way plain have and mattereseive. Eather a strong side stream crossed effer Senty abdulb acrossed fairly sarly in the edy. 31 is constitute bridged. Eather a strong side stream crossed effer Senty and 11,769 feet. Strong wind in afternoon, usual in Zanakra as in Lankith. Barganco no position.
- (12) Kishrak to Tongde, a very short march of 2½ hours or so riding partly. Cross Nunak river by an easy jhula at the start. Rest of march over bare stony slopes. Camp 11,400 feet. Small village and gonpa.
- (13) Tongde to Zanglah, 4½ hours on a very slow-walking pony. About a mile near end of march is not rideable, where the valley closes in and the path gets on to a precipitous hillside for a time.

Camp about 11,400 feet. The village is rather a large one. The descendant of the former Bajes of Zanskar has a good house here (Zanskar is pronounced "Zalas" locally).

(14) Zangiah to Hamtsa, about 5 hours; a few miles down the main valley, then turn up a side nullah, very steep for 1,000 feet, after that much essier, and mostly rideable. Top of pass Namtse La, about 14,700 feet, 34 hours out; no mow.

Camp about 1 hour on by gradual descent 13,500 feet, plenty of willow bushes for fuel and good water. A cold place. The village.

llow bushes for fuel and good water. A sold place. The village.

Burhal are very numerous around here, but good heads scarce.

(15) Namise to Bangtse (Tahail Ladakh). Short march, difficult for ponies, in parts, but mostly easy. About 21 hours.

Camp at about 13,000 feet. Plenty of fuel. No village.

(16) Bangias to Hirak, 4 hours econing Titish La, 18,606 feet. Path upbed of right-hand branch of mulina above comp for a bit, then steep signage quitili side, creasing the ridge into lath-hand branch at about 18,000 feet. From her one sees the puts stright above. Slight desconds of the steep signage, gain the top where the next pass Singhe La supears straight above in front with a fine peak, Za of its side. Zavy descent to Sirtak, and hambet included in Guldrung village at above 12,250 feet. Good house ownsyl by an astrologer; some first-sized pound orders in parks above.

The pass is very easy one, though steep on the Bangtse side; very little mow.

(17) Mirak to Manechan, 64 hours. Straight down the hill to the rivercrossed at 10, 91 feet by a good bridge. The river here runs in a fine rooky gurge. Up the other side vary steep for 2,000 feet, cross a spur, descend, a liktle, and rise gradually to Yuldhung 12,725 feet, a fairly large village (24 hours from earny). Steep ascent of 1,025 feet, a fairly large village (24 hours from earny). Steep ascent of 1,026 feet and after that gradual to the pass (Singhe La 10,601 feet), hardly any snow on south side, but a considerable patch of steep move on the north (44 hours out).

After the snow is quitted there is a gradual descent to the camping ground, Manschan, about I hour on. This is a roomy plain with some fine hills around, plenty of brushwood for fuel. About 14,500 feet and cold at night. Baggage, on vals, took 94 hours.

(18) Mansehan to Spanginang, 44 hours. Eary going up and down over old marsine for about 2 hours until a low sput is crossed, and Ratokaar village comes in sight; path descends a little way to the village, or crosses the stream, and rise vary gradually to the pass. (Shrichir La. 16,372 feet), reached in about 4 hours from earm. Good path nowhere at all steen except this short final ridge. No snow on either ridge.

Spangthang is 1 hour further; (the usual halting place would be Hanupatts); camp about 15, 250 feet; no fuel on the spot but can be got further down the millsh.

- (10) Spangthang to Wania (Phanjila)—13, hours to Hanupetta, a poverty stricken hamlet of Wania at about 13,000 feet. Yaks can go no further and are changed here for coolies. Rather poor path to Phanjila crossing and recrossing stream by small or rather sketchy bridge. About 24 hours from Hanupetts, 11,000 feet.
- (20) Phanjila to Lamayuru passed the main village of Wania, 12 hours, a pintureaque place with gones and for on a high spur. Turn by mullah to left through Sallis (also part of Wania), then up a small ravine to west in about 1½ hours to top of the small pafs Prinkii La, 12,500 feet by Guide Book, but seems less. Ascent very gradual; final ridge fairly steep on both sides; easy decemt to Lamayura about 1 hour.
- N.B.—Native travellers are strictly searched before and after passing the sapphire mines. None used to be allowed to take over Rs. 32 without a pass from the Nath-Lahalidar of Padar.

At Lamayuru the main road to Leh is joined, see page 131, thence it is half stages.

SURU map 45 S. W. approx. 76° E. × 4° 38' N.

Sum is a collection of hamlets scattered over an area 4 miles long and a mile or so wide.

The main path north leads to Katom, along the rives. If going to led no could go by Kurtse and Sayl to Sherpol (see above page 130) for by Kines bridge to Paskyum (see above) or by Rangdum and the Kangi La Lamayum, pages 211, 213, or by Zanakar; to Kadamir the obtaic of Lamayum, pages 211, 213, or by Zanakar; to Kadamir the obtaic of the size is (a) by Kargil, (b) by Umba La (see below), (c) by Wardwan (see next pages).

To see or to climb Nun Kum mounthin cross the low spur in the bead of Sum rivet by the Parkaselik L., a magnificent view; go to Gulmago, or Rangdum, cross the Suru river where fordule (secording to easien), search the Shaft Chuh nullah and figatics. The suddown explored to 18,000 feet in 1902; he was followed by Mr. Sillem, who assended to 21,000 feet and discovered the sawey hetest the texteen the four high peaks; the mod discovered the sawey hetest between the four high peaks; the first at the east, and celled it Financel Peak. In 1914, Court Calvassended Kun Peak, the highest rock peak, over 23,000 feet. The Dome Peak or Yun, has no been attempted; its 23,410 feet.

Another dimb is from Tongul, 8 miles south of Suru; and one can choose either the Tongul mills at one a couple of miles east; both path join at the Santik La, 10,000 feet. Then one climber's route goes on a cross the Barmal glacier and pass 17,000 feet, and round cast another down the Barmal glacier to the substitution of the couple of the substitution of the Babakhol mulls, and joins the main route to Wardwan. The suther climbed D. 4 (41,000 feet).

There is a direct route from Shergel (on the main route from Leh to Suru. Map 45 N. W. and S. W.).

 Shergel to Sani, 12 miles, 8 hours.—Steady long ascent nearly 10 miles to pass 14,500 feet; easy, fit for riding; 2½ miles down to hut.

2. Signl to Gamp in Karlen Vallay—Crose stream and execute pought to the Bonalia, samp pass over 10,000 feet. Ganed niver to Nim Kinney top. After a drop of 2,000 feet choice of routes to the valley still 2,000 feet below. The left and easier descend to Barten, the vigits to Barten. The former about 14 miles or 8 hours from Repi. The letter about 20 miles or 10 hours from Sept, being 7 miles lower down the valley.

 Barse to Suru, about 17 miles or 8½ hours.—Descend valley to Kurtee, then rise about 2,000 feet over a spur and drop steeply to Suru valley. Cross to left bank by a bridge above Sanku.

Norm.—If route by Barte, then 3rd march to Sauke, 14 miles; 4th march to Suru, 10 miles.

The Suru Valley is wild and picturesque, but barren from Kargil to Sankho or Sankhu, where it opens out; and owing to a greater rainfall the hillsides are somewhat greener. Wild roses and other flowers are seen, and there is good pasturage in the higher valleys.

On one or two coossions when the bridges at Kargil have been sweptaway the traffic has been diverted 14 miles up the Suru river to a bridge at Kinor I mile below Taulia Kot; and thence descending the right bank to Tikes, S miles (passing Sartes and Zakartang), here turn up steep side to Chuskor, ascend 1,000 feet, cross side steem and ascend spur to left 1,000 feet, thence along slopes of mountain immediately overlooking the great plateau between Kargil and Paskyum to the latter place, camping near bridge above village; 17 miles from Kinor.

There is a direct route from Sanku, 2 marches south of Kargil in the Suru valley, to Dras.

- Sanku to Umba, 8 miles.— A bad road 3½ hours, fording streamhalf way.
- 2. Umba to Dras, 18 miles.—A double march. Steep ascent 3,500 feet to Umba 1s., 14,800 feet, casy descent to grassy valley, a camping-ground two or three miles on, but no supplies; then easy ascent to Lamagos Le, 1,4000 feet, overlooking the Drass Valley, to which a long gradual descent about 2½ hours. Total time. 10 hours. The path is difficult early in the summer, or after mow.
- It is described in Wilson's "Abode of Snow" as if it were an Alpine feat.

Author with ponies went from Dras to Umba, in July; it took ten hours marching with halts.

Going from Drus it is 3\frac{1}{2} hours to top of first pass, \frac{1}{2} down, 1\frac{1}{2} hours in grassy valley, \frac{1}{2} hour steep ascent, 1\frac{1}{2} hours steep discent to Umba village, allow 1 hour halts on route, total 10 hours.

#### KARGIL TO KASHMIR VIA SURU AND WARDWAN.

- Kargil to Tsalls Kot, 15 miles, 8 hours.—Take ponies through to Suru. Path very rough over moraines; supplies scanty.
- Tsalls to Kot Sanku, 10 miles, 4½ hours.—Two miles rough, rest
  of road better. Large stattered village at Sanku opposite the fertile Kurtae
  valley. Good camping ground with shade. Supplies plentiful. Path to
  Timba Lastarts west from here (see route 14, also above).
- S. Sankti to Suru, 16 miles, 2 hours.—One hour along valley, then over stony spur, with ruined castle, and atesp staiross. Then rough path by river and along face of cliff to a village, one-and-a-half hours' picturesque gorge, a bridge to opposite bank. Wide band round corner to west, then again south rather stony; get distant view of Nnn Kun. Finally 1½ hours on level with grass past scattered villages, cross a side ruilah, choice of comps. Shade at pole ground, or near the Than, total time 8 hours for coolies. Rest-house not habitable. A collection of hamlets, surplies, fowls, eggs, gil, sheep, &c. Near village is Captain Christian.

tian's grave. Engage coolies through to Suknes, to which there are two distinct routes. Take 4 days' supplies. The path is seldem fit for ponies. Route A. early summer.

 Suru to Donara, 10 miles.—Road very rough, the track carried away in places; Donar or Gyaling Kor on small plain; good camping-

ground. Fuel close by ; no supplies. Height 12,400 feet.

- 5. Denara to essip below Ebot Khof Glasfer, 10 miles, 8 hours, read turns south two miles foot draws, fort shallow steams. One mile steep assent over loe and rooks (to 14,400 feet). Bhot Khof Pass first summit 800 feets second, a mile sirrly level over deep mow, soft in places, to second summit, then very steep descent, signs on mow; at least in valley along the main places, then good path to this camp. In 705 '424'. No supplies but word. Ches the pass early in day. In 1002 Rev. C. S. Becton and the outdoor delowered that the Barmal Glasfer which ends in of one mile, and total length of 15 miles. At times there is a variation in this route descenting from the summit of the Pass to Segar Nav. § hours along to and moretise, then \(\frac{1}{2}\) hours close to camp, rejoining the other route.
- 6. Gamp to Wenneyt, 12 miles, 77 hours.—Easy descent in Bhot Khel millah, road generally good and fairly level but somewhat slight grant in places oree more (in August), then ford the river, sometimes difficult about 10th mile, as accust sometimes slightery, camp by birth forest. The fords are extrawally difficult at times, said it is usually best to cross on the snow at the glacies, and deep down the left bank. About 2 miles on it wompet, a large plateau usually coughed by gootheck; 1,1300 See is.
- 7. Wompet to Suknes, 10 miles, 7 hours.—Bough and slippery four miles through bloch forest. Grand somery turn abrupt conner. Then cross wooden bridge, rest of road fairly good. A village; seathy supplies. From here a path to Sona Sar (Lidar Valley) 12 miles ollimb (see sure 90.)
  - Boute B. Late summer, when Bhot Khol erevasses are bad.
- Suru to Sirimarg, 15 miles, 10 hours.—To Donars as above, then keep up due west. After much rough ground upland valley opens out. Camp near foot of terminal glacker. Height 13,700 feet. A branes for cooline. Fuel seastiv.
- 5. Stfmang to camp in Bhot Khol Valley, 13 miles, 10 hours.—About 600 feet up gladen and normin, hen to left steep up rooks, and again to left on easy more slope to Pass, 15,500 feet. Yurangshan Pass or K. Grighar, 76 42 °E. Shep roak descent to mornine 1,000 feet, hrannas at Khelahd and Shekakd, esty descent to Morse Khol, and finally a second steep and often slipper drop on to Komeg in the Bhol Khol. This pass is some of miles were of the Bhol Khol Pass. Hensy join Route A.
- Gamp to Suknes, 15 miles.—Two miles on right bank, enquire ford from goatherds, at times dangerous, then cross, escend to Wompet Marg, and as in first route, 7th march.

- 7. Suknes to Inshin, 18 miles, 8 hours.—Several steep ups and downs, generally downhill. Pass village Basman, broad fertile valley: supplies plentiful.
- 8. Inshin to Suknes.-Do not cross stream, but keep on right-hand side all the way to Suknes.

9. Inshin to Camp, 10 miles, 5 hours.-Very steep ascent, then better along slope; in places rocky ascents and descents. Usual camp Lutharwan some 3,500 feet above Inshin, where firewood is difficult to find. Better cross Pass and descend to Gujars' huts about 2,000 feet down. Total about 8 hours, 18 miles,

In this case next march omit Gauran and march to Nowboog, 9 miles. Coolies should be taken through from Inshin to Nowboog, or Shangas. The direct pass from Nowboog to Achibal is the better and easier.

10. Camp to Gauran, 10 miles, 5 hours.—Slight ascent over boulder and marshy land to summit of Margan Pass, 11,500 feet. Steep descent, rough road, about 2,000 feet. Then easier down valley through forest, 2 hours to Gauran first village, rather hidden by trees on left bank where

valley first widens. Supplies include potatoes and honey.

11. Gauran to Shangas, 15 miles, 6 hours.-Road level and good, 7 miles to Nowboog, large village. Plentiful supplies, then ascend to Hockins Galii. Undulating path—good usually, but slippery in wet weather, miles through forest. Shangas a big village, good camping-ground under chenars. Supplies plentiful.

12. Shangas to Khanabal, 12 miles.—One path goes via Achibal. to which there is also a direct path from Nowboog. Thence 8 miles to Islamabad, and I mile on to the rest-house and boats at Kambal (see

раде 81).

N.B.—The Bhot Khol Pass is rarely practicable for ponies, and is difficult for them. The advice of the Suru people should be followed in this point. In winter avalanches sweep the nullahs on the Wardwan side and are a danger. A few years ago the ill-fated camp of Dr. Genge was buried under an avalanche.

In the above route Suknes and Inshin are in the upper part of the beautiful Wardwan Valley. A rough path leads down the valley from Inshin to Marau, the chief village, 24 miles. The nullahs on the east used to be good ibex ground. but the intrusion of goatherds has driven away the game to less accessible, arts over the great range.

Following down the valley it is three rough marches to

Kishtwar (see below).

I have not been myself, but am told that from Maran there is a rough path on the right bank in three stages via Sarwa spur and Nanzi, joining the Kashmir road a few miles above the bridge over the Wardwan river, thence about 7 miles on to Kishtwar For the left bank see page 23

#### KISHTWAR ROTTES.

The bridle road to Kashmir is given on pages 83 85,

#### KISHTWAR TO RAMBAN-SIX STAGES.

This joins the main road from Jammu to Kashmir at Rambun, one path follows the left bank of Chenab Another crosses ridges on right bank

- Path crosses the rivers Chandra-Bhaga and Wardwan, 5 miles along the Kishmir road, then a wonds the spur opposite to Keshwan, 7 hours' quick walk.
  - 2 To Brut, 15 miles, crossing two ridges
- 3 To Doda, 15 miles, descending two hours, then cross a ridge and descend to large village, on the opposite side is a path to Chambs, viz Bhadarwah
  - 4 To Kretagrah, 10 miles, steep climb at end

tarang

5 To Rajgarh, 12 miles, long ascent and descent 6 To Rumban, 16 miles, several ascents and descents, hot and

# KISHTWAR

Most parts of the Kushtwar district are scantily populated. The mountains are steep and rooky Below 9,000 feet there are forests of pine and decodar, also calk at lower level in revers flow in deep gorges, and the paths are difficult. The plan of Kushtwar, with its many villages, and cultivated, gently modulating ground, affords a pleasing contrast to the surrounding mountain widness

The town, which possesses a post office and dispensary, avery small and disputated Formarly theore were undependent Espas of Bayput descent The inlines of these dutatots are allied to those of Chamba, but many of them are Mahumedars, and some Kashmura have settled in the large villages and inter-murned with Kashwanis There is a new road from Batota to Kashwar [86 Chamba to Kashmur see Route 10].

## CHAPTER XI

## BALTISTAN.

BALTISTAN bounds Ladakh on the west and extends for 150 miles on either acid of the Indus It is a wild distinct, with lofty mountains and deep valleys, all of which drain into the Indus Most of the villages are situated either on the Dras nver, the lower part of the Shayok, the Shagar or the Indus itself. The cheft down is Skardu, after which the whole province is often named where the Wazir Wazirat resides in the winter, and where there is a post and telegraph office. Slagar is another populous place, one march from Skardo, while Khapain is the capital of the Lower Shayok. On the north the province of Skardo is completely shut off from all communication by the mighty Mustagh Range. But with Ludakh Kashmir and Astor there is intimate connection and constant traffic

Until conquered by the Silhs under Zorawar Singh Skardo was the capital of a Muhammadan Roja whose descendants still retain the title. At one time the Skardo Rajas ruled a large territory, and even conquered Cintral. The chenar trees by Cintral Fort were planted by one of them. The Rajas of Kharmang, Khapelu, Shigar, Skardo, Randu Astor, Hunza and Nagyr, are all descended from an early Raja of Hinna, and these families inter marry. This did not prevent constant interneous warfare until the Sikh conquest.

Most of the inhalitants are of Thetan origin and speech, of Ladakh but they are a rather taller race, and have been modified physically by inter marriage with their neighbours, the Darda, and in social habits, by their adoption of Muhamma damsm. The upper classes are distinctly Aryan

They are polygamists, and for this reason the country tends to become over populated The quantity of cultivable land lunited by the possibility of irrigation. This has been most laboriously extended along precipitous hillsides, but thousands of Baltis yearly emigrate in search of work to Simla and other parts of the Himelayas. They are a sturdy, willing people, pleasant to deal with and rather independent.

They wear woollen skull cap, cost and pyjamas, with hoots of strips of untanned skin. Their heads are shaved, except at the side and back, and from under the cap straggling elf-looks fall over the neck. Some few of the higher parks, as around Dras, are partly inhabited by Dards, called Brokps or Highlanders. These site are Muhammadans and of the Shia sect, but in Shigar and Khapaku many belong to the Nur Bakhah sect. The whole populationic considerably over 80,000 persons,

The chief route to Skardo is that by the Sind Valley and Dras.

At Dras arrangements should be made for supplies, except milk, fowls and eggs which can be obtained at each stage, as also coarse of a.

The Skardo route diverges from the main Ladakh road at Kharal suspension bridge, by the junction of the Dras and Suru river.

Ninth march—Kharbu to Ofthing-thoug, 24 miles.—The new bridge is 90 yards span, Kharal 12 miles, then Gangam 34 miles. Old golddigging passed.

Gangun, a village of 20 houses, good hade and water and onlivation. Than 1 hour stony past he opposite Belango, a prestry village. Fine granite ridge above on right 2 hours on with one secont of about 200 feet, than descent to stream below filting, then 20 minutes up through hamles and fields to rest-huk. A deleaser compount mult interace might be got 5 minutes further on and below path. Water should be boiled. Time 8 hours, cooless 10 hours.

Tenth—Olithing-dianty to Bargioin, 17 miles.—The bridle road keepes high above Surn river and ascends slightly to corner above junction with Indux, 1 hour, then sleeply down 2 hour to Indus in a nearow googs, 110 yards wide, then 2 hour on to hamish Mashang, good water; this old road then ascended over cellifts, but a new road keeps low down, built up or rock-out for 2 miles. At Takeati a pleasant shady comp near river, large village, fair supplies, good water, 3 hours, sooles 4 hours.

At mile 23 from Kharal ascend 600 feet and oross a small nullah, village skirting one hour; then steep stony descent to river, \(\frac{1}{2}\) hour to village Gidiakndo, where shede, water and possible camp; at mile 28 over a rigage parri, at mile 29 village Bagieha, good shade and water

Eleventh-Bagicha to Tolti, 16 miles -- 20 minutes on to patch cultivation Bondoko, then one hour stony hot road to Kharmang, in a deep gorge last mile sandy, wretched rest-house on left bank near rone bridge. no shade, grass, nor water. All supplies are brought across the bridge (span 90 yards). The Raja's house is picturesquely situated on the right bank nearly a mile from the bridge, and across a side stream. The old eastle is ruinous. Raja Aman Ali Shah of Karmang has a wide district from the Shingo river below Dras to Parkutta, and up the Indus to-Urdas. The next nullah on the right bank is reserved for his shooting ; a path leads up it to the Ganse La, and so across to Khapslu ; it is 2 dayshard going (see page 165). From Kharmang, a mile to a corner where Indus breaks through a rocky gorge; formorly a great moraine, probably from Ganse nullah, must have blocked the river here. There are fiercerapids. The path turns west for I hour to Mahri Do Villago; then again bends N.-W., again cultivation; then long stony bends, with one ascent... and again to left and down to Tolti. A small rest-house : or 1 mile further a good camping-ground by the pole ground, 45 miles from Kharla. It is pretty village, but in the winter never sees the sun.

Twelfth—Tott to Parkutta, 18 miles, 5 hours, coolies 6 hours.—As first some cultivation, then a short bare strotch, then the fertile fields of Kamango, gradually ascending, note the great curatio boulders of the former glacial opoches. Six miles from Totti pass under a great cliff, turn weet, and after 2 miles more resont a series of hamlets Ghort, Shordock, cross a small fiver by a bridge 7 mile up, or ford, then villages Mantaka, Rasan. The fertile fields stretch for 3 miles. Then turn north at mile 66 along a small parri, soon reach cultivation, thence ½ hour on to Parkutta village, and reat-house on a rock 58 miles from Kharal.

Thirteenth—Parkutta to Gel, 14 miles, 5 hours, coolies 6 hours—12 hours through cultivation, then 3 hour modulating reach fine village Sirmik, 20 minutes to small side stream; then turn more north through "lilage, pass mite 65, at mile 66 a short recky parti, and a sharp bend of the river in a water-worm gorge; path seaffolded and built up under cliffs. At 10 miles to a Perkutta a sterry crosses to right bank of Shayok confinence, below Kiris, which is seem as a fine stretch of rich cultivation for some miles up that welley. For Gol one keeps on round a corner for 2 hours to Gol village and rest-house; ½ mile further is a better camp near a side stream with a good spring.

Fourteenth.—Gol to Skardu, 21 miles, coolies D hours, pay 6 annas—1 stages—4 second a little beyond the village, then story and bars, 24 hours to opposite Narh; 4 hour to bend of river; well built up path, 1 hour to to cultivation and trees. Togona, 5 miles from Skardu; ploesant walking with shady places, mendows, fields and extensive views, 24 hours-valley opens out; finally ascend from grossy flat to plateau, pass the Skanbu Takali on right, then comes the rest-house.

Near by is post office, telegraph, dispensary, etc., a little below is the barracks; and just beyond at the foot of a great trap hill is the picturesque polo ground. The Raja's house is to the south a little higher, and a bazar. There are several camping grounds, but none very good. Water abundant and

good, also supplies. English stores, etc

The Singar river joins the Indus opposite Skardu Height about 7,800 feet. The clurate is cold in winter, but the snow fall less than in Kashmir. The Indus rarely freeze here. In summer it is very hot. At the end of Angust the shade temperature still reaches 80°, but the nights are cool. The fruit (grapes, apprects melons, etc.) is debicous.

The Indus Valley below the Skardu plain again contracts into a narrow prequitous gurge, between the rocky walls of which the now large river is churned into form as, in a sense of rands, it descends the steep part of its course to its great

bend southwards

There is searcely a path even for men on either bank. There are but few villages and these are attracted high up the mountain side on which high level deposits hie those above Skardu give evidence of the height to which the valley has been at times blocked and water accommodate.

Rondu is 5 manohes down Dr Rudduok, who gave the route, says "Path generally bad, sometimes in bed of river, sometimes as much as 2,000 feet above it Pomes not being trained to chimb are not available for baggage The path be wond Mendi to Maramosh is still rougher."

Major Napier BA writes that this refers to some years ago, and since then the path has been somewhat improved

but there are still some bad places

A bridle path is being gradually brought up the right bank of the Indus from the Gilgit to Haramosh Path difficult

There is now a ligher path by which pomes can go to Steriko beyond Mendi

- 1 Skardu to Kumara, 6 hours—Two miles below Skardu cross Indus by ferry bost and follow down right bank
- 2 Kumars to San, 5 hours—Easy path for half way, then leave the open valley, and slopes are rough
  - 3 San to Toongus, 44 hours -A rough march
- 4 Toongus to Dasu, 5 hours—At Bagioha usual to change coolies, then steep arount of 2 350 feet then descent of 800 feet to village

 Dasu to Mandi, 5 hours.—Gradual rough descent to Indus. Cross by a high rope bridge, the ladder approach, one of the worst bridges in the Himalays, then about a mile to village, which is the capital of Rondu.

### DEOSAI ROUTE TO SKARDU.\*

This is by far the best route between July 15th and September 15th. It is sometimes open and later.

Those who intend to travel this way must make arrangements for their own supplies, and transport from Bandipura (vide Rules for Visitors).

The early marches are by the Gilgit road (see page 168) as far as Burzil, 5 marches from Bandipura; or the lightly laden traveller may take the route via Wangat and Tilel (see page 102).

From Purana Tilel it is one march of 7 hours to Sonawin where the Gilgit route is joined creesing a pass with steep ascent and rather easier descent of about 3,000 feet. There is also a path from Sonamary to Tilel (see route 23).

The Deosai route is across an uninhabited plateau, so provisions and also some dry firewood should be taken.

Burgi to Gamp Chandatui, Shours, excluding halis.—(Ponles). Ascertion Burgii Chauki 450 feet north-east to Wamb; them more rooky, steady, only ascent 1,000 feet to pass, 12,800 feet hir Panzil or Stalepi La; turn north one mile, slight descent north-east to Chota Decad, open grassy valley, orces stream to left, 3 hours leave valley, which turns scott-east (here path to Saingo), ascend north-east, steady over stones and boulders; then steeper to summit Sari Sungar Pass, height 14,200 feet; down to shallow lake, then another on right view over plateau with rolling hills. Gradual descent to grassy valley? 2 miles on to Camp Sakebanha, 7 hours marching, then 13 on fint to sheliers as Chandakut, height 18,200 feet. In wet weather, or if much old snow, this would be too much for one day, the streams purify frozen. From here is a path west over easy pass 12 miles to the Glift too.

Chandakut All to Malik Mar, 74 hours, excluding halts.—One and three quarter hours to Krubin Ab shelter, cross stream, one hour ascent to stony plateau (height 13,500 feet). Here a view round complete circle of anow peaks. All these rounded hills are old moraines.

Down to and cross larger stream Bodab, 1½ hours; then 1½ hours to another stream. Marmots abound in parts of the plain.

Two hours slightly ascending and crossing another stream to camp as north-east corner of the plain close to side valley. A path to Skardu across

<sup>\*</sup> For Deogai Route to Dras see p. 233.

endge opposite, two marches, a soniptured stone with Buddhist insurption at one place in the Satzar nullah. If making shorter marches, 1st Camp, Sekbachan, 2nd Bodab, 3rd Ah Mahk Mar

All Malt Mark Dandsal (Camp), 74 hours, evaluating hales Gradual easy ascent to greatly valley, to north for \$1 hours, then one male of steep alopes into a rough stony valley east, then 600 feet up many steep alope to top of Burn Le. 15,900 feet, 5 hours from easy. Magnificant mountain view of the gunna of the Martagh, with a glumpe of the Singer or-chards \$0,000 feet below A descent over enow for 500 feet, then routs. Logo feet to Word: Hader sheller wells, then one hour steep down ravine to large spring, peared cofar brakes, one but Total descent \$2\text{ hours Hearth of same 11,400 feet.}

Pindohal to Skardu, 5 hours—Steep descent in gloomy gorge, 31 hours, then emerge suddenly, 3 hour to miss Karpato, on edge of Skardu plun. One and a half hours sut by nazrow aronne of willows and poplars, then stoay mardus, cross a steem to first of straggling hamlets of Skardu, pass pole ground and post office to test-house.

The other path from Ah Muhk leads in from Satpura zavine, and is easier and pleasanter, 8 9 hours, supplies available, Satpura to Skardu 6 hours

It is difficult to follow the above description in reverse order, so I give the following details —

### SKARDU VIA DEOSAI TO BURZIL ROAD.

Shardu to Wozul Hadar, 7½ hours, 14 miles —1½ hours to Kurpito at foot of revine, then 4½ hours steady ascent, at 3½ hours pass Pindobel shelters, where abundant wood and a fine spring, no wood up at camp

Worst Hafar to Worst Ab or Laipan 9 hours, 18 miles —Assead 24 hours, the last 500 feet steeper and commontly trouble with mowbeds over peas and down nigrage 3 hour, them gradual descent 14 hours to All Mahk Mar, 44 hours on to camp at Worst Ab (red water) Thus is the first of three chief forcis, dwarf borch fuel

Would Ab to Subbalam, 44 hours, 10 miles —General directions B W of munites to large stream Rod Ab (ing water) fored, gardanily your as stony plateau Shamoskuth, then down to Kalapam or Kraim Ab (bland-kut, stons shadters no finel, ‡ hours to Subbalam, 1,‡ hours to Subbalam, there are equally good camping grounds for the next two miles on a

Schhodmi to Burni, 65 hours, 13 males—Blughi ourve 8 S W, then gradual ascent W 25 hums to Sara Bangar lakes, and pass, bondiers in places, then steep dewn S W to Chota Deceas, very little fuel here, erces steems, keep S W 15 hours, easy grassy valley to Mrr Panul Pass, then stony, 2 hour and steep descent, 1 hour to Burni rest house and man rest. Before the Decsai snows are sufficiently melted, a traveller may cross the Burzil and get to Skardu by Chilam and the Chota Decsai, or by the Alampi La. The latter route follows the Gilgit road to Gudhai, and then diverges to the east

- 1 Gudhar to Buhm, about 9 hours, (Cooles)—Steeply up Dichel nullah, then over shoulder down to grassy valley Essy going partly, through pine forest for many miles, a village, cross an unbridged stream village, a mile on, Camp
- 2 Buhn to Camp (West of Pass), about 10 hours About 2 miles up cross a side ravine, then 2 paths, lower goes south sast to Doesan, upper winds gradually up over grassy shoulder Turn left into side valley, by streams a camping ground, follow up stream 3 miles, stony ground, camp 13,000 feet at foot of pass in amphithestre of steep anon indger
- 3 Camp (Alampi La) to Thissing Spang Huts—13 hours—Steep path and much snow then level 2 mile, then over rounded alopes, then level, then final very steep snow ascent, note book says 60° This must be a matsake, probably 45° cooles suffered from height. Summit 4 hours from Camp Alampi La, height 16,500 feet. Then very long steep snow descent, at foot level, then rocks, to a camp descent 22 hours. Then about 55 hours down rocky valley to goatherds huts.
- 4 Huts to Kaisura, 13 hous—Gradual descent 6 miles to rullage Singthang then cross rever to left, 5 miles fist or really to village, and meadows a hours Below thus bradges over river, gone, so duren upon spurs to left rootly morance with steep ascent suramble along top prenpose and down 44 hours to meadows then a labelet striking scenery stependous cliefs and peals one hour to Camp in Kaisura whence fine view west to Shardu. Thus is slarge village with supplies above left bank of Indus.
- 5 Katsura to Skardu, 12 hours—Soon descent past huge rooks of morame to the level green where unguted elsewhere a sandy desert A village cause midway and another further on

### DIRECT ROUTE SKARDU TO ASTOR.

From Shardu two marches to Shigathang, thense-

3 Shigathang to Ordokas, 12 miles

For several miles easy, then a steep ascent, and rock; to height 13,000 feet, no fuel

Ordokas to Chumik, 9 miles — Four miles ascent chiefly on snow and steep to Bank Pass, 16 000 feet In late summer crovasses appear cross undulating summet, then steep descent 5 miles, 4,500 feet to Chumik where wood is procurable

Chumik to Thingsh, 134 miles —Six miles gradual descent on right bank to Herpo nullah, then 17 miles to wooded plam, easy for 2 miles then rougher to Gutumsrr village, 2 miles, on to next village Thingsh. 8.000 feet

Thingeh to Astor, 14 miles -For 7 miles easy path through many hamlets, rough for one mile, better for 2 miles, then steep descent , cross Astor river and ascend to Fort , thence across ravine and on to bungalow.

#### ASTOR TO RANDU.

These are sportmen's routes and often difficult

1 Aster to Thingel, 14 miles - (See above)

Thingeh to Camp, 0 miles -At 7 miles leave main nullah and turn north, camp at about 12,000 feet A steep ascent

3 Camp to camp, 12 miles - 1 steep ascent to 10.800 feet, cross glacier, descend to stone shelters, mainly snow, then rocky

4 Camp to Mendi 18 miles - A long rough maich, pass several villages, steep descent to Indus

Another route is as follows (Wingate) -

- Mendy (Shot) to Balamik, 12 miles Pair path, 6 or 8 hours, riding 2 Balamik to Baltal, 10 hours - A village is passed 2 hours below
- Camp Balfal to Thingeh, 8 hours -Cross pass, easy except last, one hour of ascent, ascend to Thungch

4 Thingeh to Astor -(See above) NORTH OF SKARDU.

The routes north of Skardu lead by either the Shigar or the Shyok Valleys

Skardu to Shigar, 6 hours -Above SI ardu, 12 miles, is a ferry over the Indus, here called Attock Durya, after crossing, the path follows up the right bank, 11 hours along sand, plain there is division of paths.

That to right leads to Khapalu via Norh Now turn left up small ravine, cross a stony plateau, then down to Shigar valley, soon reach cultivation, then 11 hours level, mostly shady, passing many hamlets to polo ground, where is a rest-house There is an alternative route from the ferry going round west of the hill and following up the left bank of the Shigar river 5 hours, mostly soft sand, then 11 hours among fields and avenues to Shear If skin raft is procurable at Skardu a long detour to the ferry can be avoided (Shigar, 1910)

Shigar is a widespread group of beautiful villages The Rais lives in a mansion at foot of old castle rock. The fruit of Shigar is famous, also its pole The old mosques and tombs of the Rajas are interesting Supplies can be got through the Thanadar The climate is cooler than that of Skardu

Shigar to Akosle lower route (Walquir, 1910) 1 Shigar to Yune, about 20 miles - Easy going for much of way, avenues, willow trees, afterwards stony, sandy plain In summer ford

some amall streams

2 Yuno to Koshuma, opposite Dassa, about 12 miles —Stony and sandy plane, near Wungo necessary to chinb and follow canal in summer when river high Cross to Dassu by akin raft, this needs to be arranged beforehend by order of Taheildar of Skardu, who will send from Gulebpur-

3. Koshuma to Chokpa, about 10 miles,-A very difficult merch to the rope bridge below Biano; better path on right bank, viz Dassu. Path

on left bank ascends 1,500 feet, some very narrow ledges.

4. Chokpa (Chokplong in map) to Askole, about 16 miles, -A rough. stony march, start early to get across a stream about 14 hours out and two streams of liquid mud 21 and 4 hours respectively from Chokpa. These are a more trickle nearly in day, but cannot be crossed late.

At Pakere (Hote on map) a rope bridge to left bank of Brahlde, and

recross at Chongpo to right bank.

Shigar to Baltoro and Mulhagh Pass (by Mr. Ferber).

1. Up Shigar Valley to Heshu, 11 hours, then ascend nullsh to right, cross streams constantly, two steep ascents, coolies took 9 hours to camp near head of nullah; but better to camp 3,000 feet higher above steep grass slope, before snow. A heavy day's work.

2. Camp to Askele, 101 hours .- Ascend 1,500 feet up steep snow and rooks, 2 hours, to summit Skoro La 17,000 feet. On the north side is a glacier filled valley. Snow for three hours, descend past some hamlets to Thal Brock, 64 hours from top. Here steep drop to Braldo Valley, fine view. Two hours to rope bridge below Askole.

It is easier to make three marches, the second camp being at Thal. Brock : and also better to go to Askole by the lower route, and return by the

Skoro La (WRIGHT).

3. Askele to Bardomal.—In favourable conditions, when Domordo Lungma can be forded, can be done in 9 hours. Otherwise a long detour up to bridge : camping at Korofon between the Biato glacier and Domordo

stream; second day 6 hours.

4. Bardomal to Ortokas, 9 miles.—Ascend Baltoro glacier. Mr. Montagnier built a cairn 6 feet high near foot of this glacier 200 yards to the north-west. The bearings then (June 1903) were 173'5° to foot of glacier, cross glacier to left bank, reach Liligo 3 hours, follow bank over boulders, small lake and Chober Zeohen 3 hours, then again on glacier, cross two side moraines to Ortokas 3 hours, a green slope, good camp. Take wood on from here.

5. Cross glacier to right bank, 4 hours, Mustagh Lunka at corner of Conway's Piale glacier. Ascend Mustagh Lungma on glacier, 11 hours to-Mustagh Spangla, grassy slope on left bank, keep along this 11 hours to upper edge, Lobsana Blangra. All these times are with coolies, and ex-

oluding halts.

6. Follow Glacier, 3-4 hours, to foot of Pass.—The ascent is somewhat difficult, took 3 hours, would be less if guide knew the way, height 18,400 feet. The descent on north to Chang-Tong offers no special difficulties.

Fifty years ago local men took ponies over this pass. It then got blooked by glaciers. Captain (now Sir Francis) Younghusband traversed it many years ago, returning from Pamirs.

Returning from Askole via lower route, very narrow in places and sometimes blocked by mud avalanches.

1. To Pakore, 31 hours.

2. To Hu, 5 hours.

3. To Dassu, 51 hours.

5. Simm, 6 hours, thesee by skin raft to Shigar or Skardu, see day, Askole is a world's end, surrounded by vertiable glacial seas. East is the Baltoro glaciar, the longest except Stachon out of the Arctic regions. Conway's party followed it up in July 1891, and ascended a lotty peak, Phoneer Peak (23,000 feet), at its head between Mount Gusherbrum and the great K. 2" which is 28,200 feet high. Eckenstein recommitted K. 2 in 1902 and camped on its glacier at 19,000 feet for over a month. He has given the name Chigoro for K. 2.

In 1909, the Duke of the Abruzi with a well-equipped Italian party explored round K. 2 and climbed Bride Peak to a height of 24,600 feet. Dr. de Ellippi has written an interesting

book about the expedition.

Some very fine ibex have been shot on the hills above the Baltoro glucier. The last good camp is with fuel at Rodkass, 13,900 feet.

There is little hope of any mountaineer ascending K. 2,

which is too steep and loy.

North-east from Askole is the huge Biafo glacier linked by ast snowfield at its summit with the Hispar glacier. Conway's party traversed this in crossing from Nagyr. They had fine weather, and being early in the season the snow was still in good condition. Since then Dr. and Mrs. Workman have mapped both glaciers.

A large party of Nagyr raiders lost their way on this glacier

fifty years ago and perished.

The west branch of the Shigar nullah is the Basha. The route up is on either bank. If right bank, cross by skin raft, then 6 hours to Gulabpore.

If left bank.—

 Into Bank,—

 Shigar to Kashomal, 6 hours.—Fairly level and good, but latter part stony in places. One-and-s-half hour to Hashu, then 1½ to Alchori, land 1½ to Tkildi, 1 to Kashomal Kotar Gan, a fine peak, behind camp,

elimbed by Dr. and Mrs. Bullock Workman in 1900.

2. Kashman it o Churtum, 8 hours.—Sall in wide valley, where the two rivers join. One-and-a-quarter hour to Yuno; here bridge crossing the Braikin; then across a fast story plan 2 hour; then another bridge over Beahs river and valls to Tisser 2 hour; prestly valae-fall high up of left. Opposite is the gorge of Braikin twire and a sticking Lingan point on ridge, revenued by both Hindu and Mohammedans. Then 14 hours up Beahs Valley, at sixts easy and pretry, then over sand and astones to

adventures.

Chutrun where is a disused rest-house. Much white marble here. Chutrun means hot water, so called from the copious spring, temperature 110° Fahr., which rises here. There are bathing tanks much used by the sick from all parts of the country.

- 4. Doke to Arando, 4½ houra.—Along slopes, some up and down 2½ hours, turn corner to left, valley widens, stony beys and outsivated fan, 1 hour beyond where 1 hut, thence 1 hour to Arando, across stony plain, then sandy plain, crossing streams. Coolies took 64 hours.

Arando is the last village, and has 50 or 60 families. The dirty snout of huge Chogo Longma Gan (glacier) ends half a mile west here. Thor Gan almost overhangs village to south. Both these glaciers advanced for some years but have lately needed. Heighb 9,800 feet.

Dr. and Mrs. Workman explored the head of the glacier and ascended to over 23,000 feet. They have also explored the Hispaz glacier and published a book entitled "The Call of the Hispaz," describing their

North is the Kiro nullah, up which the route was formerly to Nushik

- To Domak, 6 hours.—The marohes are briefly: rough narrow path cross Chogo Longma 2 hours. All Beg Brensa 2 hour, Harimach (a good eamplag-ground) 25 hours, up moraine and over side glacier 1 hour, grassy eamp with hirth trees. Domak, height 11,500 feet; stone huts.
- 2. To Katche Bransa, 4 hours.— Along gressy slopes, 50 minutes to level meadow called Shaghran (polo ground), pas junction of Hachus Albhord Gan with Kiro Gan (galecir) 14 hours. Crassy hollow at side of moraine; wood and water; Tsavwacha, rest; then 14 hours to camp, following side moraine and crossing glacter. Height 14,000 feet; no fuel beyond here.
- 3. To Silatiu Branss, 4½ hours.—Cross to middle glacier and up central moraine I hour, another hour up and across north to Ding Branss at foot of spm, up spm ½ hour; down to side glacier, north-west cross glacier (bad crownasse) to next spun; two hours Shatbu, very steep, tiny platform for emping. Height 64,000 feet.
- 4. Stinibu to Gale-long Brans, 1½ hours.—One hour up very easy surviley to Nushik Col., whence view over to Hunza Mountains; rectrace one hundred yards, then east up steep snow to big rocks. Here a good shelter under rock 16,800 feet, 20 feet above this the cornice can be tunnelled in 1 hour, type; beyond is steep ice slope traverse cutting in 1 hour; then descend to easy znow slope 500 feet. Bewer of avalanches.

Further progress depends on snow bridges. Mid-Juno is tho best time. Zurbriggen early July found only one. Author found in Soptember bridgelses carrasses 10 to 40 feet wide. It snow bridges, descend 12 hours to side glacies, cross roped to Haigutum or Hai Kuru, on left of Hisper glacier 13 hours, thence for Diffusp 15 day.

Note.—Take supplies from Arando and fuel from Katelie Bransa. Do not stop at Stirbu, push on to Garfo-long Branca: do not take laden coolies on till successfully explored down to glacier; return to canup; take coolies next day.

In returning, march (1) to Tsauwachu 5 hours; (2) to Arando 5 hours; (3) to Chutrun 7 hours; (4) to Galabpore 5 hours; by skin raft to Shigar 9 hours, including halts and portage.

Chutrun to Randu via the Gando La (by Lt. F. G. Moore, 6th Jats).

A useful sportsmen's route, not open before June.

 Chutran to Camp.—Coolio (two T hours.—Half hour accord crowing the torrent brice, then up steep, on conth, to ridge 3,300 feet above Chutrun, drop 300 feet to skephedd' hals, then up 800 feet to a small meadow with buts. Camp at near end 12,100 feet; fuel abundant and cood with.

- 2. Gamp 10 Harimal, 8 hours.—Half hour eavy on snow, then steep on grassy spire, then 800 feel up snow to top of Canto La 14,000 feet, very steep, step-entling necessary. Descent eavy but steep to some lusts on meadow 12,300 feet. From here a fairly good path down nullah to Harimal 10,000 feet in the broad Turnitk Valley.
- 3. Harimal to Dusu, 3 hours.—Easy down valley, here join Indus route. The above is not fit for laden animals.

Pachora. (See route by Captain Archdale, R. II. A.).

Stak to Harimal.—Cross glacier.

1. Stak to Camp.—13 miles, 8 hours.

- Camp cross Stak Pars to Nurisrin or Nussaiu, ascend 3,000 feet, 5 hours, then 3 hours down to Turmik river.
  - 3. Short march to Harimal, 9 miles.

#### KHAPALU AND THE SHAYOK.

Khapalu is the capital of the Lower Shayok. There are three chief roads practicable for laden ponies. One from Skardu following the right bank of the river; one from Shigar across the Thalle Le, and one from Ladakh by the Chorbat Pass.

Skardu to Khapalu, 5 marches-

One route is by left bank Indus to Gol, 21 miles (see above, page 154); Gol to Kirls cross rivers by skin raft at confluence, about 8 miles. Three hours. Or by right bank as follows:—

- Skardu to Nath, 12 miles.—Cross Indus, as in route to Shigar (see page 169). Follow up right bank, sandy plains, and further on rather rougher.
- Nath to Kiris, 14 miles.—Cross some side nullahe; leave Indus; a raft ferry here connects with road to Dras. Kirit is a group of fertile large villages, with a Raja. There is a rest-house.
- Kiris te Kuru, 10 miles.—Half hour through fields, then 1 hour sand and stony to Gohu village, 1 hour up, then down stony road, 2 hour along foot of cliff, Kuru, a large village and rost-house. Time, solf 4hours, coolies 5 hours.
- 4. Kuru to Doghani, 10 miles.—Ascent to 1,500 feet above river then cross plateau steep wild descent. Kunis 2½ hours, no good water; 1 hour sandy to rocky corner, bad boulders ½ hour, then again sand, 1 hour to Balghar, ½ grass and fields to Doghani, distance 10 miles. Time, salf 5 hours, cooles 6½ hours.

Rough in places. At Doghani, valley opens out, beautiful cultivation, Khapalu visible.

The road from Thalle Pass joins here.

5. Doghani to Khapalu, 9 miles, 6½ hours.—1½ hours in pretty cultivation, partly in arenues, then two hours on sand or stony paths. Cross-river by skin raft below Khapalu; great dolay for coolles as a akin raft takes one hour for each trip and carries few men at a time.

This is a charming march in July when apricots are ripe.

One hour through hamlets up slope to parao, height above river 700 feet, above sea 9,000 feet.

Khapalu is a group of hamlets, with 5,000 inhabitants, on a long slope shaped like an amphitheatre. The Raja's mansion above it to west, with polo ground near.

The scenery most striking. A little above to north is the Hushe-Saltoro nullah, with group of extraordinary peaks. The only path as yet discovered over the Mustagh ranges at the end of the valloys is the Saltoro.

## SHIGAR TO KHAPALU, FOUR MARCHES.

There is a lower road as from Skardu, first stage, to Narh.

Narh to Shigar (by Major Napier, R. A.), 13 miles.—This is useful to travellers from Kashmir, who can cross the Indus by skin raft about 7 miles below Gol. Then 1½ miles down bank, then turn to right up small mullsh, through a village steep at first then easier but rough, cross a small column and drop down to direct path from Skardu to Shigar where it crosses a saddle, descend to valley, then 4 miles to polo-ground.

The upper road to Khapalu is nearer and better when not blocked by snow, especially for pack animals, as there is grazing.

The author traversed it in 1895.

- Shigar to Camp, 9 hours.—A steady ascent, 14 hours up right bank of aide millsh, than left bank one hour, then easier for two hours to Banks Harel shelter hat, 9,150 feet, at junction of two mullshay left is to Trasserpo Pasa, and rejous this roate next march; right up is Yaltas, Karapar int, one hour, me say gramy slopes, with pencil edears, who hours beyond it a hut, height 13,500 feet, splendid say cillis above on south.
- 2. Gamp to Kasurmik, 10½ hours.—Cross Thalls- La. A gradual easy ascent on gress slopes, ½ hours to top, 18,000 fast; splendid mountain scenary, amore sometimes in August; 1½ hours' descent to shelter huts; coolies took two hours more. Below this one hour, multh' from Insersop Pars joins on west, and the path turns south-east, one hour cross to left bank, here habitations; 1½ hours Kasurmik, height 18,000 feet.
- 8. Kesurnik to Doghani, 4½ hours.—One hour pass Daltiri on opposite or (right), height I,000 feet; hall hour to Baltoro, 4 hour Yarkor, earce to right benti, karge village, swo hours again on left benik, pass hirne villages, reach mouth of ravine, turn left to Doghani. Coolies took 62 hours; samplies; here join route from Skardy, see als page.

Another path leads down from the Thalle La to Kuru passing Olmo-ik (hut), Kasurmik, Barungus and Bragar.

Khapalu to Kharmang via Gauss La.—'This is a difficult sportsman' route, only suitable from July 10 to October 15.

- To Camp, 24 hours.—Path up nullah behind village; steep in place, camp near grazing ground; no wood, only fuel sowdung.
- 2. Gamp to Camp over Pers.—Cooline 13 hours ; the peak soon loose itself, and way is very steep in places over boulders up last back on loose itself, and way is very steep in places over boulders up last back or middle. When these nalishes must take centre one, direction shown by stock catras. Steep rooks secont, turning to right up mallah, again up stocks and patches of snow, then loose boulders to top of Pass, marked by outra, and patches of snow, then loose boulders to top of Pass, marked by outra, being the place of the person of the pers

3. Camp to Kharmang, 5 hours.—Fair path all the way. About 4 hours to a small lake in nullah, here is a camping ground and cultivation but no villages, path seafolding on left of lake. Then turn to left over rooky spur. Then descend to first of hambets of Kharmang; another mile to rope bridge. If going from Kharmang to Khapnah carry fuel to higher camp. Better make 2 camps ascending, then cross Pass and down to Khapnah. Crokes by Captain Maud, R. B.).

Longstaff and Singsby crossed from Kharmang to Khapalu early in

June, over 3,000 feet snow; soolies deserted so they carried own loads.

Khapalu to Saltoro.—North of Khapalu are great glacial valleys which attact sportsmen and climbers. From the plateau above Khapalu magnificent snow peaks come in sight.

Khapalu to Hashe.—In winter and spring there are temporary bridges over the Shayok. After early May skin rafts are needed. One ferry is below Khapalu. The path then leads high over a parri on right bank to the Hushe nullah; another ferry is east of Sirmu.

In summer a skin raft can be used from Khapalu to Doghani if river high.

1. Khapalu to Gouriss.— I hour up to cultivated plateau; 2 miles across, from cast edge view of Masherbrum, and the Saltoro spires. Half hour descent steep aandy to Yungchung; 2 miles on fat grassy to Strau, rich cultivation; 1 mile on to mft, short crossing; then 1½ hours stony N. W. to hamlets; total 12 miles; self 7 hours, coohes 10 hours; usual delay at terry. Gourtee is a group of small hamlet extending for some miles up the flat valley, up which leads the Hushe path. Two days to Masherbrum. I do not know about the forder which must be difficult in summer.

 Gourtse to Parao, 9 miles.—Ascend zigzag, 1,200 feet cross low ridge. Wonderful sheer granite cliffs and spires on opposite side, irrer gradual, winding descent to east. Coolies 4 hours, large village, well earred mosque; camp beyond and above village by side stream.

Farao to Mandi, 12 miles.—Two hours on stony flat to Dumsamu at pinenton of Kondus and Saltoro. A bridge and some noteworthy anoient Buddhis role drawings; then 3 hours steady up hill stony, in gorge, at Mandi it opens out, some cultivation; total self 5 hours, ocolies 8 hours, height 10,800 feet.

 Mandl to Goma, 6 miles.—Half stage, almost level, and chiefly through cultivation, cross and recross the river. This is last village.

Coolies 31 hours.

5. Goma to Ghiaru, 3 hours.—Cross both streams (bridge) then up right bank of Bilaphond, pass 3 glaciers, above third a wide level valley with groves of willows, flowers and clear streams. Lovely camp 1 mile below amout of main glacier.

From Ghiarn the Saltore Pess can be crossed on Srd day camping at Narm (coolies 8 hours). All Branss (8 hours); cross pass 29 hours snow field and glacier for 3 hours to the Terim Sia-Chen glacier; and 2 marches down to the head of the Nubre Valley, but this is impassable owing to the unfordable inver from April to mid-Seytember (see page 140). Up the Kundus Valley to Khorkium hot springs is one long march. This is described by Baltis as a fine place. Dr. and Mrs. Bullock Workman after exploring the Sachen glasier made a new pass returning to Kundus, Mountain scenery magnificant.

#### KHAPALU TO LEH

 Khapalu to Dau, 14 miles, 61 hours.—Gradual ascent, 1,000 feet to plateau, half hour across it. then along hillside fair path to Lanka. Sirmu is left far below. Lungare must be carried by coolie.

The plateau is covered with old moraine; and on the north are lacustrine deposits. Chikar are plentiful.

- 2. Dan to Payan, 10 miles, 5 hours.—Towering cilifa both sides. Then up part (330 feet), well eachloided path over anuly stretch to Dan Sona valley widers; one hour to large village Rhas; one there of the large village Rhasia, I j days; 1 j hours to another well built out path round face of part; 3 hours to village Payan (in map Paxiba).
- Payan to Camp (Chunga), 12 miles, 7 hours.—At Payan there is a fortified rock with a small mosque on it. A road keeps up left bank of Shayok. It would be a 9 days' journey to Khartsar; three more to Leh. (See route 20).

The summer route turns south up defile, two hours' sleep ascent up nerrow ravine, crossing half-way up to right bank; half an hour patch of outlivation; I hour moon fields, II hour cross bridge and ascend, I hour to Zyingstan; summer buts and fields; then easy grassy valley; 1½ hours to Chunga sholter huts, height 14,500 feet.

- A. Camp to Manu, 10 miles, 31 hours.— Up greavy valley, 13 hours to less that; then turn up aloge to their, stepers exceed of 1,000 to top of Chorbet Pees, 10,700 feet, 3 hours. This pass is passable for penies for three months, and passable by yals for six or seven months. There was a good deal of snow early in Reptember 1995. December arther steep for, 14 hours to greavy valley with summer latts. Then more level ground hour; then 1 hour steep faces to collivation, tenning to right; 2 hours down to Hann Gongma, where there are three vallages and supplies. This district is 20 doith. Height 11,000 feet.
- Hanu to Skirbishan, 17 milea.—One hour to Lower Hanu, 11 hours more on left bank to Indus river; keep up right bank of Indus. Stony path, up and down very hot.
- Skirbichau to Khalaise, 15 miles.—Barren and stony path, one village about 6 miles on. No drinking water on road. At Khalaise join Srinagar-Leh road, thence 44 marches.

### KHAPALU TO KASHMIR.

- 1. Route by Skardu and Doosai. (See pages 150, 164).
- 2. Route by Kiris and Kharmang. (See pages 154, 163).
- 3. Route by Chorbat and Khalatse. (See above).
- 4. Route as follows :-
  - (a) Hanu to Dah, 7 hours.—Two-and-s-half hours to Indus, turn down right bank, 1½ hours to Kanyutse, 1½ hours to Pindor, 1½ hours to Dah on plateau; supplies; coolles; a little up and down.
  - (6) Dah te Sanafas, 44 houra.—Descend 200 feet, cross ravine, gradually ascend 500 feet, narrow path in oliff down and on -to Garken, 2 hours. Here is a rope bridge. Continue on right bank; 24 hours up and down, rough in places, to Sanatae, long descent, and cross Indue by wooden bridge 12 paces span to camp. Village a little way off, Sanatae village is a large one with hundred of little tarreced fields. The path on right bank continues one mile to Urdus from which it is two marches to Kharmang, a path used for points. Probably the reason the traffic to Skarda goes by Chorbat is that there is such abundant grass for two marches, but in the Indus Valley no grazing or ponies for yaks.
  - (e) Sansits to Llainu, 7½ hours.—Path ascende § hour to small village (Sanacha or Sanatse); then one hour gradually up and round spur into side nather; 4 hour gradual descent. Half hour ascent up nullai to cultivation, 1½ hours to above village of Takimo, 2000 feet shore Indus. Three hours up a shallow valley to Llainu. Here emerge suddenly on a broad, rolling plain, with rounded hills, Llainu or Llainugma "Velley of Gods." Twenty or thirty houses, height 2,500 feet. A path leads outh in eight hours acros Bul Pess. 12,400 feet, to Lotsum on main road, half way between Maulba Chamba and Kargvil.
- (d) Malum to Kargyi, 6½ hours.—Gradual ascent, 1,000 feet, 2 hour to Humbuting Pass on west. Wide view. One hour gentle descent to first inte of Baints; thence almost containous cultivation 1½ hours to village Soul; still 1½ hours down to opposite the great story platean over which Ladakh road passes; still keep round slopes to right one hour, then cross bridge, 3 hour, join main road, cross Buru river, and turn ½ mile to left to Kargyi rest-house, thence to Srinagar by main road or by Suru.

## ASTOR AND GILGIT.

There is a road direct from Srinagar, via Sumbal to Bandipura as mentioned on page 104. Most of the tenfic beyond Bandapara is in connection with the Supply and Transport Corps of the Indian Army. Unofficial travellors must arrange their own transport, sending word at least a week beforehand to the Naib-Tuhskidar. Political Agent's perusission necessary for Gilleit or beyond Kamit Pass.

From the Partab Kadal (1st bridge) at it it miles to Shadipur, 164 to Sambal, 234 to thota Sadrkot, 314 to Bandipura. Telegraph Office. The Bandipura it is mile down to left. Special care is needed about dranking water for those in boats at Bandipura.

- 1. Bandipara to Traghal, 113 miles. There is a good road up the middle of valley 2, finite to the Badkal bridge at Nonarram, whereis the Supply and Transport official. Two miles on from here is a spar up which the road goes weeping to the left for three miles up the nullal, great turn to the right round the face of the spur, and finally to the left to that the number of the property of the pr
- A direct short out, rough and steep, leads of § mule from the bridge on the left through Knalpura village, and then standing the multiple that it is 3 miles up, but by the read of § miles from the foot. The ruling gradient is 1 in 10. At Traphal there is a good rest-door, heigh 5,100 feet. There are other latt. Traphal is a pretty little mendro on the shoulder of the mountant, inhebelded in pane forest; through which planyes of the Waler Lake, of Hara multi- and the Fir Parigh ranges are obtained, getting grander as one seconds. Good water is brought by pipes from a higher mag. The water empty; is scarty. No supplesswere obtainable at Traphal. Half-an-hour higher up is Halfanhan marg suitable for comping.
- 2. Traphi to Geral, 13 miles from B. 242.—Wholing up through the focast the road emerges at 10,500 feet on the ered of the greasy rings which is then followed up. Thu is the Ramascusz Pass, of which the highest points, 11,600 feet, is five miles beyond Traphal. There is a felter but here and also two miles beyond at Safedpatthen, where the road descends again more steeply in algangs. At the foot is Zoskusa, 3 miles down, and 2 miles further is the new read-house at Goral, There is now no real-house at Goral, and an analysis of the state of 1919-20. Show lies in the wangle before and the year.
- 3. Geraf to Gurnh, 16 miles; from B. 40.—Stilldescending the grassy valley it is 5 miles to the bridge at Kanzalwan and 32 miles to 3 falik Kadal bridge which collapsed 1015. Kanzalwan bridge rebuilt 1916. Old road on left bank used to Gurnis through forest, moderate ascent and descent rough and slippory in ruin.

The main road was on the right bank, on which at 41 miles is a bridge (Wamper). Two miles further is a bridge by the Fort now rebuilt as office of Nath-Tahaildar and police chauki and the dak bungalow is half a mile further.

There is a post and telegraph office one mile below the Fort. Gurais is about 7,800 feet above the sea, and has a pleasant summer climate though not very bracing.

The splendid limestone mass opposite Gurais (north) can be climbed. up the nullah in its face. It rises to 14,000 feet, the still more conspicuous pyramid at the east end is an easy climb from Cherwan, and the pass to Titel. (Author, 1907).

There is a hill path behind Gurais leading to the Bandipura nullah. The Tilel nullah joins in a mile or so up.

 Gurais to Poshwari, 15 miles.—From Bandipura 55 miles, height 8,500 feet.

Two miles from the bungalow the path enters a narrow valley; and two miles further it crosses to the left bank. Below this, Chowan bridge on the left is Sonawan, from which the bridge-path to Tille crosses the high ridge. See routes 28-24. A mile on is another bridge, the read again crossing to the right bank. Two miles from this are the huts of Zain; and one mile on is Bangla, formerly the stage. The old path to Kamri diverged near here, but the new track is now two miles on. There is a gradual assent and then descent to cross side tormat. It is 31 miles from where the paths diverge to the bungalow at Poshwari—two rooms with bath-rooms.

 Poshwari to Burxil Chauki, 11 miles; from B. 65 miles, height 11.740 feet.

At 41 miles the road turns a corner into the more open grassy valley of Minimarg. Here is the highest Imperial telegraph station in India and a small village 9,300 feet.

Turning left, it is 0 miles gradual ascent to the Burzil bungalow. The Deosai route to Skardu turns off here, see page 156. This march is dangerous with avalanches in Auril and May.

6. Burzil to Chilam, 17 miles, from B. 83 miles.

It is a rather steep and then gradual ascent to the Burzil Pass, 13,000 feet. It is long blocked with snow in winter, though dak runners struggle through.

At 5 miles is a stone rest-house; a long gradual descent follows; after 5 miles is another stone rest-house, Sardar Kothi, from which it is 6 miles on to the bungalow.

Chilam to Gudhai, 10 miles, from B. 99 miles.

Still descending it is 4½ miles to Das bridge, there is scanty cultivative the valley contracts and becomes less tertile and more rugged, Three-and-a-half miles on is Krim polo-ground; then 8 miles to Gudhai bungalow. Here turns off the Alampi La route to Skardu, page 168.

Not far from this, by ascending the hill on the right a short distance a very fine view of Nanga Parbat can be obtained.

8. Gudhai to Astor. 17 miles. from B. 117 miles.

Seven miles down is the Upper Naogam bridge; then author; then turning a corner the river joins the Astor river, which is crossed by the Gurikot bridge; a steel cable suspension one 190 feet span, above which on the left bank is an inspection bungalow, P. W. D. Then the read ascende 600 feet. It is of alles to the bungalow, post office, telegraph office, and pologround at Aston. The fort is a mile further. There is a candomnest and buar. The Glight Residency has aromor quarters on Runn marg, afer miles up the bill from Astor. Political Agent's that here. Biss very pretty Alpine place. There is a Tahsildar in civil charge of the Astor district.

Retracing our steps, we will follow KAMRY PASS ROUTE from Gurais to Astor. It diverges near Bangla on the other route.

Gurals to Kamri, 15 miles.—From near Bangla steady zigzag ascent to Kamri bungalow. No supplies. The scenery is fine.

- 5. Kamri to Shankargarh, 25 miles,—Cross Pass 14,100 feet. Fino riew of Nangs. Parint. Descend 700 feet to head valler, then gradual on the grassy alopes. Good bungalow at Kakpani, 14 miles from Kamri; no supplies. Then more level grassy stretches to long but, not fit for habitation except in montrever; no nurnies.
- Shaukargarh to Ratu, 10 miles,—Steady descent; one or two hamlets, a few trees. Bungalow, no post nor supplies unless the troops are encamped here which does not necessarily happen every summer. Height 8,400 feet.
- 7. Rain to Astor, 21 miles—Get some fine views of Nanga Parbat, pass Mons and Chagam. Then cross the Ruyla Inida. The huge grantic boulders in the moralmet testify to the enormous glasters which student to the left to tends Nanga Parbat. The swift choosate-coloured towrent is eroused by a wooden bridge. A rough past turns off to the left to Chartis, a beautifully stanked village, and some 3 miles further is Tranking, a village surrounded by Alphan pastures and close to the foot of the glasters immediately above which the vast precipies and towering anony dome of Nanga Parbat rise towards the seatth. The glasters seem to have advanced of recent wars.

The river from the Rupal nullah has tunnelled beneath the ice and the crevasces have closed owing to the obstruction of the opposite cliffs.

There is a peas at the head of the Rupal nullah into Chilas. The Marau pass, 17,000 feet high, crossing the west spurs of Nanga Parbat, Part of the Kashmir army crossed it in 1855.

It is crossed on the second march up from Tarshing.

- 8. Tarshing to Buner, Chiles.—3 stages.
- To Kaonagod—14 miles up Rupal nullah.
   To Zamalbazi—12 miles cross pass.
- 3. To Buner-10 miles, village.

Here join route by the Barei Pass to Chilas.

Nanga Parbat (26,669 feet) is the culminating point of the Kashmir ranges, and is, in some respects the grandest mountain in the world. Though linked with the central chain of the Himalayas, it is turned at right angles to the general axis, and is parallel to the Indus where the latter takes a decided bend southwards. It is seen from the Murree hills over 100 miles away. At its foot are large glaciers. Those on the east descend into the Rupal nullah to a level of about 9,000 feet,

As none of the mountains around Nanga Parbat and detached from it exceed 17,000 feet, it is seen unobstructedly from all sides. Seen from Gor on the Indus a sheer height of 22,000 feet is visible within a distance of thirty miles. From the usual passes into Astor 16,000 feet vertical is seen.

The outline and grouping of this great mass, rising glistening white with pinnacles of ice, and dome of snow above the dark lower ranges just as some huge murble cathedral rises above all meaner buildings is a sight never to be forgotten.

King amidst kingly mountains, Monarch o'er snowy height, Girdled with glacial fountains, Fenced by avalanche might. Battlements towering skywards, Pinnaeles glistening bright ; Who shall dispute Divamir, The crown that is thine by right ? A. N.-1887.

The death of the gallant Mr. Mummery in 1895, with two Gurkha guides, marks the dangers of these inaccessible peaks. They were probably swept by an avalanche. The weather conditions of Nanga Parbat (Divamir are soldom favourable for many consecutive days. The climbers attained no great height, The conditions in the Karakorum are far better for ascending to the greatest heights. Dr. Norman Collie states that in July 1895 the weather on Nanga Parbat was very favourable.

Below the Rupal nullah the road is taken along the face of cliffs by some new rock cuttings; it is 61 miles from Rupal bridge to Guirkot village, thence a mile to P. W. D. bungalow where the Kamri route rejoins the Gilgit road, which we re-

sume for Astor (see page 171).

There is a new road from Astor to Ramghat which does not touch Dashkin or Doyan, and saves 6 miles. If necessary camp at Mishkin 17 miles from Astor.

Astor to Dashkin, 14 miles : from B, 132 miles, height 7,800 feet. In summer the marches beyond this are hot; the mountain sides barren. At 11 miles is Harcho bridge, and another a mile lower down, then a rise to the little village on a plateau. There is a waterfall near

bungalow at stage. 10. Dashkin to Dayan, 11 miles; from B. 143 miles, height 7,800 feet. Four miles through the Mushkin forest with cold clear streams, then ascend to a corner whence a fine view, then steep descent to stage, and bungalow at stage.

11. Doyan to Bunit, 18 miles; from B. 161 miles.

The Hathu Pir, with a signag descent of 4,000 feet, has to be traversed. Road sometimes impassable. A trying journey, especially if hot; in summer the heat is fierce. It is 11 miles to Ramghat bridge and thence 7 miles to Bunji bungalow; there is also a post and telegraph office.

12. Bunji to Pari Bungalow, 17 miles, from B. 179 miles.

Bunji is on a sandy waste, formerly used as a convict settlement. It is 7 miles on to Partab Singh bridge over the Indus. A fine structure of 320 feet span. Formerly there was a ferry here. There is a winter route along the Indus to Skardu. In the cold weather there is a ferry which crosses the river just above Bunii. This saves 3 miles to Pari Bungalow.

Some miles down, south of Gor, is the side of a huge landslip in 1840. It blocked the Indus back for six months, and the lake formed extended to Gilgit. The dam gave way at last with great rapidity and a most destructive flood swept the whole valley down to Attook. A Sikh army is

said to have been overwhelmed on a plain below Derbend.

A direct route from Bandipur to Chilas branches off from the top of

the Rajdiangan Pass, via Khel and the Barai Pass.

From Chilas the road proceeds as far as Leychor where the Indus has been newly bridged, it crosses to the right bank and goes via Thalish and Partab Singh bridge and thence as before to Gilgit.

A new road now leads down the river to Obilas, joining the main road at Ramghat bridge. (See route 20).

It is 6 miles from the great bridge to the middle of Dak Pari ; thence 4 miles on to the bungalow. It is a desert region, with fierce heat in summer and sandflies.

13. Parl Bungalow to Gilgit, 18 miles.

It is 9 miles to Minawar village, 7 miles on to Jutial barracks and 2 miles to Gilgit, where is a post office, telegraph office, fort and several officie l'a houses.

The Political Agent resides here in winter, and there is quite a little colony of English officers.

GILGIT.

The country is a barren one, with lofty precipitous mountains, narrow rocky gorges, swift glacier borne torrents, and only narrow strips of cultivation around stone-built villages. It is, nevertheless, of no small political importance,

Up to 1812 neither Astor nor Gilgit had been annexed by the Sikhs. At that date an invasion from Yasin drove out the former rulers of Gilgit, who appealed for help, to the Sikhs : a few regiments were sent and the Sikh commander, Nathu Shah, occupied Gilgit, and married the daughters of the Rajas of Yasin, Hunza and Nagyr, Since then the history may be briefly summarized. In 1817 a raid from Hunza was followed by an invasion of that country; it was unsuccessful, and Nathu Shah was killed.

In 1852 Gilgit was invaded from Yasin, a large relieving . force from Astor was annihilated, and the garrisons were mas-

sacred.

In 1860, under Devi Singh, the whole country was reoccupied, and even Yasin overrun. A punitive expedition to Hunza in 1865 utterly failed, and the tribes around Gilgit again rose. The fort was invested, but reinforcements arrived and the besieging hordes broke up.

Darel was then invaded. Since that time the Dogra ascendancy has been undisputed, although the Hunzas more than once gave trouble, and even captured the frontier fort of

Chaprot.

This was fully avenged by the very successful expedition (1891-92) under the orders of Colonel Durand, which captured Nilt by assualt, and, in spite of glaciers, precipices, and a brave foe, stormed the sangars beyond, thus turning the flank of the defenders; then pressing on captured the whole country without further fighting, thus reducing all opposition up to the Pamir and Chinese frontier.

This was followed up by the brilliant conquest of Chilas by

a mere handful of troops under Sir George Robertson.

Astor, Gilgit and some of the countries beyond are inhabited by a race termed Dard, and classified by many ethnologists under the name Galcha. They are of Aryan type.

There are considerable local differences, but, as a race, they are of medium height and strongly built. Their features are long and oval, head doliocephalic, nose strongly curved, expression rather fierce and simister. Some few are of fair complexion and light eyes; but they are not so fair as the Kashmiris. They usually wear dark woollen clothes, with a

peculiar cap made of a beg with its edges rolled up. They are an independent and bold race, more straightforward than the Kashniris and less blood-thirsty than the Fathan. All are Muhammadans except the tribes of Kafuntan, Some of the districts bordering the Indus are republics. Communication with Badakhahan is easy by the Darkot and Barogil Passes, which are the lowest depressions in the great Hindu Kush and Karakorum chains, from Bamian on the west to the unknown passes of Thot on the cast.

The country, however, is of such an unfertile and difficult character as to be only practicable for small hodies of men. Some of Timour's hordes entered Chitral from the north, but none but Mongals and nomads could have done so.

### HUNZA AND NAGYR.

Protected by giant mountains and unfordable rivers these tribes lived in security on the banks of the Hunza river. Numerous well-cultivated villages are scattered about and are most charmingly fertile. The former Chief or Thum of Hunza sent manuders across the Kilik or Shimshal Passes, who attacked Yarkand caravans. Frequently the two tribes would fight one another, but cocasionally combine to raid the Gilpt district. They are now tributary to Kashmir and a British officer on political duty resides in Hunza. The people seem well content with a peaceful administration and just rule which interferes little with any internal affairs.

Tribal levies were sent to Chitral in 1885, and were loyal and useful. The population of the whole valley does necessed 15,000 and is fairly well off. Wheat, barley, millet, &c., are grown, and many kinds of frait. By religion the Gramas are Mahammadans of the Mulei seet; the Nagyra are Shins.

Some gold is found in the rivers.

The routes from Gilgit to Hunza, Nagyr and to Gakuch are given in the tables.

Kashmir to Aster via Gagal.—(Ward)—Kanzalwan is the point of divergence from the main road to Gilgit.

Kanzalwan to Thaobut, 9 miles.—Pass Bagthor.

 Camp, 10 miles.—March 2 miles up the Gagai branch of the Chota Gagai, and camp under puss. Difficult going owing to the water across track. 3. Camp, 6 miles.—Cross rather high but easy pass, eamp in Rehart gien.
4. Lohiahada, 6 miles.—A short march down ravine, then ford.
Kamri stream to main road. (See p. 171).

The district on the Kishenganga river below Gurais is called Drawa. The valley is throughout narrow and seantily populated, and with inferior paths. A path, in places high above the river, leads from Gurais via Shardi to Muzaffarabad. There is a small amount of traffic in summer between Khagan on the west and Kashmir which crosses the lower mart of the valley near Charkot.

Another route from upper Khagan and Chilas crosses at Shardi, vide Route 22b. A very direct route to Chilas is viz Khel, and was traversed by the author in 1896. The stages are as follows:—

1. Alsu to Dewar, 12 miles.—Five-and-a-half hours. Cross low

ridge Into Lolab Valley.

2. Dewar to Krurus, 14 miles.—Five hours through the Lolab.

arrange for coolies and supplies for 14 days.

3. Krurus to Camp, 18 miles.—Eight hours.—Cross a ridge 10,000-

feet, descend wooded valley.

4. Camp to Duch, 9 miles.—Three-and-a-half hours. A Gujar villago in Mat-il nullah; cross and recross the stream.

5. Duch to Khel, 15 miles.—Five hours. Descent to Kishanganga river, cross and follow down right bank.

 Khel to Morl. 15 miles.—Six-and-a-half hours. Ascend the pretty Khel nullah; at 22 hours pass Domel, from which a hunter's path leads to Mir Malik nullah and Astor. One or two huts, the last habita—

tions.

7. Mori to Camp, 18 miles.—Eight-and-a-half hours. Pass at 10th mile Kalan rock caves, then accend 2,000 feet to Barel Pass, 14,600 feet, steep deecent (snow in September), and follow down valley, a goatherd's hut.

8. Camp to Polol, 10 miles-Five hours.-Pass a lake, then steeper

descent to village.

9. Polei to Hallalah, 8 miles.—Two hours. A level but bad nath

along Pari. Good camping ground. Supplies obtainable.

10. Hallalah to Bunar Parac, 12 miles.—Three hours. Steep ascent for about 2 miles and thence steep descent to Bunar Parac where there is a small bungalow.

11. Bunar Parao to Chilas, 16 miles.—Four hours. A good road on left bank of Indus. No trees or shade and very hot in summer.

12. Chilas is on the lefs bank of the Indea 3,700 feet above see level. There is a modern fort occupied by two companies of the Kashmir Imperial Service Troops. Here is the residence of the Assistant Political Agent. There is a direct read from Chilas to Abbottabad via the Babusar Pass. (Sea reute 21, news 219).

### APPENDIX I.

### RULES FOR VISITORS TO KASHWIR.

As those are numerous and frequently altered, it is not advisable to print them here in extense. Copies can be obtained on application to the Motamid Darbar, who registers the names of all visitors.

All matters connected with Kashmiri servants, boatmen, etc., should be referred to him.

An abstract of some of the chief rules may be given as follows:—

 Passes to visit Ladakh must be obtained from the British Joint Commissioner.

- The Banihal route is now open to motors. The other ordinary routes open to the public are by Murree, Havelian, Pir Panjal and Poonch.
  - Special passes are required for Gilgit.
  - Visitors may not occupy houses in the town of Srinagar nor camp in certain specified gardens.
  - If carriage is required, thirty hours' notice should be given. Carriage and supplies may not be demanded except at proper stages.
  - 6. Visitors are requested to see that their servants do not import articles for sale on which duty is leviable. They are also responsible that their servants discharge their debts before leaving.
    - 7. Uniform should be worn at State banquets.
  - Certain preserves are fixed for game in addition to the private jagirs.

Licenses for shooting are necessary, and there are closed seasons, as well as limited number of heads allowed per gun. The detailed rules can be obtained from Major Radelyffe. Fishing is prohibited in all sacred tanks and between the first and third bridges at Srinagar.

Special fishing licenses are needed for the lakes and rivers.

There are also special rules with regard to the occupation of quarters at Srinagar or Gulmarg. For details the official rules should be consulted.

## TARIFF OF BOAT HIRE.

The hire of a first-class dunga with crew is Rs. 45 per mensem. The crew should consist of at least four persons, women and children over twelve years of age to be considered as ablehodied members of a crew.

The hire of a shikari is determined by the number of the crew, who are paid at the rate of Rs. 7 or 8 per mensem, and Rs. 2 for the boat. When boats are taken out of Srinagar, boatmen are entitled to rate at the rate of half-an-anua per man per diem. Rule 57 I-A should be consulted.

## TARIFF OF DUNGA HIRE BY DISTANCE.

Rs. A.

From Baramulla to Srinagar, per boatman .. 1 0

From Srinagar to Baramulla, per boatman .. 0 12

From Srinagar to Islamabad, per boatman .. 1 0

From Islamabad to Srinagar, per boatman .. 0 12

From Srinagar to Awantipur, per boatman .. 0 8

From Srinagar to Ganderbal for the trip .. 1 0

When boats are ordered from Srinagar to meet a visitor at any place, half hire of the boat from Srinagar is payable in addition to the fare to the place where the visitor is proceeding. When a boat is not used on the date for which it is ordered annas eight per diem is payable for detention.

# TARIFF OF HIRE OF COOLIES, PONIES, &c.

I.—In all localities in the territories of His Highness the Maharaja of Jammu and Kashmir the standard rate shall be paid for the hire of coolies, ponies, &c., except where otherwise specially provided. II.—The standard rate in the said territories is as follows :—
For coolies ...4 to 6 annas per stage.

For coolies ..4 to 6 annas per stage.

For kahars ..8 annas per stage.

For riding ponies ..1 rupee per stage.

For baggage and servants

ponies ..8 to 12 annas per stage.

For vaks or bullocks ... 8 annas per stage.

A coolie's load is 25 seers, and the load of a pony, yak or bullock is 80 seers. For unofficial stages, coolies & anna per mile, baggage ponies one anna per mile.

Travellers must provide, at their own cost, all ropes required for securing their baggage.

KASHMI	R GLACIERS.		

Some of the largest glaciers in the world are to be found in extreme north of Kashmir, such as the Siashon, Balton, Bafo, Hispar and Choga Longma. In the middle range, especially around Nanga Parbat and Nun Kun, there are also large ones.

In Kashmir proper, i. c. the watershed of the Jhelum, there are a few small ones such as Kolahoi. And on the southern side of the valley in the hollows of Tatakuti and Brahma Sakul

there are permanent beds of nevé of considerable size and depth but not properly denominated glaciers. Of very recent years the subject of glacial movements has been receiving study by a Commission International des Glaciers, and the Geological Department in India is taking it up. In Kumaon and Lahoul some surveys have been made; but the most important work was done by Mr. H. Haydon in Nagyr. Apparently in most parts of the Himalayas the glaciers fluctante in size, but the alteration of a few hundred feet is spread over long periods. But in Hunza and Nagyr the phenomenal, I may say unique, movement of some miles in a few months has been attested by reliable witnesses.

My information (September 1906) was that the Hassanabad glacier had advanced 6 miles in three years, the advance cach year being between the beginning of Jume and end of August, and being greatest in 1905. This modifies slightly the statements, made to Mr. Hayden (Geological Survey of India, Vol. XXXV, part 3, page 135), and seems more probable.

The local appearances quite agree with the statement of the Wazir, that 40 years ago the glacier was as far or even further down the valley. And it appeared to me that in geological time the glaciers from Hispar and other lateral valleys of the Hunza river extended some miles below Aliabad, and that the plateaux on either side of the river, now so richly cultivated, are mainly angient moraine.

The Yengutsa glacier above Hispar village has also advanced above two miles since it was mapped in 1992 by Conway. This work of surveying is far too extensive to be teken up thoroughly by the geological Department. And it is one in which travellers and sportmen can render vulnuble help. It is officially suggested that photographs (with the camera level) should be taken from some marked spot near the anout of any glacier. A cair may be built and a rock marked by chiest or paint, especially noting the ice cave where the sub-glacial stream escapes. There should be some easily recognised landmark in each photo. Any measurements, or simple plane-table survey of the snowt would much enhance the value of a report.

### STATE DISPENSARIES.

At most of these there is a good supply of ordinary medicines, and an Indian doctor,

Jhelum Valley Road.-Muzaffarabed, Uri.

Kashmir Valley.—Baramulla, Tregam, Sopor, Bandipur, Islamabad, Shupiyon.

Gity.—Main Hospital, Diamond Jubilee Zanana Hospital, and two branches, Gulmarg in summer.

Kishenganga Valley (West).-Titwal.

Jammu Province (West)-Mirpur, Kotli en route to Punch.

Pir Panjal reute.—Bhimber, Naoshera, Rajaori.

Akhnur.—16 miles N. W. of Jammu.

Hamlrpur,-30 miles W. of Jammu.

Jammu,-Town Hospital.

Riasi.—36 miles N.

Udhampur,-2 stages N. on Banihal route.

Ramban.—4 stages N. on Banihal route.

Banihal.—

Rastern District.—Kathua, Hiranagar, Bosohii, Ramnagar, Bhadrawah, Kishtwar, up the Chenab Valley, Doda Padar or Athaoli, cast of Kishtwar.

Ladakh Province.—Kargil, Leh.

Baltistan,-Skardu, Khapalu.

Astor.-Rattu, Astor, Bunji.

Gilgit .- Gupis, Nomal, Chalt, Hunza-Nagar, Gilgit.

4	Dharmsal, s.c.		10	Cross low spurs and stream.			
ō	Sialsui, s.c.		10	Cross a high ridge.			
ā	Rajaori, b.s.c.		14	Join Pir Panjal Route (see page			
u	Majaon, D.s.c.	•	N.	27). There is a hill path from here to Kotli, Route 3, stage 6.			
14	Srinagar		95				
	Total		1731				

## ROUTE 2 (b).—Jammu-Riasi-Gulabgarh Pass, Islamabad.

# Map No. 29.

A.—Note on the route.—Village names are given to are as including many hamlets. The village name is not enough to locate the halting-place. Hence great difficulty in following the Guide-book's accounts, and hence also the appearance of wild confusion in the Survey map. Distances very difficult to estimate owing to nature of road. Though very hard for ponies it is not impracticable at all; but coolies are almost always employed.

Miles.

 Jammu dak bungalow to Jammu Mandi Jammu Mandi to Nogrota (Udhampur) cart road
 Banihal, passing at 9 miles Thandapani

 Banihal, passing at 9 miles Thandapani the usual stage, named from a fine deep well. Hot work along streambeds in low flat valleys and over dry ridges

 Rieti—Down ralley, through and through stream to Chenab at 5 miles (village Ders). Then up bed, very hot to pabbar, 10 miles. Ford Pabber Nullah, and pass along elift, then through fields and a fine mango grove. Wide and difficult, ford Anji Nullah (survey map., Dooda stream), Riesi

just beyond; fine fort and meidan ... 4. Arnas.—Very hot, long climb to Salal Fort on ridge, 7 miles, long descent to bridge at Kanthan. road so far good. Thence a track down right bank of Chenab. 2½ miles more, to mice village and camp. View of Konsa Nag range up An Valley ...

5. Kand hamles, in Thru village (not any of the Toorcos of the map but between and north of the two northern most marked). Steady ascent, steep near end, rising from 1,800 feet to 4,000 or 5,000. A steep stope at Kund, one bad camping-ground, and roofs

12 May be done in two stages— Thandapani, Riesi.

14

6. Hamlet in Shajru [Survey, Sarjern, but probably wall N. R. of the north-termest marked there). Easy descent to Stara Nellah bottom, I mile. Crossing may be had, a tree was thrown across in 4 hours' work. A very steep assent, adding in better grade about 3 miles, but again turning to rough wet seesat, tracks and etwans indistinguishable on Khad. Campon noots, very steep hillide. (Other road to Sahar, presumably that shown on man, was add to be in-

51

Miles.

7. Sakar group of hamlets overlooking Ans Valley. From Shaip: aver ridge and along, behind longer, avent by Kalwa (Gujar camping place) on to high ridge and along it poorbly Kalo atation of aurvey map is paved. Stoop drop into Serial Nullain, smaller than Slasu, cross by tree, camp 1 mile furthee at a granary and roofs.

practicable).

7

8. Aspråla—(Map Angell also Guldes). Chub ridge above village to a andile where pony-road direct from Serni Nullah cressing joins (used if not stooping at Schur). Up and up over appur, behind which is Kharaf Nullah (Gulabgark stream) far below. Mostly down hill, thence to Angrala through kiln forest. Camp on roofs, steep hillisde, roce and mate fields

6

9. Desci-Path round through woods above cliffs, then skeep half descent to bridge. Stream and to be impassable for days in Sood, a fine torrent, with precipious gorges. Evcoedingly stiff raso opposite for 1,800 or 2,000 or 5,000 or 5,

61

 Arital (1)—Partal, Survey and Guide (page 67). Over high steep ridge 2 miles, left through oaks and slong Khud to a zigzag descent, Kindorah at bottom. A seattered Gujar village, no camping-ground visible, maize fields. Here strike main stream again and cross several affluents to a Guiar hovel and damp camp. Exactly opposite stream from head of pass falls in a fine series of enseades. Scenery really good for first time on

journey. Muli Peak visible

11. Nandmarg-(Nandimarg or Nan Marg) over Pass 12,530. Fine and peak of the Konsa Nag Brahma Sakal range, at valley head on left. Chmb steep, passing through a wrecked fore-t high up, then emerging on great open slopes, dreary but easy going to actual pass (of much geological intere it. see Record Geological, Vol. XXXVII, Part 4, page 288 et seq.) U miles. View mediocre and confined. Short cut from Pass to Nandmaru omitting Gogalman diverces immediately, choice of two halting places. one just below steep descent at, say. 10 miles, the other at far end of Nandmary, a straggling impalpable village 2 miles long. Here mo-qui-

toes legion (over 7,000 feet) 12. Kulgam Gentle descent through Hanjipur (124 miles) to ford of Veshau Nullah (bridge at ordinary times ') Enter the oven valley. Road good

and largely level. 13. Khanbal-(Islamahad P. O., one mile. beyond).-Good valley road with willows. Cross Veshau: bridges here and at Khanbal. Last 2 miles beautifully shady. Bonts

Wiles.

8

14

Total distance 1174

B .- A cross route from this to the Banihal route, joining at Ramsu stages given :--

1, Budhun (Survey Wooden; one of them); 2, Gul (headquarters of whole Gulabgarh Sub-tabsil); 3, Dulwa; 4, Sangaldan; 5, Sumbhar-Harog ; 6 (in Ramban tahsil), Sarbagni ; 7 Ramsu.

C .- A cross route from Riasi to Rajacri on the Pir Panjal route :- 1, Peni (crossing Chenab by Talwara ferry); 2, Thandapani (another one);  Dharmania; 4, Sialsui; 5, Rajauri. Marches mostly 9 or 10 miles, one about 14.

#### GARHAL PASS.

The following is an alternative to the main route by the Pir Panjal

see page 29 :-Aliabad Serai to Biloh.—Camp I mile from serai on left bank of stream

coming from last: march up left bank 6 mules to Nandam Sar, a lake frozen till July: grand scenery. One mule on to pass 13,080, then? miles along the divide, south edge, grand views of chatast plans, pass little lake 2 miles descent to Blob camp near stream: total 12 miles. No supplies. Bilds to Garhol.—Slight ascent, steep long descent, anarly 8,000 feet

Bilok to Garhal.—Slight ascent, steep long descent, nearly 8,000 feet in 5 miles, then more gradually 2 miles to Garhal. Not fit for laden ponies.

Garhal to Rajaori.—A rough descent following valley to Rajaori.

about 9 miles. These two stages might be done by lightly laden cookes in one day. Supplies scanty.

It will be seen that the tremendous ascent on second day would be trying if going towards Kashmir

Rajaori to Aliabad Serai another route,

"After crossing the Rattan Pir, at its foot the path divides. The left treat (east of the Fir Panjai) passage Nif Eur, leach to the Garhal Pass, 18,000 tect. Just beyond the passes Nandam Sur, a lake a mule long and half an itle wide, in which the Laddi river takes its origin, and runs down log into the Rambhara, a strem an little above Alisand Sensi, about sixteen miles distant. The other track crosses the Garbal pass, about five miles on the east, at sheight of 13,405 Sect. Gues to the Pass is Bhag Sar. The Ramptruver rises at this lake, and jerns the Bambara stream, opposite a varactowur, about four miles below Alibads Sens. The track from Bhag Sarleads down the Eugri ruillah for seven or eight miles; it then crosses the high ridge, as different heat for the Sarlead Sens." This route would not be open before June. (Sep. 2) and (Sep. 2) and. (Sep. 2) and.

### ROUTE 2c .- Jammu-Rajnorl.

 Akhaur, cartroad, ferry across Chenabat end of March. Small town, fort, rest-house, tahsil, &c.

(Domana canal bungalow half-way.)

 Chaukt Chaura.—First over stony plain, then a long distance up stony torrent beds and ravines amongst the low falls, cross a low ridge and get into the sandstone country around Chauki Chaura at the loot of Kall Dhar hills. A rather long march, 44 hours.

3. Thendepant.—Ascent to Akhargali to cross Kali Dhar range views rather disappointing ; rough descent to Eatot, and on through broken country to Thandapani, a stage on the Riam-Rajauri route. An average

march.

(A new road has been surveyed on this route, but there are no signs of its being made. The present road is a rough one).

### ROUTE 2d-Riasl-Pont.

 Poni (cf. Route 11, march 3, where it is called Poun). Cross Chenab by ferry, usually with a violent wind blowing down the river and the air full of sand. Todious march along torrent beds and ravines and repeated fordings of small streams; finally a short but steep ascent to the Poun i platen; small town.

2. Thandapani, eas r march.

Thandapani to Rajaori, see Route 2. Route 3.—Jhelum to Srinagar via Puneh. Map No. 20.

	дар 110, 20,						
	Jhelum			Town and Cantonment on North- Western Railway.

	Total	••	1881	

#### Roure 45 .- Rajaori to Kotil.

 Sohana.—Cross the range west of Rajacri; a considerable ascent (2½ hours) and descent (2 hours) mostly through childrest. A long march. and a very bad rocky road, but namble for mules.

2. Khuhijeatta.—Follow the Schano millah down and get into the open but broken country north of the Kali Dhar. An easy march.

 Koili.—Pleasant march, by a good road on the whole mostly through the rings of the chil forest, until the Tawi crossing about \$\frac{3}{2}\$ through. An average march.

(Tahsil, Police Station, Post Office, Dispensary).

Roure 4c.—Kelli te Rurour.

 Thatcohi (Golpur village); road mostly high above the Punch river, and would be easy in dry weather, but oxtremely alippery in wet. Crossing of Tavi (Bahn) may be awkward in raipy weather. An average march. Thatcohi Fort, with a garrison of five chaukidars, is an imposing object on a hill top up the mullah.

 Rajdhani.—Quite a short distance on the map, but a fairly long march, about 5 hours. Considerable descent to cross the terrent coming from Khwas, then long ascent over sandstone alopes through chil foxest. Good views. Through Nar, a large village, beyond which is a high corner overlooking the river; this used to be dangerous but has been improved. After this bare sandstone hills very steep on one face; cross two such ridges, one of considerable height, and so to camp.

3. Nurpur.-First part of march amongst low bare: "pabis."

and along the sandy lands down by the river. Last part easy.

Nurpur has numerous public buildings, district offices, tahsil, police station, jail, &c. It is a considerable town.

Jhelum can be reached in one long march, see route.

# ROUTE 4d .- Mirpur to Bhimber.

Two marches, easy and uninteresting, tahsil, etc. at Bhimber.

## ROUTE 4s.—Bhimber to Akhnur.

1. Barnala.

2. Minawar. 3. Johrian (good canal rest-house).

4. Akhnur.

These are all marches of reasonable length in the plains.

## ROUTE 5.—Poonch to Rawalpindi. Map No. 28.

New road.—This is the direct road from the railway, and the casiest way; road still under construction.

1. Pooneh to Hafira, 16 miles.—Cross suspension bridge, 360 feet long, damaged by flood instycut, under reconstruction, a temporary bridge is meanwhile maintained, cart road on left bank for 8 miles, bridged and drained throughout. Schra—Kolli, road continues from Mindharpur down the left bank, suspension bridgest hladharpur, 310 feet, recrossing Punch river. Inshing generally goodst Ser. Continue 8 miles, cart road under construction; passes Devarandi to Hajira; small mud rest-hut, supplies and cooles avrilable if notice is given to Taheildar.

2. Hajira to Tarar Khai, 11 miles.—Graded ascent, road under construction. Ascent never exceeds one in twieve, and is for 6 miles nearly level, passes Bhomgo, Narwal. Tarar is one mile below and beyond Helan.

3. Tarar Kial to Palandari, 20 miles.—Sixfect road, well graded, small rest-hut, supplies and transport through tahisil only, there are also shops seattered round; and a branch dispensary, on stage the following are passed:—Papinar, Gorala, Lawas, Chomria, Gorala, 2 pine forests are passed, otherwise through outlivation.

4. Palandari Lachman Pattan, 16 miles.—Cart road graded descents native rest-hut, supplies very scarty; there are two shops on each side of the river; but supplies very limited, no coolies or mules available locally.

 Lachman Pattan to Kahuta, 20 miles.—Cross suspension bridge to British territory; bridge road, dak bungalow, supplies and transport on previous notice.

- Kahuta to Sihala.—Station X.-W. Railway, 12 miles, good road (8 miles to Rawalpinda).
- M.B.—Obtain a parassac from H. H. the Roya of Punch for transport and supplies. This read should now be open through for cikin traffic. The Hajirs river will be crossed by a proper suspension bridge. 140 feet span, and a small last will be made at Zarar. The tabell, it is expected willbot taken to Zalandari where sarar will also be built by H. H. the Raja Sakib, another sarai will probably be made at Shahn for the convenience of Pauch vistors.

# ROUTE 6.-Muzaffarabad to Sharda via Kishenganga.

There are two roads running along the Kishenganga river, on each side of it to Karnah, but the best is along the left bank of the river. Reaching Tiwal the river is crossed by bridge on to the right of the Kishenganga. This road goes on to Dawarian where the river is crossed to the left bank, and reaching Dudanyal through the forest it is again crossed to the right bank and then the road goes on to Sharda, which is situated on the left bank of the river. The starges are as follows:

## Map No. 28.

 Muzaffarabad to Nurasiri, 10 miles.—There is water in several places on the way to Nurasiri, but good springs are at Jhamirian and Uthasipani, two to three mules short of Nurasiri, and there is one spring a little beyond it which is handy for those who stay at Nurasiri.

Rurasiri to Panigram, 11 miles.—Good spring water is met within
the way at Chuman and other places, and there as one at Panigram in the
Panigram nullah. There is no camping-ground, tents are pitched on the
roofs of houses.

3. Panigram to Naseri, 10 miles.—There is no spring water on the way, but water channels are in several places.

4. Naseri to Titwala, 9 miles.—There is spring water in the way near Batangi near Alikos, and good running water is met with in several places.

From here a path up Karnah Valley to Kashmir, 14 day up valley

to Jaire (see Route 6 on next page).

5. There is no earning street in the street is no spring water at Jura though it is mot with in soveral places on the way. There is a water channel at Jura. There is no camping-ground, tends are pitched on the roofs of the houses if there are any crops in the fields.

6. Jura to Shahkot, 10 milas.—There is a water channel at Shakkot. There is no camping-ground, bents are pitched on the roofs of the houses or near the river bank. Dallar is a beautiful place between Jura and Shakkot. The Jagran millah joint the Kishendengen river theme. It is no beautiful place and there is a forest house. A road leads to Jagran from there.

One should not miss the beautiful scenery in Jagran when going up to Sharda, From Dallar at a distance of about three miles is Salkhalla. agross the river Salkhalla is the home of markhor.

7. Shahkot to Keran, 10 miles .- Water is handy in most places. There is a bridge at Keran and a forest road leads from it through the

Keran nullah to Shalora in Kamraj.

8. Keran to Dawarian, 10 miles.—There is water in most places. 9. Dawarian to Dudanyal, 8 miles.—Water is plentiful. There is

a bridge at Dawarian. A forest road runs from it through the forest to Dudanyal. From there the forest road leads through the Jumagand

Forest to Tregamin Kamraj.

10. Dudanyal to Sharda, 8 miles .- Water is handy. There is a bridge at Sharda to cross the river. At Sharda is a famous ancient temple. The scenery is fine. For connection sec below.

## ROUTE 6b .- Kishenganga to Kashmir.

## ROUTE 1 .- From Titwal via Karnah Valley.

1. Titwal to Tantar, 9 miles. Steady ascent, good road, many

villages, usual supplies, good camping-ground, height 5,500 feet.

2. Tantar to Jaire, 7 miles .- Steady ascent, last village Nachian, 7,000 feet, then forest, camping-ground below pass, 8,500 feet, no supplies.

- 3. Jaire to Tumni, 14 miles.—Rather steep ascent, 1,500 feet to Nachian Galli, long descent along steep slopes, then forest to Drangiari bridge, 7,000 feet small marg (good camping ground, no supplies or only milk), then on to villages, Zunarishi, or Tumni, 1 hour further, height 6.000 feet.
- 4. Tumni to Magam, 11 miles .- Through cultivation, villages, good nath.

5. Magam to Sopor, 10 miles,-Cross Pohru by ferry or ford near

Wadipore, then 15 miles on a main road.

N.B .- Below Zunarishi stage 3, there is a bridge at Ruri, and a road on left bank to Shalu a 5 or 6 miles, and on to Tregam and the Lolab. vide map.

ROUTE 7.- Jammu to Kashmir via Kishtwar.

	(.Unps 140s, 20—40).						
-	Jammu						
4	Batoti, b. s.		51	Vide Route 1.			
5	Asan, s.	-	16	No bungalow; bad road, ascent and descent follows up left bank of Chenab.			
в	Kullen		15	Rest-houses (bad), at most stages supplies scanty; coolies few.			
7	Bheli		10	auppries southy; coones tew.			

Roure "-concluded.

No.	Stage.		Miles from	REMARKS.
8	Jangalwar. r. c.		14	Joins Routes 8, 9 and 10.
9	Kandani, < c.		13	Steep path, but somewhat im- proved of late years.
10	Kishtwar, s. c.		15	A large and important place; another path via Bhadrawah (vide Roule 8).
11	Moghal Maidan, s. c.		11	Cross Chenaband Wards an river by two bridges; two long steep a-cents (see page 84).
12	Tsingam, s. c.		- 11	ble path, pass Chatra at 5 miles, Camp above forest.
13	Sinthan		5	Cross Sinthan pass about 12,000 leet. Shorter footpath.
14	D00000, s. c.		14	
15	Islamabad, b. s. c.		22	Across low hills, then on level
16	Scinegar		44	(see page 81). By boot.
•	Total	-	233	N.B.—Stages 8 to 10, better path cia Salena, fit for hill postes but rather longer.

This route closes in November. Most of the way is fit for hill ponies but they have to swim the rivers. It is rough road; a personn is needed to obtain supplies or coolies. From Kishtwar better read. ROUTE 7b.

Helbamour to Batoti-Kishtwar road at Khaleni (sec Route 7).

1. Udhampur to Dramihal on the Banihal road. 2. Dramihal to Sud Mahaday on the Banihal road as far as Chineni, there turn off to the right, and for about 4 miles low down along the Tawi by a good cobble-paved road. Then turn up the hill to the left and finally a steep climb by a sigzag path to Sud Mahadov about 1; hours from the Tawi. About 5,750 iest and a well-known place of pligrimage, but with-out any objects of interest. It is in the jagir of the Raja of Chineni.

- 3. Sud Mahadev to Rot.—The path starts alimbing at once, and (excopt for one dip of 500 feet nearly half way up) climbs steadily to the pass about 5,000 feet, reached in 3½ hours. Descent, through forest, mostly about 2 hours. Camp on narrow rice terraces at about 6,000 feet. The path on this march is bad in many places, and sometimes little dangerous oven for a led pony. No snow to speak of early in April 191.
- Rot to Parbal.—A very short march. Down 500 feet to the nullah
  and up about 1,750 feet the other side. Fair path. This is about the
  last village of Marmat, which is a fine forest nullah with productive land.
- 5. Parbal to Saral.—About 4 hours' steady going by a fair path throughout which avoids crossing the mainridge behind Parbal, but rises to about 5,000 feet to cross the end of it; a good distant view of the Kishtwar amows from this point. After this there are several descents and ascents of 400-300 feet but the going is easy. Finally a considerable descent to camp on a spur at Saraf (llaks Ghellion) at nearly 7,000 feet. This is a pleasant march all through.
- 6. Sarsi to Khaleni.—Straight down to cross the stream (Nels Pacha Article 1900) feet. Them 500 feet through Pariot, and along and down the Pariot spur with a bird's eye view of Doda and its fort at the end. Then a long and steep descent to cross Nala Bacha again at \$,800 feet and up a few hundred feet to camp at Khaleni on a plateau overlooking the Chemba fairly warm place in April. This is a moderate march.

(NOTE.—By going straight from Rot down the Marmat nullah to the Kishtwar road, Khaleni could be reached in one march, but it would be long one).

### ROUTE 7c.

Another route from Sud Mahadev to Marmat is via Marothi.

- Sud Mahadev to Marothi.—A small descent, then up about 1,500 icet, a pleasant path, mostly rather steep through woods and cultivation, to a high gap in the ridgetocast, with a very old, but not very big deodar up at the top (14 hours). Then a hot descent of 800 feet to the millab, and the other side to camp on the Marothi ridge at about 6,000 feet or over, About 3 hours from Sud Mahadov.
- Marethi to Dehra.—A short march but a stiff elimb all the way along the Marethi ridge to the top of the range behind, 2½ hours. A led pony can get through with some difficulty; no village or supplies.
- Debra to Bard (Seot).—Long steep descent through fine forest to Behota and on by an up and down path siz Rot to Barl. Path fair (though tiring) except towards the end on either side of Bhawani Khad, when it is in places difficult for any pony. A long march, camp at about 4,600 feet. This village is in the Chihemi jagir.

From Bari, either Asser or Khaleni can be reached in one march.

Compare Route 7.

## Rouge 7d -Kishtwar to Batotic

- 1 Kishtwar to Kandani on the Chenab (Ural numerous on the isolated hill to south)
  - Jangalwar

In the Bhadrawah jagir of the late Raja Sir Amar Singh

3 Bhela Khaleni

All these are easy marches on the whole (contemporary notes not available)

- Khaleni to Asar -About 4 hours steady going The road haidly deserves the name being rocky and precipitous in many places There are many minor ascents and descents and one long and extremely steep spiral descent to cross the Warmat stream close to its junction with the Chenab The latter part of the march is rather bare and hot Camp on fields over looking the Chenabat 3 200 feet Milestone on house miles but it seems longer (lagir of Raja Chineni)
- Asar to Bateti -About 4 hours The road runs fairly easy with minor ascents and descents until it reaches Ansi Dhar where there is a big and steep climb of 2 450 feet to cross the ridge then down steep about 1 750 feet to cross the Chakwa nullah and up the other side 1 100 feet to Batoti The march is short but a hard one for coolies and baggage takes some time

POUTE 8 - Jammu to Kashmir via Bhadrawah not recently Vans Nos 99-46

## ROUTE 8b .- Riasi to Udhampur.

Rissi on the Chenab, 2 miles from Jammu.

1. Rissi to Katra.—About 4 hours or rather less, going easy; several vedep nullahs to cross with steep ascents and descents. Otherwise easy. Katra has a small bacar, but is an empty place except during the time of pilgrimage to the abrine of Trikta Dori in the summer. Monkeys abound. This side of the Trikta hill (the three peaked hill conspicuous from Jamus) is sacred, and no shooting must be done there.

 Katra to Udhampur.—The best way is probably viz Thikri, joining the Udhampur cart road near the 26th milestone, in about 12 hours; Udhampur is about 16 miles on, and the whole march about 22. Except the dip to cross the Jhajiar Khad the earlier part of the march is easy.

A more direct route across country sia Chak Rukwalan saves some miles and is not difficult. May be divided into two short marches at Chak Rukwalan. Some of the torrents cannot be crossed after heavy rain, but this applies to both routes.

ROUTE 9.—Pathankote to Kashmir.

	Pathankote	•	••	Terminus of a branch line of rail, joining the North Western Rail- way at Amritsar.
1 2 3 4 5	Madhopur, s. c. Thain, s. c. Basoli, s. c. Pud, s. Hartli, s. Lohang, s.	:::::::::::::::::::::::::::::::::::::::	10 15 12 13 14	Ferry across Ravi. A smallbown, height 2,170 feet. Cross a ridge. North-West up nullah and over ridge.
7	Camp	••	16	Cross Chatardhar Pass, 10,000 feet.
8	Bhadrawah, s. c.	- 1	14	Join Route 10 or 8.
9	Jaoru, s. c.	•••	17	
10	Jangalwar, s. c.	••	14	
19	Srinagar	4	127	
	Total		200	

There are probably serais or rest-houses, but all inferior, and carriage will be difficult if many coolies are required. Apply for parama to Covernor of Jammu by letter.

## Rouge 9b .- Basohli to Ramnagar.

 Udhampur.—Rether a rough march through broken country, enseling numerous khads—not a particularly long one.
 Sumarta.—Cross high river.

3. Sammabanj.—Camp on the top of the Samnabanj range at about 6,000 or 7,000 feet. A long climb by a rough road, but not a long march.

4. Ramnsgar.—Easy descent all the way.

Tabsil, etc., and "places" of the late Raja Sir Ram Singh.

Note .- Detailed notes not available.

The above route is not open in the winter, when it is necessary to go round through Ramkot, and strike over the hill from Thel, with a long ascent, and descent by a rough path.

## Route 9c .- Ramnagar to Udhampur.

 Chanunts.—A short march through a country of low hills and deep ravines with difficulty.

 Udhampur.—An average march, rough country to Janghanu, a small and decaying town; beyond this cross the Tawi by fording when low enough and on skin ratts when high, ponies swimming. From the other side the rise to Udhampur is casy.

#### ROUTS 92 .- Kathus to Basehl.

 Bazantjur.—An easy march, about 2½ to 3 hours' riding; read stony but not bad on the whole; paw—Lakhanpur Fort, now used as a customs post, a fine solid little building in axeellent preservation, about 200 years old. Ascent at end to Basantpur plateau is steep.

Pleasant camp under mango trees.

Police outpost here.

2. Republi—The first part of the murch as far as the khad marked, Bedio unthe angi, a twice as leng (citiding) as the apparently longer modern eart, owing to the aboundable state of the path in the former, more apparently beginned by the properties of the path in the former, more venning passed by the path of Bedjure marked by the venne and venning passed for animals. Their village and fart—q. Route 9 (2-3)—invigating the in this with a pleasant bit of shady law was a too show the triving single out the life with a pleasant bit of shady law was as too show a steep decent down to the river again after it. Reswires as a narrow teach along the steep, hilleido ovelocking the river. Beyond, after going down for a shart distance into the bed of the Rart, the rout is easy.

Basohli or Basoli is a decaying town. It has tahail, police station,

dispensary, etc.

The ferry over the Ravi is very badly maintained by the Gurdaspur authorities. Improvement in this respect and as regards the Kathua road is probable.

## ROUTS 10 .- Chamba to Kashmir.

# (Authorities : J. KELLY and V. W. SMITH.)

Chamba is reached via Pathankote and Dalhousie. It is a charming valloy, watered by the Ravi with a small town, the capital of the principality. As far as Chamba there are good dak bungalows.

## Map No. 46.

- Chamba to Manjir, 16 miles, 2. Manjir to Bhanda, 14 miles, now replaced by—
- 1. Chamba to Saiuni, 19 miles, 2. Saiuni to Bhandal, 14 miles,—A now and better graded road, which was open up to a little past Saiuni camp in 1908. The road follows the Ravi right bank downwards from Chamba, turns up a side valley in the bed and again up a left-hand ravine, very hot, to a low watershed at the 8th mile, Pari willago. Arrest-house will be built-here. Down a long and rather deep ravine into the very bottom of the Schol River Valley, about 19th mile ; cross bridge and rise sharply after a mile, leaving old road to Manjir and climbing steadily round big ravines to Saluni, a fine airy site on ridge, say 4,600 feet.
- 2. Saluni to Bhandal, 14 miles.—The new road goes almost level along the left side (right bank) of a tributary valley coming from the Padri Pass. The old path, shorter, dips to the stream and crosses by a bridge, then up and down to Bhandal, a nice little but and village.
- 3. Bhandal to Langers, 11 miles.—The same valley still followed, on left bank, right side, very trying ups and downs (alternative through stream-bed once), till Langers hut is sighted in a grand position from near a fine waterfall. A spur divides the valley in two.
- 4. Langera to Thanala, 14 miles.—Substitute over Padri Pass. Dip and elimb the spur, then along it for miles (diversion through strem once) up and down. At a division where a steep sigzag leads to a higher meadow about 5th mile, is the last good breakfast, hilting place before the glem narrows (branch on the lettis followed) and the woods closes in. A shady bit down to ford, and up a ridge opposite looking like a knife lying edge upwards. This is not the pass, as you strike the same strem again immediately on the other sides and follow it to the open passitself about 10,600 -—Hovel and Gujars. Emerge on olge of hill abovo Thanala, desperate drop to within half a mile of camping-ground.
- Thauals to Bhadrawah, 7 miles.—Delightful Sunday walk in pleasant valley. Bungalow at Bhadrawah good enough but for flies.
  - 6-7. Bhadrawah to Jangalwar, 20 miles.—Crossing the stream at Bhadrawah the read olimbs the ridge opposite. This is het and trying butther insis only about 1,600 feet. The path them follows the Janu ridge on the left side for about two miles through fine forcest dopes, when it suddenly turns to the right through agap in the ridge down a small ravine. At the bottom is Jai, a pretty spot anclosed by two ridges. It is not a fact that the proper is Jai, a pretty spot anclosed by two ridges.

## ROUTE IC-concluded.

village, boasting only of a mwegficklene and a small banis's slope. The road turns to the left at die and ellows the right who of the Jaciar ridge alongside the stream, which is a feeder of the Chenab. For a couple of miles it traverese meadow land with wooded hills rising close on either hand. The valley then narrows sudt the attemberomes atoreat. After a steady descent of perhaps five miles the path rises above Jacar village and finally racches the top of the ridge again, where it alone of the light and descends the other ridge to Jangalwar. This is a steady descent of about 3,000 feet.

Camping at Jaora is unconstortable especially in wet weather, whereas idea camping-ground can be found below Jan. It would be necessary to make previous arrangements for provisions, however, as there are no villages near.

A mobile party could do the whole march in a day, and the road is rideable everywhere. Near the point where the road finally turns and descends the ridge a magnificent panorams of distant snow and he fields presents itself.

- 8. Jangalwar to Kandul, 10 miles.—Through the stony ravine on the ridge first, and a mile or two of had rocky path, then better by the Chemb to Tartif P.O. village, and bridge over side stream at its junction. Here sathe turn northwards of road and rive. Except for sud shally corner beyond the next big torrent, ell is now plain suling to Kichtuar. Kandul hovel gives room for a tent on top; village a nay up the hills, here very steep. Codice and supplies had here, forrat officers generally do not ston. The two stages combined are not hard.
  - 9. Kandal to Hishwar, 10 miles—Easy and pleasant march till three miles before Kishtwar side valley takes noad (new sligmming casy grades). In side valley beyond crossing chemara fine spring, and a village just short of which the road runs up the 10 film tigage, rather steep to the Kishtwarspitena. Oldstone causeway will benotled. Pastoright of fort and through beaut to Chaugan beyond town; magnificent chemara and open outlook.

N.B.—There is a tight place 2 or 3 miles out between Blandal and Langers, where postes do not generally pass; otherwise the whole routs would be rideable, only had on the Padri march.

Travellers will do well to consult Hutchinson and Rose's Guide to Chamba (Civil and Military Gazette Press, Lahore).

ROUTE 11.—Jammu to Srinagar via Budil Pass. (Authority: General J. TYNDALE BISCOS, XIth Hussars). Map 29.

8	Narang, s. b	. 14	135	Ditto. Fine forest scenery.	
9	Buta Kundi, b.s	. 10	145		
10	Buranai, b	8	153	Ditto. No supplies till Babu-	
11	Basal .	11	164	Leave forests behind last hamlets; dak hut, blook-house.	
12	Gıttad .	. 8	172	Halt here unnecessary, Lalusar.	
18	Top of pass . Babusar, s. c. b.		180	Lake on left; hut, 11,000 feet. Bungalow; cross pass, 12,715 feet	
10	Daudsak, g. c. D.		100	casy gradient, village, 9,200	
14	Singal, s. c. b	. 18	193		
15	Ohiles .	. 10	203	Fort; P. T. cantonment, 4,000 feet.	

This and other Gilgit routes by kindness of Lieut.-Colonel Medley.

Inhabitants of Khagan Valley very unobliging; difficult to get any supplies. The road is good. Much snow from Baraval to Babusar till mid June. Application for use of P. W. D. rest-house should be made to the C. R. E., Abbotabad.

Route open from July 1st to end of October. Water abundant and usually good.

## ROUTE 22 .- Kashmir to Chilas.

The most direct route is the following: but Shardi can also be reached by following the Kishenganga up from Domel or down from Gurais, also from Shalura by the Pathra Gali. See route 6.

_		Map:	28
No.	Stage.	Miles from	REMARKS.
1	From Sopor to Cho-	16	In the Kashmir Valley the path to Lolab (see page 92).
2	Chogul to Kombrial,	16	So far a good levelroad. This stage is in the Lolab Valley.
3	Kombrial to Camp	About 8	The path now leads north up narrow, grassy and wooded valley on the right bank of the Sochar stream; it ascends gradually, then cross to left bank; camp about 9,000 feet.
4	Camp to Camp	About 10	A steep ascent to pass, about 11,000 fest, with steep descent to valley, camp in upper forest; level.
.5	Camp to Shardi, s. c.	About 8	Ascend north-west, cross steep apur and steep descent to Kishen-gauge by Madmath rullab. Shardi is a small village at the junction Camp in walnut trees. There is an old mud fort, also an anciant stone temple of the Kashmir type. The river is crossed by a rope bridge, and in winter by a wooden bridge.
8	Shardi to Sangara	9	Cross the Kishenganga, then the Sotsuti by wooden bridge, follow left bank; north with gradual ascent; camp; wood abundant.

#### APPENDIX II.

#### MOGHUL GARDENS IN KASHMIR

Refore the visitor comes to Kashmir he should read Mrs. Villiers Stuart's "The Gardens of the Great Moghuls" and visit at least one of the Morbul Gardens in the plams at Agra, Delhi or Labore The Morbuls were great garden lovers and were much handloapped at first by laok of water in India. They distiked heat, strong winds and dust and escaped from these in their gardens. They had to bring water from great dis tances In the earlier gardens the water courses were small, the garden consisted of four square plots divided by straight cross paths, gradually the complicated gardens were evolved with broad water courses, high water chutes, large banks, and Turkish baths Every Moghul garden was absolutely symmetrical, and the water courses were lined with sypresses and other trees. In the suring the gardens were covered with flowers especially with thirty two kinds of tulips, the designs resembled those of a carpet The gardens were emblematic of paraduse and the manives attached mystical meanings to the trees At immense expense the long terraces were constructed, and nearly every garden was longer than at present, the modern roads pass through the lowest terrace which used to be approached from the lake The design of the Shalamar differs from the Nushat, because the former is a royal garden and consisted of a garden for the court nearest the lake and another for the Emperor and the third for the ladies

Akbar, the contemporary of Elizabeth, made the Nasum Bagh

Jehangur, the contemporary of Janus I, made Shalamar m 1819, Ashebhala and Vermes, In purmon muniste and taker m law, Jast Roghatha tha Khabhala Roghatha Khababa Sagh (sais Gardens of the Great Moghnis, Chapters VII and VIII). Divery one should go'de a pusno to Chashma Shah. Beade these gardens there are many runsed gardens aspecanity on the route to Janum (e.g., Bajbekara), in most cases they mark the royal compung grounds until for the convenence of the court to and from the plants

Other gardens are to be found at-

- Nageem, commanding a magnificent view of the Takht from the further end of Samundar Kol
- 2 H agest Bal, where there are eval stone basins carved with figures of fish, ducks and herons
- 3. Darogha Hagh, on Manasbal Lake, built for Nur Jahan.

#### APPENDIX IV

#### RUKHS OR GAME SANCTUARIES

Rukhs are as follows -

- 1 Um
- 2 Hokarsar
- 3 Chashma Shahi
- 4 Dachgam
- 5 Khonmoo
- 6 Khru
- 7 Tral Kuram
  - 8 Achchibal
- 9 Koolgam

There is a public road over the Pastoom Pass through Khru Rukh and one through Iral over the Sangre Dai leiding to Kirrum

Except on these two roads no one is allowed to enter a rukh without permission

This rule applies to all roads which onter the Dachgam Rukh Ao one is allowed to cross from the Laddar or from Ampal or Khonmoo into the Bachgam

The penalties for enturing a rulh are heavy and all screams of vantors are liable to be fined

Permission to enter any rolls is only given under exceptional encounsingular to specific to the Honorry Secretary State, Rulls; who will obtain His Highness orders thereon

PRINTED AND PUBLISHED BY E A SMEDLEY, AT THE "CIVIL AND
MILITARY GAZETTE" PRESS, LAHORE

## CONVENT OF JESUS AND MARY (WAVERLEY). HIGH SCHOOL, MUSSOORIE.

#### ESTABLISHED 1845.

Situated at an elevation of 7,000 feet above sea-level. Its surroundings are univalled for beauty. The School buildings are large and roomy and stand on one of the healthiest, most extensive and well wooded grounds in the hills.

Pupils are prepared for the Cambridge University Examinations.

The School is affiliated to the Trinity College of Music, London. Pupils are prepared for the Associated Board of Music, London.

Excellent Kindergarten School for young children.

For particulars apply to-
